

ANTENNAS DIRECT® DB8

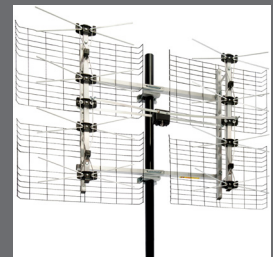

The Antennas Direct DB8 bowtie antenna is designed to target the core UHF DTV frequencies.

With its range of 70 miles and a beam width of 35 degrees, the DB8 is ideal antenna choice for rural installations or suburban installations challenged with pulling signals in through heavy foliage or roofing materials over attic applications.

The design of the DB8 allows for installation options that are off limits for much larger antennas of equal or lesser range. The DB8 comes with the Antennas Direct Lifetime Warranty, which assures you of its superior build quality and durability.

DB8

- SKU# - 8DXB
- Description - Extreme Range, Multi-Directional Bowtie UHF Antenna
- Range: Up to 70 miles
- Beam width: (HorizontalPlane) 35 degrees
- Gain: Max 15.8 dBi
- VSWR: Typical 3.0 or better
