

WCS 3900/3905

Programming Guide

Please Read

Note:

The Wasp WCS 3900 / 3905 Scanners are ready to scan the most popular bar codes out of the box. ***This manual should only be used to make changes in the configuration of the scanner for specific applications.*** These scanners do not require software or drivers to operate. The scanner enters data as keyboard data. Please review this manual before scanning any of the programming bar codes in this manual.

Tech Tip

If you are unsure of the scanner configuration or have scanned the incorrect codes, please scan the default bar code on page 6. This will reset the scanner to its factory settings.

Introduction

Bar coding is the most common Automated Data Collection (ADC) technology providing timely, error-free information that can be used to increase productivity, accuracy, and efficiency in the workplace. Virtually every type of industry is using bar codes to replace keyboard data entry. Studies have shown that a proficient data entry operator will make one error for every 300 characters that are manually entered. The error rate using bar codes is almost negligible and can be error-free using bar code symbologies with the check digit enabled.

The Wasp Charged Coupled Device (CCD) technology is a technique whereby a bar code is photographed, digitized, and electronically sampled by built-in photodetectors. The detectors process the measurement of every bar and space using the number of adjacent photodetectors which contrast a black mark and a white space. Wasp WCS 3900 Series Scanners are extremely rugged since they have no moving parts. WCS 3900 Series Scanners support PC AT/XT and PS/2 keyboard interfaces and easily wedge between the computer and keyboard. Bar code data is passed directly into the keyboard buffer as if it had been typed in by hand by a data entry operator.

Of all the hand held bar code scanning devices on the market, the CCD reader is the easiest to use and most cost effective for the typical business user. To activate the scanner, the user simply points the scanning aperture towards the bar code, pulls the trigger, and aims the red LED beam across the bar code.

Bar Code Symbologies

Bar codes are symbols consisting of a series of bars and spaces which can be applied to packages, cartons, bottles, and other commercial products. The bars and spaces in each symbol are grouped in such a way to represent a specific ASCII character or function. The interpretation of these groups is based on a particular set of rules called symbologies. Various symbologies have been developed for particular applications. Some examples are shipping and receiving, manufacturing, retail, healthcare, transportation, document processing and tracking, and libraries.

The resolution of a bar code is dependent on the narrowest element of a bar code (X dimension), and can vary from high density (nominally less than 0.009 in./0.23 mm), medium density (between 0.009 in./0.23 mm and 0.020 in./0.50 mm), and low density (greater than 0.020 in./0.50 mm). Medium and low densities are the most common since these are the easiest to read (scan) with nearly all scanning devices. The scanner can read bar codes with X-dimensions as low as 5 mils (0.005 in/0.13mm).

WCS 3900 Series Scanners can read the most popular bar code symbologies including Code 39, Code 93, Code 128, Interleaved 2 of 5, UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Codabar, and MSI/Plessey.

Please see test chart on pages 28-30.

Installation

WCS 3900 PS2 Scanner

1. Turn off your computer.
2. Unplug your PC keyboard cable and plug the male end (Din 6) of the WCS 3900 / 3905 Scanner directly into your PC keyboard port. Plug your keyboard cable into the other end (female Din 6) of the the scanner.
3. Turn your computer on.

WCS 3905 USB Scanner

1. Plug the USB of the WCR 3900 / 3905 Scanner directly into your PC's USB port.

Quick Start

Your Wasp WCS 3900 / 3905 Scanners are ready for use. The default settings of the scanners have been pre-programmed for the most common bar code configurations. Use the "WCS 3900 / 3905 Setup & Configuration" sections only to customize the scanners settings. Please review the "Enable Bar Code Symbologies" configuration beginning on page 14 to see the list of bar codes symbologies which are enabled by default.

Tip:

- Use the pre-printed "Bar Code Test Symbols" in Appendix A on pages 28-30 as a test chart to practice scanning.

PS2 Connection

Setup & Configuration

In order to configure Wasp WCS 3900 / 3905 Scanners, you must familiarize yourself with the setup procedures on the following pages. The default settings of the scanners are identified on each page and clearly marked using an asterisk (*). **The default settings have been programmed for the most common bar code configurations. Use the setup & configuration barcodes only to customize the WCS 3900 / 3905 Scanners settings.** If you need to configure the Scanner, the default settings will be overwritten. All the programmed settings are stored permanently in non-volatile memory; therefore, your configuration will be maintained even if the keyboard power to the WCS 3900 / 3905 Scanners are removed by turning off your PC.

