TOSHIBA TECRA S3 Portable Personal Computer User’s Manual

First edition September 2005

Copyright authority for music, movies, computer programs, data bases and other intellectual property covered by copyright laws belongs to the author or to the copyright owner. Copyrighted material can be reproduced only for personal use or use within the home. Any other use beyond that stipulated above (including conversion to digital format, alteration, transfer of copied material and distribution on a network) without the permission of the copyright owner is a violation of copyright or author’s rights and is subject to civil damages or criminal action. Please comply with copyright laws in making any reproduction from this manual.

Disclaimer

This manual has been validated and reviewed for accuracy. The instructions and descriptions it contains are accurate for the TOSHIBA TECRA S3 Portable Personal Computer at the time of this manual’s production. However, succeeding computers and manuals are subject to change without notice. TOSHIBA assumes no liability for damages incurred directly or indirectly from errors, omissions or discrepancies between the computer and the manual. Graphics processor performance may vary considerably from specifications due to design configuration.

Trademarks

IBM is a registered trademark and IBM PC is a trademark of International Business Machines Corporation.

Intel, Intel SpeedStep, Pentium and Centrino are trademarks or registered trademarks of Intel Corporation.

Windows and Microsoft are registered trademarks of Microsoft Corporation.

Photo CD is a trademark of Eastman Kodak.

Sonic RecordNow! is a registered trademark of Sonic Solutions.

Bluetooth is a trademark owned by its proprietor and used by TOSHIBA under license.

i.LINK is a trademark and registered trademark of Sony Corporation.

OmniPass is a trademark of Softex Incorporated.

InterVideo and WinDVD are registered trademarks of InterVideo Inc.

WinDVD Creator is a trademark of InterVideo Inc.

Other trademarks and registered trademarks not listed above may be used in this manual.
EU Declaration of Conformity

This product is carrying the CE-Mark in accordance with the related European Directives. Responsible for CE-Marking is TOSHIBA Europe GmbH, Hammfelddamm 8, 41460 Neuss, Germany.

The complete and official EU Declaration of Conformity can be found on TOSHIBA’s web site http://epps.toshiba-teg.com on the Internet.

Modem warning notice

Conformity Statement

The equipment has been approved to [Commission Decision “CTR21”] for pan-European single terminal connection to the Public Switched Telephone Network (PSTN).

However, due to differences between the individual PSTNs provided in different countries/regions the approval does not, of itself, give an unconditional assurance of successful operation on every PSTN network termination point.

In the event of problems, you should contact your equipment supplier in the first instance.

Network Compatibility Statement

This product is designed to work with, and is compatible with the following networks. It has been tested to and found to conform with the additional requirements conditional in EG 201 121.

- **Germany**: ATAAB AN005, AN006, AN007, AN009, AN010 and DE03, 04, 05, 08, 09, 12, 14, 17
- **Greece**: ATAAB AN005, AN006 and GR01, 02, 03, 04
- **Portugal**: ATAAB AN001, 005, 006, 007, 011 and P03, 04, 08, 10
- **Spain**: ATAAB AN005, 007, 012, and ES01
- **Switzerland**: ATAAB AN002
- **All other countries/regions**: ATAAB AN003, 004

Specific switch settings or software setup are required for each network, please refer to the relevant sections of the user guide for more details.

The hookflash (timed break register recall) function is subject to separate national type approvals. It has not been tested for conformity to national type regulations, and no guarantee of successful operation of that specific function on specific national networks can be given.
Following information is only for EU-member states:

The use of the symbol indicates that this product may not be treated as household waste. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. For more detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Description on Laser specification

The optical drive such as DVD-ROM&CD-R/RW drive and DVD Super Multi drive that is used in this computer is equipped with laser. The classification label with the following sentence is affixed to the surface of the drive.

CLASS 1 LASER PRODUCT
LASER KLASSE 1
LUOKAN 1 LASERLAITE
APPAREIL A LASER DE CLASSE 1
KLASS 1 LASER APPARAT

The drive with the above label is certified by the manufacturer that the drive complies with the requirement for laser product on the date of manufacturing pursuant to article 21 of Code of Federal Regulations by the United States of America, Department of Health & Human Services, Food and Drug Administration.

In other countries, the drive is certified to comply with the requirement pursuant to IEC 825 and EN60825 on class 1 laser product.

This computer is equipped with one of the optical disc drives in the following list:

<table>
<thead>
<tr>

</tbody>
</table>
TOSHIBA computers are designed to optimize safety, minimize strain and withstand the rigors of portability. However, certain precautions should be observed to further reduce the risk of personal injury or damage to the computer.

Be certain to read the general precautions below and to note the cautions included in the text of the manual.

**Stress injury**

Carefully read the *Instruction Manual for Safety & Comfort*. It contains information on prevention of stress injuries to your hands and wrists than can be caused by extensive keyboard use. Chapter 3, *Getting Started*, also includes information on work space design, posture and lighting that can help reduce physical stress.

