

Vital Receivers

The heart of most home entertainment systems is the A/V receiver. It is the connection and control point, the amplification and processing as well as the path through which all of the sources will pass. At SpeakerCraft we have no interest in entering a category unless we can do it right. With the introduction of our first two receiver models we have done just that.

The Vital™ 910 is a full-featured 7.1 channel receiver with all of the options you would expect from a home theater product at this level. Consider powerful DSP processing including DTS-HD Master Audio and Dolby True HD to deliver the finest sound quality available. Add to that Faroudja DCDi Cinema 1080p video up-conversion from any of its 17 video inputs and you will see picture quality you never expected. All this plus an optional iPod® doc that allows you to view song info via the on-screen display and 130 watts x 7 worth of discreet power and you can stack this full featured receiver against anything on the market.

The Vital™ 710 is an 80-watt x 2 stereo receiver with a high current output stage capable of driving low impedance loads with authority. This is critical when dealers are trying to do more with less and reducing the number of components to power a multi-room audio system can be a real cost saver. A high quality, stable stereo receiver is a powerful tool for any custom installer. Add to this the ability to switch composite video, front panel A/V inputs, pre-amp outs and even a phono input and you have an amazingly versatile machine at a very affordable price.

Designed and built to impeccable standards, the new SpeakerCraft receivers will provide years of impressive performance and ensure hours of enjoyment in the homes.

Vital 910

- Video Inputs - (4) HDMI, (3) Component, (5) S-Video, (5) Composite
- Faroudja DCDi Cinema Up-Conversion to 1080p HDMI