In order to configure Wasp WCS 3900 / 3905 Scanners, two basic steps need to be followed:

- (1) Locate the group that contains the options to be changed.
- (2) Scan the bar code representing the option to be changed. The scanner will sound two beeps.

To change Minimum/Maximum Length:

- (1) Scan the Minimum or Maximum Length bar code on page 15.
- (2) Scan a 2 digit value from the ASCII table on pages 31-34
- (3) Scan the Minimum or Maximum Length bar code again.

Example: *To have a minimum length bar code of 1, you must scan a 0 then 1, then scan the minimum bar code again. To have a maximum length bar code of 10, you must scan a 1 then 0, then scan the maximum bar code again.*

Chapter 5

Factory Default & Keyboard Connection

Factory Default

Use the **Factory Default** bar code to reset the scanner to the Default settings.

Factory Default

Continuous Mode

Scan this continuous scan mode barcode to enable continuous scanning. This feature allows the scanner to be used with a stand for hands free scanning. The trigger is functionless in this mode. To turn this mode off scan the default barcode above.

Continuous Scan Mode Enable

Keyboard Connection

The Keyboard Connection is used to program the Wasp WCS 3900/3905 scanner for the type of host computer.

PC - XT

Notebook

*Default

The 'Beep and Delay' configuration supports the general control options for the WCS 3900 / 3905 Scanners. These options include the volume, intercharacter delay, and interblock delay.

Interblock delay is the minimum time interval between two adjacent scans. If the processing speed of your host device is slower than your scanning speed, a longer interblock delay may ensure the data integrity.

Intercharacter delay is the time period that the scanner will wait before transmitting the next character. If data sent by the scanner has incorrect or missing characters, a longer intercharacter delay may solve the problem. The intercharacter delay should be changed only if the transfer rate cannot be maintained between the scanner and the keyboard buffer of the computer.

Note: The default for the intercharacter delay is set to '140us' and is the most common configuration; however, your PC may be different. When you scan a bar code, if stray or scrambled characters appear, increase the intercharacter delay to slow down the transfer rate.

- Caps Lock Auto (For PC XT/AT only):
In Auto mode, the scanner will keep track of the Caps Lock status automatically. For some PCs, the scanning performance may be compromised because of the auto tracing. If the scanning performance is poor (or cannot scan) or the scanner cannot output the upper/lower case characters correctly, try to select one of the next two choices instead of auto tracing.
- Caps Lock Off:
When the keyboard is in the unshifted state (Caps Lock is not pressed), select "Lower Case."
- Caps Lock On:
When the keyboard is in the shifted state (Caps Lock is on), select "Upper Case."

The 'Preamble/Postamble' configuration is used to add a prefix or suffix set of characters to the bar code value. Up to 8 characters may be added for each option separately. Preamble and postamble characters can function concurrently, but need to be configured separately.

To add preamble or postamble characters, follow the steps below:

- 1) Scan the 'Clear Pre/Postamble' bar code on this page.
- 2) Scan the 'Preamble' or 'Postamble' bar code.
- 3) Use Appendix B on pages 31-34 to locate the characters you want to add as preamble or postamble characters. Make sure that you scan the bar code associated with each letter before preceding to the next character. For example, to add the letter "A," scan the bar code corresponding to the letter "A" on page 33. The letter "A" will always appear in your data as prefix or suffix to the bar code value.
- 4) Scan the corresponding 'Pre/Postamble' bar code on this page to exit this setting.

Code 39 is variable length and is the most frequently used symbology in industrial bar code systems today. It is extensively used within the Department of Defense (DOD). The principal feature is to encode messages using the full alphanumeric character set. Standard Code 39 contains only 43 characters (0-9, A-Z, \$, /, %, +, -, ., SPACE) and can be extended to a 128 character symbology (full ASCII) by combining one of the special characters (S, /, %, +) with a letter (A-Z) to form the characters that are not present in the standard Code 39 symbology.

See page 5 for information on setting the minimum and maximum lengths.

