

# NI-W810CS / NI-W750TS / NI-W450TS Multi-Directional Iron with Curved High-Performance Soleplate

## 360° QUICK™

### A Panasonic Exclusive!

High-tech, sleek, and ergonomic design ensures a smooth and natural movement in any direction.

#### Ceramic Coating\* or Titanium Coating\*\*

The ceramic finish provides a durable surface and the generous-sized soleplate gets the job done quicker. Unlike conventional irons, the 360° Quick™ is designed for ironing in any direction – so there's no wasted motion. Ironing time is shortened so you can move on to other things.

\* 6 times more durable than stainless steel soleplate; compared to Panasonic irons with stainless steel soleplate (NI-W810CS only)

\*\* (NI-W450TS & NI-W750TS only)

#### Multi-Directional 360° Quick™

The revolutionary, multi-directional iron from Panasonic. Unlike any iron you've ever seen, Multi-Directional 360° Quick's unique, "curved, double-point design" soleplate lets you iron smoothly and efficiently in any direction. The soleplate's expansive surface area is ideal for larger fabrics – like curtains and tablecloths, as well as tight spots like collars and cuffs – so you can finish the job up to 25%\* faster.

\*When compared to conventional corded Panasonic irons. Research by Panasonic Corporation

#### Jet-of-Steam/Self-Cleaning

A powerful burst of steam helps remove stubborn wrinkles. This feature also helps clean the iron steam vents.

#### Spray Mist

The push-button spray mist lets you direct extra moisture where needed.

#### Adjustable Steam

Four steam settings can be selected – "high" steam for heavier fabrics "medium" steam for touch-ups, "low" steam for delicate fabrics as well as "dry" for no steam output.

#### Dial Control

The easy to use dial temperature control maintains the selected temperature accurately.

#### 3-Way Auto Shut-Off

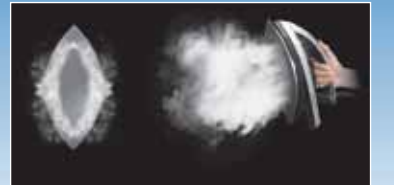

The mercury-free sensor automatically shuts off the iron after 10 minutes if left in the upright position and after 1 minute if left unmoved on its soleplate or if tipped over on its side.

#### Anti-Calcium System

Helps prevent clogged steam vents by reducing sediment build-up in the vaporizing chamber of the iron. (NI-W810CS / W750TS Only)

#### Vertical Steam

With the push of a button, the vertical steam feature allows you to direct an extra burst of steam where needed.
