

The next
small thing
in scanning

FUJITSU

The ultra-compact, space-saving
FUJITSU Image Scanner **fi-800R**

A woman in blue scrubs is seated at a desk in a service center, working on a computer. The desk is cluttered with a printer, a telephone, and various papers. In the background, another person is visible working at a desk. The overall scene is a busy, professional environment.

See the big things
small can do for you.

**Great for onboarding and
public-facing applications**

Banks & Credit Unions
DMV Branches
Government Offices
Gyms & Health Clubs
Hotels & Lodging
Kiosks
Medical Clinics
Pharmacies
Rental Car Services
Security Agencies

**Refine your customer experience
with the Fujitsu fi-800R.**

The front desk is where all the action happens. It's often a crowded, busy place where space is at a premium. And you don't want to waste space with a large scanner for documents, plus another one for IDs and passports. Or worse, keep customers waiting while you walk to the back office to use the copier.

Improve your workflow, customer experience, and usable space with one simple solution: the **fi-800R**. It's half the size of a typical workgroup scanner. It can scan most IDs, passports, and business documents at the speed of a workgroup scanner. And your employees speed through onboarding faster and better than ever.

The right scanner for tight spaces.

Free up some room.

It's incredibly small. About half the size of the average workgroup scanner, in fact, even while in use. A novel dual-path feeding mechanism eliminates the paper exit tray, meaning the fi-800R is able to fit into the tightest spaces without needing a lot of operating clearance. If you have a separate passport scanner, you can eliminate it.

Just one scanner handles all the documents.

Give it everything you've got. U-turn Scan captures both sides of customer onboarding forms, invoices, and small mixed batches at up to 40 pages per minute (80 images per minute). Return Scan takes ID cards and passports in the front slot and returns them there when done.

Return Scan captures hard cards and thick passports without a carrier sheet

Mixed batches are no problem, even when they're not carefully prepped

U-turn Scan saves space by returning scanned paper to the input tray

Scan passports, IDs, and more with one scanner designed to handle it all, quickly and efficiently

Designed for how the front office really works.

Front-end employees are typically scanning many very small batches and cards throughout the day, not large batches of similar documents. That's why the fi-800R switches seamlessly from U-turn Scan to Return Scan based on where documents are inserted. It's easy to continually scan items from either input.

The leader in document handling.

With its ability to handle paper from the thinnest receipts to the thickest passports, you'll only need one scanner up front to do all your onboarding and general office scanning. No carrier sheet required.

Big features in a small package.

Thoughtful design saves space.

With innovative **Automatic Stacking Control**, the stacker automatically extends when U-turn Scan starts, then retracts when scanning is complete.

Engineered for reality.

Automatic Skew Correction detects unorganized documents that have been roughly set and straightens each document before scanning, so that papers are fed neatly. This functionality minimizes errors like paper jams or images with missing edges that may occur due to being skewed.

Stops multi-feeds and jams.

Active Separation adjusts the optimal pressure applied to scanned documents, according to paper thickness and condition. This ensures stable paper feeding with precise paper separation and prevents multi-feed errors and skewed documents.

Smart facial recognition.

The **Front Side Detection** recognizes faces on ID cards or passports. Even if documents are scanned face down, PaperStream IP automatically rearranges images so that scanned pages are organized in the correct order.

Get data directly from the MRZ.

Information contained in the **Machine Readable Zone** of a passport, like number, name and nationality, can be extracted by PaperStream Capture to efficiently manage customer information.
