DIGI EX15

Branch connectivity in a compact, affordable all-in-one solution

Digi® EX15 LTE cellular extenders offer gigabit Ethernet and Wi-Fi connectivity for retailers and other organizations that cannot tolerate network downtime and the negative impact on revenue streams and brand reputation.

A suite of Digi upgradeable CORE plug-in LTE modems lets users select the cellular speeds that best fit their business requirements, including LTE-Advanced (CAT6) for data-intensive applications.

Couple Digi EX15 with a dedicated wire line connection to ensure dual ISP connectivity, maximum uptime and complete business continuity for devices that must be "always up," such as mobile kiosks, digital signs and POS systems.

You can use Digi EX15 for primary LTE connectivity as well, while the serial port can be used to provide out-of-band (OOB) management for remote off-premise equipment.

Digi device management applications provide easy setup, configuration and support for Digi and third-party devices. Digi Remote Manager® (DRM) and Digi aView™ offer web-based device management solutions to securely monitor and control Digi enterprise routers and gateways after deployment, along with the health or your IoT network. For fast and easy installations, a site survey battery, PoE injector, and mounting accessories are included for proper placement based on optimal signal strength.

FEATURES AND BENEFITS

- LTE certified Digi CORE 1002-CM plug-in modem
- Upgrade to meet changing cellular standards
- Optimized connectivity to any Ethernet device
- Battery pack for site survey to identify optimal signal strength placement
- Multiple mounting options and accessories
- Serial port for remote out-of-band management
- Securely deploy, monitor and control devices with DRM and Digi aView
- Zero-touch provisioning and cloud management
