DOD
LS470W

The DOD LS470W

**1080p full HD dashcam with
Sony Exmor® CMOS sensor
and 10x GPS processor.**

The DOD LS470W dashcam is the next step in evolution for the LS400 series DOD dash camera. Designed to be compact, user friendly and better under low light conditions, the LS470W is an improvement over its LS460W predecessor.

This new model has an impressively high ISO sensitivity of up to ISO12800, making it the best in low light conditions. Further helping the LS470W produce outstanding video is its exclusive SONY exmor CMOS sensor that is now 20% larger than before. The SONY exmor sensor captures all the light from the large f/1.6 aperture and new 7 element Japanese glass lens to produce a clear full HD video. Packaged together with WDR Technology (Wide Dynamic Range), which greatly enhances nighttime recording, and a larger viewing angle of 150 degrees, the DOD LS470W combines all the necessary features to capture stunning crisp HD video on any road and under any light. Also included in this model is the GPS logging feature which has now been boosted to 10x the speed; processing GPS positioning and speed faster and with more accuracy.

PRODUCT FEATURES

- 1080p Full HD video recording
- 30 FPS recording for smooth playback on any screen
- WDR Technology records greater scene details especially at nighttime
- f/1.6 aperture provides the sensor with more light for better images
- 7 element glass lens helps capture a sharper and clearer image
- 150 degree Wide View Angle sees more and reduces distortion
- 2.7" Widescreen LCD display makes navigation and playback of video files easier
- Built in G-Sensor triggers a file protection of all video files in the event of an accident
- One touch on/off audio recording makes keeping conversations private simple
- SOS file locking saves files from being recorded over at the touch of a button
- Loop recording allows the dashcam to record over older video without interruption
- Parking surveillance mode (hardwire kit required) records even when you are away from your vehicle
- Motion detection turns the camera recording on when motion is detected
- 10x speed GPS logging for fast and accurate GPS coordinates and information
- Auto Power-on automatically starts recording when ignition is turned on
