Thank you for purchasing the 12Gb/s LSI® MegaRAID® Serial Attached SCSI (SAS) 9341-4i RAID controller or the LSI MegaRAID SAS 9341-8i RAID controller. Your MegaRAID controller provides reliability, high performance, and fault-tolerant drive subsystem management, and it offers an ideal RAID solution for the internal storage of workgroup, departmental, and enterprise systems.

Before you install your RAID controller, take a few minutes to read this quick installation guide. This guide describes the MegaRAID SAS 9341-4i RAID controller and the MegaRAID SAS 9341-8i RAID controller, and it documents how to install your controller.

If you need more information about any topic covered in this guide, refer to the following documentation on the MegaRAID Universal Software Suite CD:

- 12Gb/s MegaRAID SAS RAID Controllers User Guide
- MegaRAID SAS Software User Guide
- MegaRAID Device Driver Installation User Guide
- Software license agreement

Product Overview

The MegaRAID SAS 9341-4i RAID controller and the MegaRAID SAS 9341-8i RAID controller are PCI-Express® (PCIe®) 3.0, low-profile controllers with RAID control capability. You can use these controllers in a system that supports both enterprise-class SAS drives and desktop-class SATA III drives. In addition, these controllers support integrated MegaRAID (iMR) functionality.

The MegaRAID SAS 9341-4i RAID controller, which is based on the LSISAS3004 I/O controller, uses a 16-MB Flash memory device for storing the BIOS and firmware and controls four internal SAS/SATA ports through one SFF-8643 mini-SAS HD-4i internal connector.

The MegaRAID SAS 9341-8i RAID controller, which is based on the LSISAS3008 I/O controller, uses a 16-MB Flash memory device for storing the BIOS and firmware and controls eight internal SAS/SATA ports through two SFF-8643 mini-SAS HD-4i internal connectors.

These 12Gb/s MegaRAID SATA+SAS RAID controllers are based on the LSI first-to-market SAS IC technology and proven MegaRAID technology. As third-generation PCIe RAID controllers, these controllers address the growing demand for increased data throughput and scalability requirements across midrange and enterprise-class server platforms. These RAID controllers provide these features:

- 12.0 Gb/s SAS III performance
- 6.0 Gb/s SATA III performance
- Eight-lane 8 GT/s PCIe host interface

SAS technology brings a wealth of options and flexibility with the use of SAS devices and SATA devices within the same storage infrastructure. However, SAS devices and SATA devices bring individual characteristics that make each one a more suitable choice depending on your storage needs. MegaRAID products give you the flexibility to combine these two similar technologies on the same controller, within the same enclosure, and in the same virtual drive.

**NOTE**  These RAID controllers support SATA II and SATA III technologies.

For more information, including the technical specifications for your RAID controller, refer to the 12Gb/s MegaRAID SAS RAID Controllers User Guide on the MegaRAID Universal Software Suite CD.
NOTE Record your RAID controller serial number in a safe location in case you need to contact LSI.

Installing the MegaRAID SAS 9341 RAID Controller

CAUTION It is good practice to back up your data before adding hardware, such as a RAID controller, to your system.

NOTE This section shows the installation of the MegaRAID 9341-8i RAID controller as an example. You can install the MegaRAID 9341-4i RAID controller in the same way.

1. Unpack the RAID controller.
   Unpack the RAID controller in a static-free environment. Remove it from the antistatic bag, and inspect it for damage. A low-profile bracket is included with the RAID controller. If the RAID controller appears to be damaged, or if the MegaRAID Universal Software Suite CD or the low-profile bracket is missing, contact LSI or your MegaRAID OEM support representative.

   The latest versions of the documentation, drivers, and firmware are available on the LSI website at http://www.lsi.com/support/Pages/download-search.aspx. See Technical Support for more information.

   The CD contains utility programs, device drivers for various operating systems, and related documentation.

2. Prepare the host computer.
   Turn off the host computer, and unplug the power cords from the rear of the power supply. Remove the cover from the host computer.

   CAUTION Before you install the RAID controller, make sure that the host computer is disconnected from the power and from any networks.

3. Install the RAID controller.
   Insert the RAID controller into a PCIe slot on the motherboard in the host computer, as shown in the following figure. Press down gently, but firmly, to seat the RAID controller correctly in the slot. Secure the RAID controller to the host computer chassis with the bracket screw.

   NOTE This RAID controller is a PCIe x8 card, and it can operate in x8 or x16 slots. Some PCIe slots, however, support only PCIe graphics cards; if a RAID controller is installed in one of these slots, the RAID controller will not function. Refer to the guide for your motherboard for information about the PCIe slot.
4. **Configure and install the SAS devices, SATA devices, or both in the host computer case.**
   Refer to the documentation for the devices for any preinstallation configuration requirements.

5. **Connect the RAID controller to the SAS devices, SATA devices, or both in the host computer case.**
   Use SAS cables to connect the RAID controller to SAS devices, SATA devices, or both. Refer to 12Gb/s MegaRAID SAS RAID Controllers User Guide on the MegaRAID Universal Software Suite CD for information about the connector locations.

   **NOTE**
   Refer to the 12Gb/s MegaRAID SAS RAID Controllers User Guide on the MegaRAID Universal Software Suite CD for detailed information about the SAS cables.

6. **Turn on the power to the host computer.**
   Reinstall the computer cover, and reconnect the power cords. Turn on the power to the host computer. Make sure that the power is turned on to the SAS devices and the SATA III devices before or at the same time that the power to the host computer is turned on. If the power is turned on to the host computer before it is turned on to the devices, the host computer might not recognize the devices.

   The firmware takes several seconds to initialize. During this time, the RAID controller scans the ports.
7. **Run the MegaRAID BIOS Configuration Utility.**
   Run the MegaRAID BIOS Configuration Utility to configure the groups and the virtual drives. When the message about the configuration utility appears on the screen, immediately press Ctrl+R to run the utility.

   **NOTE** Refer to the *MegaRAID SAS Software User Guide* for detailed steps on configuring drive groups and virtual drives.

8. **Install the operating system driver.**
   The RAID controller can operate under various operating systems, but you must install the software drivers first. The *MegaRAID Universal Software Suite* CD includes the software drivers for the supported operating systems, along with documentation. You can view the supported operating systems and download the latest drivers for RAID controllers from the LSI website at: [http://wwwlsi.com/cm/DownloadSearch.do](http://wwwlsi.com/cm/DownloadSearch.do). Access the download center, and follow the steps to download the driver.

   Refer to the *MegaRAID SAS Device Driver Installation User Guide* on the *MegaRAID Universal Software Suite* CD for more information about installing the driver. Be sure to use the latest service packs that are provided by the operating system manufacturer and to review the *readme* file that accompanies the appropriate driver.

---

**Technical Support**

For assistance in installing, configuring, or running your MegaRAID SAS 9341 RAID controller, contact an LSI Technical Support representative.

Click the following link to access the LSI Technical Support page for storage and controller support:

[http://wwwlsi.com/about/contact/pages/support.aspx](http://wwwlsi.com/about/contact/pages/support.aspx)

This page contains links to the following URLs for support by email, support request, or phone. In addition, you can hover over the *Support* heading on the Technical Support page, and click the support option you want.

**Email Requests:**