**Heat injury**

- Avoid prolonged physical contact with the computer. If the computer is used for long periods, its surface can become very warm. While the temperature will not feel hot to the touch, if you maintain physical contact with the computer for a long time (if you rest the computer on your lap, or if you keep your hands on the palm rest, for example) your skin might suffer low-heat injury.
- If the computer has been used for a long time, avoid direct contact with the metal plate supporting the I/O ports. It can become hot.
- The surface of the AC adaptor can become hot when in use. This condition does not indicate a malfunction. If you need to transport the AC adaptor, disconnect it and let it cool before moving it.
- Do not lay the AC adaptor on a material that is sensitive to heat. The material could be damaged.

**Pressure or impact damage**

Do not apply heavy pressure to the computer or subject it to strong impact. Excessive pressure or impact can cause damage to computer components or otherwise cause malfunctions.
General Precautions

PC card overheating

Some PC cards can become hot with prolonged use. Overheating of a PC card can result in errors or instability in the PC card operation. Also be careful when you remove a PC card that has been used for a long time.

Mobile phones

Use of mobile phones can interfere with the audio system. Computer operation is not impaired but it is recommended that a distance of 30 cm be maintained between the computer and a mobile phone in use.

   Glossary
   Index
Preface

Congratulations on your purchase of the TECRA S3 computer. This powerful notebook computer provides excellent expansion capability, including multimedia devices, and it is designed to provide years of reliable, high-performance computing.

This manual tells how to set up and begin using your TECRA S3 computer. It also provides detailed information on configuring your computer, basic operations and care, using optional devices and troubleshooting.

If you are a new user of computers or if you’re new to portable computing, first read over the Introduction and The Grand Tour chapters to familiarize yourself with the computer’s features, components and accessory devices. Then read Getting Started for step-by-step instructions on setting up your computer.

If you are an experienced computer user, please continue reading the preface to learn how this manual is organized, then become acquainted with this manual by browsing through its pages. Be sure to look over the Special features section of the Introduction, to learn about features that are uncommon or unique to the computers and carefully read HW Setup.

If you are going to install PC cards or connect external devices such as a monitor, be sure to read Chapter 8, Optional Devices.

Manual contents

This manual is made up of the following.

Chapter 1, Introduction, is an overview of the computer’s features, capabilities, and options.

Chapter 2, The Grand Tour, identifies the components of the computer and briefly explains how they function.

Chapter 3, Getting Started, provides a quick overview of how to begin operating your computer and gives tips on safety and designing your work area.

Chapter 4, Operating Basics, This chapter describes the basic operations of your computer and precautions when using it, as well as the handling of CD/DVD.

Chapter 5, The Keyboard, describes special keyboard functions including the keypad overlay and hot keys.
Chapter 6, *Power and Power-Up Modes*, gives details on the computer’s power resources and battery save modes and how to set a password.

Chapter 7, *HW Setup*, explains how to configure the computer using the HW Setup program and TPM.

Chapter 8, *Optional Devices*, describes the optional hardware available.

Chapter 9, *Troubleshooting*, provides helpful information on how to perform some diagnostic tests, and suggests courses of action if the computer doesn’t seem to be working properly.

The *Appendixes* provide technical information about your computer.

The *Glossary* defines general computer terminology and includes a list of acronyms used in the text.

The *Index* quickly directs you to the information contained in this manual.

**Conventions**

This manual uses the following formats to describe, identify, and highlight terms and operating procedures.

**Abbreviations**

On first appearance, and whenever necessary for clarity, abbreviations are enclosed in parentheses following their definition. For example: Read Only Memory (ROM). Acronyms are also defined in the Glossary.

**Icons**

Icons identify ports, dials, and other parts of your computer. The indicator panel also uses icons to identify the components it is providing information on.

**Keys**

The keyboard keys are used in the text to describe many computer operations. A distinctive typeface identifies the key top symbols as they appear on the keyboard. For example, *Enter* identifies the Enter key.

**Key operation**

Some operations require you to simultaneously use two or more keys. We identify such operations by the key top symbols separated by a plus sign (+). For example, *Ctrl* + C means you must hold down *Ctrl* and at the same time press C. If three keys are used, hold down the first two and at the same time press the third.

**ABC** When procedures require an action such as clicking an icon or entering text, the icon’s name or the text you are to type in is represented in the type face you see to the left.
Display

Names of windows or icons or text generated by the computer that appear on its display screen are presented in the type face you see to the left.

Messages

Messages are used in this manual to bring important information to your attention. Each type of message is identified as shown below.

Pay attention! A caution informs you that improper use of equipment or failure to follow instructions may cause data loss or damage your equipment.

Please read. A note is a hint or advice that helps you make best use of your equipment.

Indicates a potentially hazardous situation, which could result in death or serious injury, if you do not follow instructions.
Chapter 1

Introduction

This chapter provides an equipment checklist, and it identifies the computer’s features, options and accessories.

⚠️ Some of the features described in this manual may not function properly if you use an operating system that was not preinstalled by TOSHIBA.

Equipment checklist

Carefully unpack your computer. Save the box and packing materials for future use.