Interleaved 2 of 5 and Code 93 Settings

Interleaved 2 of 5 is a variable length, even numbered, numeric bar code. It is typically used in industrial and master carton labeling and also in the automobile industry. The symbology uses bars to represent the first digit of a pair and the interleaved (white) spaces to represent the second digit of a character pair. See page 5 for information on setting the minimum and maximum lengths.

Chapter 5

MSI Plessey Settings

MSI Plessey is a variable length numeric symbology and is primarily used in marking retail shelves. Each character consists of four bars with intervening spaces for each encoded digit, one or two symbol check digits, and a reverse start code.

See page 5 for information on setting the minimum and maximum lengths.

Codabar is a variable length symbology capable of encoding six special alphanumeric characters, capital letters A through D, T, N, *, E, and all numeric digits. Codabar is one of the oldest bar code symbologies and is still used in some library applications. It should not be considered for new applications except under unusual circumstances.

Chapter 5

UPC-A Settings

UPC-A (Universal Product Code-A) is fixed length and is the most common UPC bar code for retail product labeling. It is seen in most grocery stores across the United States. The symbology encodes a 12-digit number. The first six digits are assigned from the Uniform Code Council (UCC). The next five digits are assigned by the manufacturer, and the final digit is a modulo 10 check digit. The nominal height for the UPC-A bar code is one inch. The reduced size is 80% of the nominal size.

UPC-E Settings

UPC-E (Universal Product Code-E) is fixed length and is a compressed six digit code used for marking small packages, including magazines and paperback books. UPC-E symbols are UPC-A symbols that have been zero suppressed (i.e. consecutive zeros are not included in the symbol). The printed value of the UPC-E code is a twelve digit code. The nominal height for the UPC-E bar code is one inch. The reduced size is 80% of the nominal size.

Technical Specifications

MODEL	WCS 3900 / 3905
OPTICAL	
Scanning Width	3.00" (76mm)
Depth of Field	contact to 5mm
Scan Rate	45 scans / second
Decode Rate	100 scans / second
ELECTRICAL	
Light Source	660 nm red visible LED
Sensor	2088 linear imager
Operating Voltage	+5 VDC \pm 5%
Current Consumption	Decoded: Standby <30 mA/ Working <95 mA
Output	WCS 3900 Keyboard, WCS 3905 USB
MECHANICAL	
Dimensions	L7.40" x W3.62" xH1.06"
Weight	125 g (without cable)
Cable	6 ft
Housing	ABS
ENVIRONMENTAL	
Operating Temperature	0°C to 50°C
Storage Temperature	-20°C to 60°C
Relative Humidity	20% to 80% non-condensing
Safety Certification	Conforms FCC Class A and CE requirements

Product Support

If you experience any problems with the Wasp WCS 3900 / 3905 Scanners that you are unable to resolve, call for technical assistance at (214) 547-4100, Monday through Friday, 8:00 AM - 5:00 PM Central Standard Time. Our web site is

www.waspbarcode.com

You may also contact us in writing at:

Wasp Technologies
1400 10th Street
Plano, TX 75074
(214) 547-4100
(214) 547-4101 Fax

Warranty Information

Wasp Technologies products are warranted against defects in workmanship and materials for a period of one year from the date of shipment, provided that the product remains unmodified and is operated under normal and proper conditions.

This warranty is limited to repair or replacement at Wasp Technologies option, with reasonable promptness after being notified. These provisions do not prolong the original warranty term for any product which has been repaired or replaced by Wasp Technologies.

This warranty applies to the original owner and does not extend to any product which has been subject to *misuse, neglect, accidental damage, unauthorized repair, or tampering.*

No other express warranty is given. The replacement or repair of a product is your exclusive remedy. Any other implied warranty of merchantability or fitness is limited to the duration of this written warranty. Some states, provinces, and countries do not allow limits on how long an implied warranty lasts, so the above limitation may not apply to you.

In no event shall Wasp Technologies be liable for consequential damages. Some states, provinces, and countries do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you.

Frequently Asked Questions

Q: How do I configure the scanner for a notebook (or laptop) computer?

A: Scan the “Notebook” bar code on page 6.

Q: How do I change the terminator to a Tab?

A: Scan the “Tab” bar code on page 12.

Q: How do I remove the terminator?

A: Scan the “None” bar code on page 12.

Q: How do I enable the Full ASCII character set for the Code 39 bar code symbology?

A: Scan the following “Enable Code 39 Full ASCII” bar code on page 15.
