

BUSHNELL® ONIX™ GPS

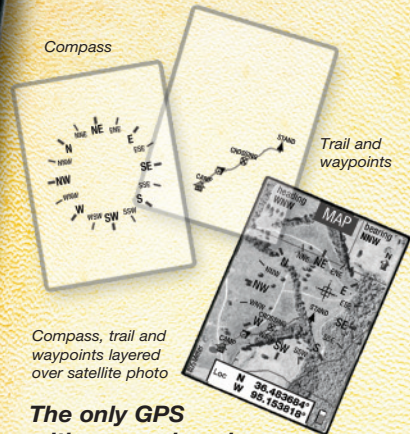

Sometimes one picture
is worth a thousand maps.

Exclusive TruView™ navigation displays satellite and aerial photos.

You can now navigate by visually referencing your surroundings with what's pictured in your palm.

Compass

Compass, trail and waypoints layered over satellite photo

The only GPS with green layering.

The ONIX200 layers a satellite image, aerial photo or topo map, and all navigational aids in perfect harmony on a single screen.

One source for all your photo and map downloads. Log on to learn more about advanced GPS technology made amazingly simple.

Introducing Bushnell ONIX200. The first handheld GPS to support satellite photography. Bushnell-exclusive TruView™ technology displays satellite and aerial photos of your surroundings, so you navigate by what you see – around you and on your GPS. Navigation has never been this fast and efficient, thanks in part to our exclusive screen-layering feature and the ultra-simple interface. The world's most advanced handheld navigation system just made all your paper maps and aerials obsolete. Along with every other GPS. For more info, visit www.bushnellgps.com.