Hardware

Check to make sure you have all the following items:

- TECRA S3 Portable Personal Computer
- AC adaptor and power cord (2-pin plug or 3-pin plug)
- Modular cable for modem (optional)
Software

Microsoft® Windows XP Professional

- The following software is preinstalled:
  - Microsoft® Windows XP Professional
  - Microsoft Internet Explorer
  - TOSHIBA Utilities
  - TOSHIBA SD Memory Boot Utility
  - DVD Video Player
  - TOSHIBA Dual Pointing Device utility
  - TOSHIBA Power Saver
  - TOSHIBA Mobile Extension
  - TOSHIBA Assist
  - TOSHIBA ConfigFree
  - TOSHIBA Zooming Utility
  - TOSHIBA PC Diagnostic Tool
  - TOSHIBA Controls
  - TOSHIBA Mic Effect
  - TOSHIBA Password Utility
  - TOSHIBA RAID Console
  - Fingerprint utility
  - Online manual

Documentation and Backup media

- TECRA S3 Portable Personal Computer User’s Manual
- TECRA S3 Quickstart
- Instruction Manual for Safety & Comfort
- Warranty information
- Product Recovery DVD-ROM

If any of the items are missing or damaged, contact your dealer immediately.

Features

The computer uses TOSHIBA’s advanced Large Scale Integration (LSI), Complementary Metal-Oxide Semiconductor (CMOS) technology extensively to provide compact size, minimum weight, low power usage, and high reliability. This computer incorporates the following features and benefits:
**Processor**

**Built-in**

The computer is equipped with an Intel® Pentium® M processor, which incorporates a 2 MB level 2 cache memory and supports Enhanced Intel® SpeedStep™ technology. Other processors may be introduced.

---

*Some models in this series carry Intel® Centrino™ technology, which is based on three separate technologies of Intel® Pentium® M processor, Intel® PRO/Wireless Network Connection, and Intel® 915 Chipset Family.*

---

**Disclaimer (CPU)**

CPU performance in your computer product may vary from specifications under the following conditions:

- use of certain external peripheral products
- use of battery power instead of AC power
- use of certain multimedia, computer generated graphics or video applications
- use of standard telephone lines or low speed network connections
- use of complex modeling software, such as high end computer aided design applications
- use of several applications or functionalities simultaneously
- use of computer in areas with low air pressure (high altitude >1,000 meters or >3,280 feet above sea level)
- use of computer at temperatures outside the range of 5°C to 30°C (41°F to 86°F) or >25°C (77°F) at high altitude (all temperature references are approximate and may vary depending on the specific computer model - please refer to your PC documentation or visit the Toshiba website at www.pcsupport.toshiba.com for details).

CPU performance may also vary from specifications due to design configuration.

Under some conditions, your computer product may automatically shut-down. This is a normal protective feature designed to reduce the risk of lost data or damage to the product when used outside recommended conditions. To avoid risk of lost data, always make back-up copies of data by periodically storing it on an external storage medium. For optimum performance, use your computer product only under recommended conditions. Read additional restrictions under “Environmental Conditions in appendix A.”
Memory

Slots

256, 512 or 1,024 MB memory modules can be installed in the two memory slots for a maximum of 2,048 MB system memory.

Video RAM

64 or 128 MB of RAM is provided for video display.

Power

Battery pack

The computer is powered by one rechargeable lithium-ion battery pack.

Disclaimer (Battery Life)

Battery life may vary considerably depending on product model, configuration, applications, power management settings and features utilized, as well as the natural performance variations produced by the design of individual components. Published battery life numbers are achieved on select models and configurations tested by Toshiba at the time of publication. Recharge time varies depending on usage. Battery may not charge while computer is consuming full power.

After going through many charge and discharge cycles, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is a normal phenomenon for all batteries. To purchase a new battery pack, see the accessories information that is shipped with your computer.

RTC battery

The internal RTC battery backs up the Real Time Clock (RTC) and calendar.

AC adaptor

The AC adaptor provides power to the system and recharges the batteries when they are low. It comes with a detachable power cord which will either have a 2-pin or 3-pin plug enclosure.

Because it is universal, it can receive a range of AC voltage from 100 to 240 volts; however, the output current varies among different models. Using the wrong model can damage your computer. Refer to the AC adaptor section in Chapter 2, The Grand Tour.
Disks

Hard disk drive

Available in four sizes.
- 40.0 billion bytes (37.26 GB)
- 60.0 billion bytes (55.89 GB)
- 80.0 billion bytes (74.53 GB)
- 100.0 billion bytes (93.16 GB)

Part of the space on the hard disk drive is reserved as administration space.
Other hard disk drives may be introduced.

Disclaimer (HDD Drive Capacity)

1 Gigabyte (GB) means $1000 \times 1000 \times 1000 = 1,000,000,000$ bytes using powers of 10. The computer operating system, however, reports storage capacity using powers of 2 for the definition of $1 \text{ GB} = 1024 \times 1024 \times 1024 = 1,073,741,824$ bytes, and therefore may show less storage capacity. Available storage capacity will also be less if the product includes one or more pre-installed operating systems, such as Microsoft Windows and/or pre-installed software applications, or media content. Actual formatted capacity may vary.

