

IRONKEY Secure Flash Drive & Internet Protection

The World's Most
Secure Flash Drive™

1,2,4 GB

SECURE STORAGE

HIGH-SPEED

**30 MBPS READ
20 MBPS WRITE**

WATERPROOF

MILITARY STANDARD

TAMPERPROOF

**SOLID FILLED
METAL CASING**

Meet the IronKey

The IronKey, designed to be the world's most secure flash drive, protects your data, on-line passwords, and Internet privacy. Now you can safely carry your digital life with you wherever you go—with confidence and peace of mind. While it uses advanced security technologies previously only available to government agents and other secret operatives, it is simple to use and requires only a password to unlock it.

Military-Grade Encryption - The IronKey Cryptochip protects your data to the same level as the government's most classified information.

Self-Destruct Sequence - If the Cryptochip detects any physical tampering by a thief or a hacker, it will self-destruct.

Online Security Vault - If your IronKey is ever lost or stolen, easily restore your online passwords from your encrypted online backup.

Stealth Browsing Technology - Surf the Web safely and privately through almost any network, even across unsecured wireless hotspots.

Self-Learning Password Management - Securely store and backup all your online passwords as you go, and automatically log into your online accounts to avoid keylogging spyware and phishing attacks.

Waterproof & Tamperproof - The IronKey was designed to survive the extremes and exceeds military specifications for water resistance.

Who Buys It? and Why?

College students who want to carry their music and photos with them and work on their term papers, use IM, and check email from various public computers.

Business people who need to securely carry sensitive information with them on the road and want to check email by using the hotel's Internet connection.

Any Internet user who has difficulty remembering all his online passwords and wants to securely and automatically log into his online financial accounts.

Any computer user who wants to backup important or sensitive files, either online or to another computer, and wants the backups to be encrypted.

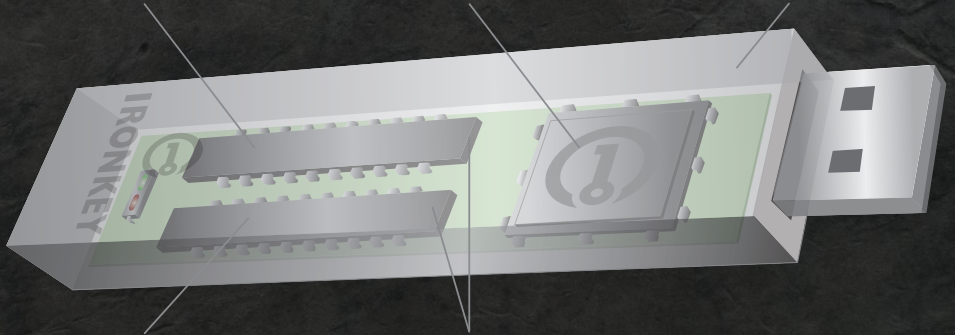

The World's Most Secure Flash Drive™

FAST
Transfers data up to 8 times
faster than ordinary flash drives

SAFE
Military-grade
cryptography

RUGGED
Waterproof & tamper-
proof metal casing

RELIABLE
Stores data up to 10 times
longer than ordinary flash drives

SMART
Secure browser and
portable applications

INCLUDES
Password Manager,
Secure Backup & more

Key Differentiators

Hardware Encryption

The IronKey Cryptochip uses hardware-based encryption, which is faster, more secure, and easier to use (no drivers or installations) than software-based encryption.

Encrypted Backup

If your IronKey is ever lost or stolen, not only is all your data protected from prying eyes, but you can securely restore your lost data and passwords to a new IronKey.

Password Manager

Manage all of your online accounts and passwords in one place with secure one-click direct access and protection against keystroke-logging spyware and other online threats.

Private Web Surfing

IronKey's Secure Session Service and onboard web browser deliver anti-phishing, anti-pharming, and anti-profiling protection by creating a secure network connection from virtually any computer anywhere, even across unsecured wireless networks.

Quality with Speed

The IronKey performs at the top of its class because it uses the highest quality SLC NAND Flash in dual channels, which is at least 4-8 times faster and 10 times longer lasting than the MLC flash found in the majority of flash drives.

Waterproof and Tamperproof

The IronKey's rugged metal casing is injected with an epoxy compound that makes it not only waterproof but tamperproof; it is virtually impossible for someone to tamper with your IronKey without causing irreparable, noticeable damage.
