Thank You!

Thanks for purchasing a Blue Tiger Deluxe Bluetooth headset. Please double check the contents of your package to verify that you have received all of the included items. Read the user guide in its entirety before operating your headset. Your Blue Tiger headset can be paired with any device that is Bluetooth enabled.
Getting Started – Battery Care

Please fully charge your new headset before attempting to pair your headset for the first time. Your headset should be charged for a minimum of four hours and no more than eight hours to achieve a full charge. The LED will remain solid red while charging, and will turn off when fully charged.
Blue Tiger Deluxe Overview

- Headband Adjustment Points
- Up Volume/Next Track
- Down Volume/Previous Track
- Multi-Function Button (MFB)
- LED Indicator

FIRST TIME USAGE INSTRUCTIONS

Adjusting the Headband: We recommend that you extend the headband slightly on both sides to reduce tension and increase the headband’s flexibility.

Pairing the Headset: Before your headset can be used with your phone, it must first be connected, or paired, to your phone. This process should only need to be completed one time with each new device.
Instructions for Pairing:

1. Make sure that your Blue Tiger headset is in the "Off" position (no light flashing on the side of the headset), press and hold the MFB for about 10 seconds, until the LED light begins alternating between red and blue flashes.

2. On your phone or other Bluetooth device, go to your Bluetooth menu (sometimes located under Settings, Wireless, Connectivity, or another submenu), and select "Add New" or "Search for New Devices."
3. On your phone or other Bluetooth device, select your headset on the list. Your device may ask for a passcode. If so, input "0000."

4. On your phone or other Bluetooth device, select "Connect" or "Automatically Connect."
**Having Trouble?:** If your phone does not “see” your headset, check to make sure the LED light on the headset is flashing blue and red. Once you have verified that it is flashing and your phone is not recognizing the headset, try rebooting your phone and attempt pairing again.

**General Functions**

**Turn On:** Press and hold the MFB button for 5 seconds until the indicator light flashes blue 3 times.
NOTE: For the first 5 cycles of turning on the headset, the headset will beep twice, flash blue 5 times, and then two more times.

Turn Off: Press and hold the MFB for 5 seconds. The headset will beep three times and then the indicator light will flash red three times.

Voice Dialing: Press and hold the MFB for about one second. Your phone should then activate its voice dialing function. This process may vary slightly based on your particular phone model.
**Redialing:** Press the MFB twice quickly.

**Answering/Ending a Call:** Press the MFB once.

**Mute On/Off:** Press and hold the Down Volume (-) button for 2-3 seconds.

*NOTE: Some functions may or may not work with certain phone models. See your phone’s manual for more information.*
Instructions for Using Multimedia Audio:

1. To play a song or video, select the file, playlist, or audio program (Pandora, iHeart Radio, etc.) and press the MFB to play.

2. Use the Up and Down volume buttons to skip or rewind to previous track (if the media application allows).

3. Pause music using the MFB.

4. If your phone rings, you may answer the call using the MFB and, upon ending the call, your media should begin playing again automatically (varies by device).
Bluetooth Tips
Most Bluetooth headsets, including Blue Tiger headsets, have a range of about 10 meters (about 30 feet). However, there are factors that can increase or decrease your range and signal strength.

Like most radio transmissions, line of sight plays an important role. If your headset has a clear line of sight to your phone, you may be able to go beyond the 30 meter mark. On the other hand, if you do not have good line of sight or have something
like a wall between the headset and phone, you may only get a few feet of range.

Additionally, other factors may interfere with Bluetooth signal transmission. Other devices emitting radio waves, minor non-harmful radiation from every day electronic devices, or even the magnetic field around one's body may at times cause interference. The best way to avoid this is to remove your phone or other Bluetooth device from contact or close proximity to the source of the interference.
Troubleshooting Tips
*Ensure that your headset has enough power, is turned on, and has been successfully paired with your device. (Follow the pairing instructions located in this manual)
*If you are having trouble getting the headset paired, try rebooting your phone.
*Ensure that you have enabled your Bluetooth function on your phone or device.
*Be sure that you are within 10 meters (about 30 feet) of your phone or Bluetooth enabled device with good line of sight and
with no other electromagnetic interferences obstructing your wireless link.

*If the indicator light on your headset is flashing red, your battery is running low.
*If indicator light goes off during charging, do not be alarmed, headset is still receiving a charge.
*Only use included accessories with your Blue Tiger Deluxe. Using unauthorized chargers could damage your battery.
Headset Storage
*Store headset away from dust, heat, and water.
*Do not store headset or chargers in extreme environments.

Additional Support
If you have any other questions or for information about your headset warranty, please contact our Customer Service department at 1-800-935-1165, see our technical support page on our website, bluetigerusa.com/technical-support.