USB floppy disk drive (optional)

Accommodates either 3 1/2" 1.44-megabyte or 720-kilobyte floppy disks. It connects to a USB port.
### Optical media drive

**Computers in this series can be configured with an optical media drive installed in the Ultra Slim Bay. The available optical media drives are described below.**

<table>
<thead>
<tr>
<th>Drive Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| **DVD-ROM&CD-R/RW drive** | Some models are equipped with a full-size, DVD-ROM&CD-R/RW drive module that lets you run CD/DVDs without using an adaptor. It reads DVD-ROMs at maximum 8 speed and CD-ROMs at maximum 24 speed. It writes CD-R at maximum 24 speed and CD-RW at maximum 24 speed. The drive supports the following formats:  
  - CD-R  
  - CD-RW  
  - DVD-ROM  
  - DVD-Video  
  - CD-DA  
  - CD-Text  
  - Photo CD™ (single/multi-session)  
  - CD-ROM Mode 1, Mode 2  
  - CD-ROM XA Mode 2 (Form1, Form2)  
  - Enhanced CD (CD-EXTRA)  
  - Addressing Method 2 |
| **DVD Super Multi drive** | Some models are equipped with a full-size DVD Super Multi drive module that lets you record data to rewritable CD/DVDs as well as run either 12cm (4.72") or 8cm (3.15") CD/DVDs without using an adaptor. It reads DVD-ROMs at maximum 8 speed and CD-ROMs at maximum 24 speed. It writes CD-R at maximum 24 speed, CD-RW at maximum 10 speed, DVD-R and DVD+R at maximum 4 speed, DVD-RW and DVD-RAM at maximum 2 speed, DVD+RW and DVD+R DL at maximum 2.4 speed. This drive supports the following formats in addition to DVD-ROM&CD-R/RW drive:  
  - DVD-R  
  - DVD-RW  
  - DVD+R  
  - DVD+R DL  
  - DVD+RW  
  - DVD-RAM |
Display

The computer’s LCD display panel supports high-resolution video graphics. The LCD screen can be set at a wide range of viewing angles for maximum comfort and readability.

<table>
<thead>
<tr>
<th>Built-in</th>
<th>15&quot; TFT LCD screen, 16 M colors, with one of the following resolutions:</th>
</tr>
</thead>
<tbody>
<tr>

<td>■ XGA, 1024 horizontal × 768 vertical pixels</td>
</tr>
<tr>
<td></td>
<td>■ SXGA+, 1400 horizontal × 1050 vertical pixels</td>
</tr>
</tbody>
</table>

Disclaimer (LCD)

Over a period of time, and depending on the usage of the computer, the brightness of the LCD screen will deteriorate. This is an intrinsic characteristic of LCD technology.

Maximum brightness is only available when operating in AC power mode. The screen will dim when the computer is operated on battery power and you will not be able to increase the brightness of the screen.

Graphics controller

The graphics controller maximizes display performance. Refer to Display Controller and Modes section in Appendix B for more information.

Disclaimer (Graphics Processor Unit (“GPU”))

Graphics processor unit (“GPU”) performance may vary depending on product model, design configuration, applications, power management settings and features utilized. GPU performance is only optimized when operating in AC power mode and may decrease considerably when operating in battery power mode.

Keyboard

<table>
<thead>
<tr>
<th>Built-in</th>

Wireless LAN

Some computers in this series are equipped with a Wireless LAN mini-PCI card that is compatible with other LAN systems based on Direct Sequence Spread Spectrum/Orthogonal Frequency Division Multiplexing radio technology that complies with the IEEE 802.11 Standard (Revision A, B or G).

- Theoretical maximum speed:
  54Mbps (IEEE802.11a, 802.11g)
- Theoretical maximum speed:
  11Mbps (IEEE802.11b)
- Frequency Channel Selection
  (5 GHz: Revision A / 2.4 GHz: Revision B/G)
- Roaming over multiple channels
- Card Power Management
- Wired Equivalent Privacy (WEP) data encryption, based on 128 bit encryption algorithm.
- Wi-Fi Protected Access (WPA).
- Advanced Encryption Standard (AES) data encryption.

The values shown above are the theoretical maximums for Wireless LAN standards. The actual values may differ.

The transmission speed over the Wireless LAN and the distance over which Wireless LAN can reach may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, and client design and software/hardware configurations. The transmission rate described is the theoretical maximum speed as specified under the appropriate standard - the actual transmission speed will be lower than the theoretical maximum speed.
Disclaimer (Wireless LAN/Intel)
The transmission speed over the wireless LAN and the distance over which wireless LAN can reach may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, and client design and software/hardware configurations. [54Mbps is the theoretical maximum speed under the IEEE802.11 (a/b/g) standard.] The actual transmission speed will be lower than the theoretical maximum speed.

Special features

The following features are either unique to TOSHIBA computers or are advanced features, which make the computer more convenient to use.

<table>
<thead>
<tr>
<th>TOSHIBA Assist button</th>
<th>Press this button to launch an application automatically. The default is TOSHIBA Assist.</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOSHIBA Presentation button</td>
<td>Press this button to change internal display, external display, simultaneous display, or multi-monitor display.</td>
</tr>
<tr>
<td>Hot keys</td>
<td>Key combinations let you quickly change the system configuration directly from the keyboard without running a system configuration program.</td>
</tr>
</tbody>
</table>
Introduction

Display automatic power off

This feature automatically cuts off power to the computer’s LCD display panel when there is no keyboard input for a time specified. Power is restored when any key is pressed. You can specify the time in the Monitor power off item of the Basic Setup tab in TOSHIBA Power Saver.

HDD automatic power off

This feature automatically cuts off power to the hard disk drive when it is not accessed for a time specified. Power is restored when the hard disk is accessed. You can specify the time in the HDD power off item of the Basic Setup tab in TOSHIBA Power Saver.

System automatic Standby/Hibernation

This feature automatically shuts down the system into Standby Mode or Hibernation Mode when there is no input or hardware access for a time specified. You can specify the time and select either the System Standby or System Hibernation item of the Basic Setup tab in TOSHIBA Power Saver.

Keypad overlay

A ten-key pad is integrated into the keyboard. Refer to the Keypad overlay section in Chapter 5, The Keyboard, for instructions on using the keypad overlay.

Power on password

Two levels of password security, supervisor and user, are available to prevent unauthorized access to your computer.

Instant security

A hot key function blanks the LCD screen and disables the computer providing data security.

Intelligent power supply

A microprocessor in the computer’s intelligent power supply detects the battery’s charge and calculates the remaining battery capacity. It also protects electronic components from abnormal conditions, such as voltage overload from an AC adaptor. You can monitor remaining battery capacity by using the Battery remaining item in TOSHIBA Power Saver.

Battery save mode

This feature lets you save battery power. You can specify the Power Save Mode in the Profile item in TOSHIBA Power Saver.

Panel power on/off

This feature turns power to the computer off when the computer’s LCD display panel is closed and turns it back on when the computer’s LCD display panel is opened. You can specify the setting in the When I close the lid item of the Setup Actions tab in TOSHIBA Power Saver.
<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Low battery automatic hibernation</strong></td>
<td>When battery power is exhausted to the point that computer operation cannot be continued, the system automatically enters Hibernation and shuts down. You can specify the setting in the Setup Actions tab in TOSHIBA Power Saver.</td>
</tr>
<tr>
<td><strong>Heat dispersal</strong></td>
<td>To protect from overheating, the CPU has an internal temperature sensor. If the computer’s internal temperature rises to a certain level, the cooling fan is turned on or the processing speed is lowered. Use the Cooling Method item of the Basic Setup tab in TOSHIBA Power Saver.</td>
</tr>
<tr>
<td><strong>Optical media drive power icon</strong></td>
<td>Use this to turn the power of the optical media drive on or off. Clicking on the optical media drive icon on the taskbar will turn the power of the optical media drive on or off. If the optical media drive power is off, the disc tray will not open even if the eject button is pushed. The power of the optical media drive can be turned on using the optical media drive icon.</td>
</tr>
<tr>
<td><strong>HDD Protection</strong></td>
<td>Using the acceleration sensor built in the computer, HDD Protection detects vibration, shocks, and those signs in the computer, and automatically moves the HDD (Hard Disk Drive) head to the safe position to reduce the risk of damage that could be caused to the disk by head-to-disk contact. Refer to the Using the Hard Disk Drive (HDD) Protection section in Chapter 4, Operating Basics, for details.</td>
</tr>
</tbody>
</table>

The HDD Protection function does not guarantee that the hard disk drive will not be damaged.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hibernation</strong></td>
<td>This feature lets you turn off the power without exiting from your software. The contents of main memory are saved to the hard disk, when you turn on the power again, you can continue working right where you left off. Refer to the Turning off the power section in Chapter 3, Getting Started, for details.</td>
</tr>
</tbody>
</table>
### Standby
If you have to interrupt your work, you can turn off the power without exiting from your software. Data is maintained in the computer’s main memory. When you turn on the power again, you can continue working right where you left off.

### TOSHIBA RAID
RAID (Redundant Array of Independent Disks) realizes high performance (striping = RAID0) or fault tolerance (mirroring = RAID1), which are configured by arraying multiple independent hard disk drives. This feature is only available when a secondary hard disk drive is installed in the Ultra Slim Bay.

---

## Utilities

This section describes preinstalled utilities and tells how to start them. For details on operations, refer to each utility’s online manual, help files or readme.txt files.

### TOSHIBA Power Saver
To access this power savings management program, click **start**, click **Control Panel**, click **Performance and Maintenance** and click the **TOSHIBA Power Saver** icon.

### HW Setup
This program lets you customize your hardware settings according to the way you work with your computer and the peripherals you use. To start the utility, To access this utility, click **start**, click **Control Panel**, click **Printers and Other Hardware** and click the **TOSHIBA HWSetup** icon.

### TOSHIBA Controls
This utility lets you do the following:

- **Buttons**: Assign applications or functions to the TOSHIBA Presentation button (default setting is the simultaneous display on LCD and CRT with resolution of 1024 × 768) and to the TOSHIBA Assist button (default setting is the TOSHIBA Assist).
### Fingerprint utility
This product has a fingerprint utility installed for the purpose of enrolling and recognizing fingerprints. By enrolling the ID and password to the fingerprint authentication device, it is no longer necessary to input the password from the keyboard. Just by swiping the finger against the fingerprint sensor, the following functions will be enabled:

- Logon to Windows and access a security-enabled homepage through IE (Internet Explorer).
- Files and folders can be encrypted/decrypted and third party access to them prevented.
- Disable the password-protected screen-saver when returning from power-saving (standby) mode.
- System boot authentication and Single Touch Boot feature.
- Authentication of the User Password and Hard Disk Drive Password when booting up the computer.

### DVD Video Player
The DVD Video Player is used to play DVD-Video. It has an on-screen interface and functions. Click `start`, point to `All Programs`, point to `InterVideo WinDVD`, then click `InterVideo WinDVD`.

### Bluetooth Stack for Windows by Toshiba
This software enables communication between remote Bluetooth devices.

*Bluetooth cannot be used in models that do not have a Bluetooth module installed.*

### TOSHIBA SD Memory Boot Utility
The TOSHIBA SD memory boot utility allows you to create a bootable SD memory card to start the system. You can boot TOSHIBA SD Memory Boot Utility from the menu bar as follows. Click `start`, point to `All Programs`, point to `TOSHIBA`, point to `Utilities` and click `SD Memory Boot Utility`.

### TOSHIBA Zooming Utility
This utility allows you to enlarge or reduce the icon size on the desktop or the application window.
### RecordNow! Basic for TOSHIBA
You can create CD/DVDs in several formats including audio CDs that can be played on a standard stereo CD player and data CD/DVDs to store the files and folders on your hard disk drive. This software can be used on a model with DVD-ROM&CD-R/RW drive and DVD Super Multi drive.

### TOSHIBA Assist
TOSHIBA Assist is a graphical user interface that provides easy access to help and services. It is the default function launched by the TOSHIBA Assist button.

### TOSHIBA PC Diagnostic Tool
TOSHIBA PC Diagnostic Tool displays the basic information on the computer’s configuration and allows some of the built-in devices functionality to be tested. To start TOSHIBA PC Diagnostic Tool, click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Utilities** and click **PC Diagnostic Tool**.

### TOSHIBA Mobile Extension
This utility supports docking your computer to an optional Advanced Port Replicator III. To open the property dialog, select TOSHIBA Mobile Extension from TOSHIBA Assist.

### TOSHIBA ConfigFree
TOSHIBA ConfigFree is a suite of utilities to allow easy control of communication devices and network connections. TOSHIBA ConfigFree also allows you to find communication problems and create profiles for easy switching between locations and communication networks. To start ConfigFree, click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Networking** and click **ConfigFree**.

### TOSHIBA Dual Pointing Device utility
This utility has the following functions:
To disable/enable TOSHIBA Dual Pointing Device with **Fn + F9** keys. To customize the functions of TOSHIBA Dual Pointing Device easily.
**TOSHIBA Mic Effect**

TOSHIBA Mic Effect is a utility used to enable comfortable calls with echo cancellation function. The echo cancellation function removes or reduces any harsh echoes or howling sounds that occur when playing audio sounds recorded with a microphone through the speakers. The echo cancellation function is available only when you use telephony software such as Windows Messenger with a voice conversation function.

For more instructions for this software, click start, point to All Programs, point to TOSHIBA, point to Utilities and click TOSHIBA Mic Effect Help.

**TOSHIBA RAID Console**

If a secondary hard disk drive is installed in the Ultra Slim Bay in addition to the built-in HDD, you can use the TOSHIBA RAID Console to create or manage a RAID array.

To start the utility, click start, point to All Programs, point to TOSHIBA, point to RAID and click RAID Console.

It is possible to change to RAID1 (mirroring) from a non-RAID configuration (default).

To change to RAID0 (striping), restore your pre-installed software using the Product Recovery DVD-ROM. Please refer to Restoring the preinstalled software section in Chapter 3, Getting Started, for details.

Caution: When RAID0 or RAID1 is set, you cannot change your setting unless you completely restore your preinstalled software.

It is strongly recommended to read the TOSHIBA RAID Help before you change any of the settings.

**NVIDIA Rotation Settings**

This utility let you rotate the desktop by 0 and 180 easily. It can rotate by clicking the icon in a taskbar or pressing Ctrl + Shift + R. In a multi-monitor setup, the display that contains the cursor is effective.

**TOSHIBA Password Utility**

This utility lets you set a password that restricts access to the computer.

**TOSHIBA Accessibility**

This utility lets you make the Fn key sticky, that is, you can press it once, release it, and they press an "F number" key. The Fn key remains active until another key is pressed.
Introduction

Options

You can add a number of options to make your computer even more powerful and convenient to use. The following options are available:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DLA for TOSHIBA</td>
<td>DLA (Drive Letter Access) is the packet writing software which provides the function, which writes files and/or folders to DVD-RW, CD-RW and DVD+RW discs via a drive letter like a floppy disk or other removable disks.</td>
</tr>
<tr>
<td>TOSHIBA Hotkey Utility for Display Devices</td>
<td>This utility has the change of a display device, and the function to change display resolution. Press <strong>Fn + F5</strong> to change the active display device. Press <strong>Fn + Space</strong> keys to change the display resolution.</td>
</tr>
<tr>
<td>TOSHIBA SD Memory Card Format</td>
<td>The TOSHIBA SD memory boot utility allows you to create a bootable SD memory card.</td>
</tr>
<tr>
<td>CD/DVD Drive Acoustic Silencer</td>
<td>This utility allows you to configure the read speed of CD drive. You can either configure Normal Mode, which operates the drive at its maximum speed for quick data access, or Quiet Mode which runs at single speed for CD audio and which can lessen operational noise. It is ineffective in DVD.</td>
</tr>
</tbody>
</table>

**Memory expansion**

A 256, 512 or 1,024 MB memory module (DDR2-533/400) can easily be installed in the computer.

**Battery pack**

An additional battery pack can be purchased from your TOSHIBA dealer. Use it as a spare or replacement.

**High capacity battery pack**

An additional battery pack can be purchased from your TOSHIBA dealer. Use it as a spare or replacement.

**AC adaptor**

If you use your computer at more than one site frequently, it may be convenient to purchase an additional AC adaptor for each site so you will not have to carry the adaptor with you.

**Battery charger**

The battery charger lets you charge extra batteries outside the computer.

**Security lock**

A slot is available to attach a security cable to the computer to deter theft.
## Introduction

### USB floppy disk Kit
The USB floppy disk drive accommodates either 3 1/2" 1.44-megabyte or 720-kilobyte floppy disks through connection to a USB port. Please note that you cannot format 720-kilobyte floppy disks under Windows XP, but you are able to use disks that have been previously formatted.

### Advanced Port Replicator III
The Advanced Port Replicator III provides the ports available on the computer in addition to separate PS/2 mouse and PS/2 keyboard ports, a digital visual interface (DVI) port, i.LINK™ (IEEE1394) port, line-in jack and line-out jack, External monitor port, Universal Serial Bus port (USB2.0) × 4, LAN jack, Modem jack, Serial port, Parallel port.

### Hard disk drive
You can increase your computer’s data storage capacity with additional hard disk drives. They are available in the following sizes:
- 80 billion bytes (74.53 GB)
- 100.0 billion bytes (93.16 GB)

### Wireless LAN Kit
This option enables wireless LAN functions in computers that do not have wireless preinstalled. It is installed by dealers only.

### Bluetooth Kit
This option enables Bluetooth wireless communications in computers that do not have Bluetooth preinstalled. It is installed by dealers only.

### Ultra Slim Bay HDD adaptor (Black)
An adaptor lets you install an optional hard disk drive described in Chapter 8, *Optional Devices*.

### Hard disk drive
You can increase your computer’s data storage capacity with an additional 80 billion bytes (74.53 GB) and 100.0 billion bytes (93.16 GB) hard disk drive in the Ultra Slim Bay HDD adaptor.

---

**Ultra Slim Bay options**

The following modules can be installed in the Ultra Slim Bay. All other modules are options.

<table>

Chapter 2

The Grand Tour

This chapter identifies the various components of your computer. Become familiar with each component before you operate the computer.

Disclaimer (Non-applicable Icons)

Certain notebook chassis are designed to accommodate all possible configurations for an entire product series. Therefore, please be aware that your selected model may not have all the features and specifications corresponding to all of the icons or switches shown on the notebook chassis.

Front with the display closed

The following figure shows the computer’s front with its LCD display panel in the closed position.

<table>
<thead>
<tr>
<th>System indicators</th>
<th>These LEDs let you monitor the status of various computer functions. Details are given in the System indicators section.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wireless communication switch</td>
<td>Slide this switch to the left to turn off Wireless LAN and Bluetooth functions. Slide it to the right to turn on the functions.</td>
</tr>
</tbody>
</table>

Front of the computer with LCD display panel closed
Turn WiFi and Bluetooth functionalities off when near a person who may have a cardiac pacemaker implant or other medical electric device. Radio waves may affect pacemaker or medical device operation, possibly resulting in serious injury. Follow the instruction of your medical device when using any WiFi or Bluetooth functionality.

Always turn off WiFi or Bluetooth functionality if the PC is near automatic control equipment or appliances such as automatic doors or fire detectors. Radio waves can cause malfunction of such equipment, possibly resulting in serious injury.

Do not use the WiFi or Bluetooth functionalities near a microwave oven or in areas subject to radio interference or magnetic fields. Interference from a microwave oven or other source can disrupt WiFi or Bluetooth operation.

<table>
<thead>
<tr>
<th>i.LINK (IEEE1394) port</th>
<th>This port allows you to connect an external device, such as a digital video camera for high-speed data transfer.</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Infrared port</td>
<td>This infrared port is compatible with Infrared Data Association (IrDA 1.1) standards. It enables cableless 4 Mbps, 1.15 Mbps, 115.2 kbps, 57.6 kbps, 38.4 kbps, 19.2 kbps or 9.6 kbps data transfer with IrDA 1.1 compatible external devices.</td>
</tr>
<tr>
<td>Microphone</td>
<td>A built-in microphone lets you record sound into your applications. Refer to the Sound system section in Chapter 4, Operating Basics.</td>
</tr>
</tbody>
</table>
Left side

The following figure shows the computer's left side.

Security lock slot
An optional security cable attaches to this slot. The security cable anchors your computer to a desk or other large object to deter theft.

LAN jack
This jack lets you connect to a LAN. The adaptor has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T). The LAN has two indicators. Refer to Chapter 4, Operating Basics, for details.

Do not connect any cable other than a LAN cable to the LAN jack. It could cause damage or malfunction.

Do not connect the LAN cable to a power supply. It could cause damage or malfunction.

Link indicator (green)
This indicator glows green when the computer is connected to a LAN and the LAN is functioning properly.

LAN active indicator (orange)
This indicator glows orange when data is being exchanged between the computer and the LAN.

Cooling vents
Cooling vents help CPU keep from overheating.

Do not block the cooling vents. Never allow metal objects, such as screws, staples and paper clips, to enter the PC or keyboard. Foreign metal objects can create a short circuit, which can cause PC damage and fire, possibly resulting in serious injury.
<table>
<thead>

---

**WARNING**

Keep foreign objects out of the USB connectors. Never allow metal objects, such as screws, staples and paper clips, to enter the PC or keyboard. Foreign metal objects can create a short circuit, which can cause PC damage and fire, possibly resulting in serious injury.

---

**NOTICE**

Operation of all functions of all USB devices has not been confirmed. Some functions might not execute properly.

---

### Modem jack

The modem jack lets you use a modular cable to connect the modem directly to a telephone line.

---

**WARNING**

- Connection to any communication line other than an analog phone line could cause a PC system failure.
- Connect the built-in modem only to ordinary analog phone lines.
- Never connect the built-in modem to a digital line (ISDN).
- Never connect the built-in modem to the digital connector on a public telephone or to a digital private branch exchange (PBX).
- Never connect the built-in modem to a key telephone system for residences or offices.
- Never operate your PC on AC power during a thunderstorm. If you see lightning or hear thunder, immediately turn off the PC. An electric surge caused by the storm, may result in a system failure, loss of data or hardware damage.

</tbody>
</table>

*Keep foreign objects out of the docking port. A pin or similar object can damage the computer’s circuitry. A plastic shutter protects the connector.*
## Ultra Slim Bay
See the Right side section in this chapter for details.

## Ultra Slim Bay latch
Slide the latch to release or secure the Ultra Slim Bay ejector.

---

---

**Be sure to lock the Ultra Slim Bay latch before you transport or carry the computer.**

---

## Ultra Slim Bay lock screw
One screw secures the Ultra Slim Bay lock.

## Memory module cover
This cover protects memory module sockets. Refer to the Memory expansion section in Chapter 8, Optional Devices.

## HDD pack cover screw
One screw secures the HDD cover.

## Hard disk drive
This contains a Hard disk drive pack, which can be removed and reinstalled. For more information on how to remove or reinstall the Hard disk drive pack, refer to the section on the in Chapter 8, Optional Devices.
Front with the display open

This section shows the computer with the LCD display panel open. To open the display, slide the display latch on the front of the LCD display panel and lift up. Position the LCD display panel at a comfortable viewing angle.

**Display hinge**  The display hinge holds the LCD display panel at easy-to-view angles.

**Fingerprint Sensor**  Just by swiping the finger against the fingerprint sensor, the following functions will be enabled:
- Logon to Windows and access a security-enabled homepage through IE (Internet Explorer).
- Files and folders can be encrypted/decrypted and third party access to them prevented.
- Disable the password-protected screen-saver when returning from power-saving (standby) mode.
- System boot authentication and Single Touch Boot feature.
- Authentication of the User Password and Hard Disk Drive Password when booting up the computer.
### Display screen
The LCD screen displays high-contrast text and graphics. The available resolution depends on the model. With XGA, you can change the resolution between 800 × 600 and 1024 × 768 pixels. With SXGA, between 800 × 600 and 1400 × 1050 pixels. Refer to Appendix B, *Display Controller and Modes*.

When the computer operates on the AC adaptor the LCD screen’s image will be somewhat brighter than when it operates on battery power. The lower brightness level is intended to save battery power.

### Stereo speakers
The speakers emit sound generated by your software as well as audio alarms, such as low battery condition, generated by the system.

### AccuPoint control buttons
Control buttons below the keyboard let you select menu items or manipulate text and graphics designated by the on-screen pointer. Refer to the *Using the AccuPoint* section in Chapter 4, *Operating Basics*.

### AccuPoint
A pointer control device located in the center of the keyboard is used to control the on-screen pointer. Refer to the *Using the AccuPoint* section in Chapter 4, *Operating Basics*.

### Touch Pad control buttons
Control buttons below the Touch Pad let you select menu items or manipulate text and graphics designated by the on-screen pointer.

### Touch Pad
A Touch Pad located in the center of the palm rest is used to control the on-screen pointer. Refer to the *Using the Touch Pad* section in Chapter 4, *Operating Basics*. 
### TOSHIBA Presentation button

Press this button to change internal display, simultaneous display, or multi-monitor display. The default setting is the simultaneous display on LCD and CRT with resolution of $1024 \times 768$. When you press this button twice, the display mode returns to single display on LCD only. Setting of multi-monitor display in Windows XP, computer changes its display mode to the multi-monitor display on LCD and CRT. You can also return to single display by pressing this button twice.

The setting of TOSHIBA Presentation button can be changed through the properties of TOSHIBA Controls. Display mode is changed to the multi-monitor display by selecting “Different Image” (Windows XP only) or to the simultaneous display on internal and external display by selecting “Same Image”.

### TOSHIBA Assist button

Press this button to launch the program automatically. When power-off, stand-by and hibernation, press this button to start the computer and launch the program.

You can select the function on TOSHIBA Controls properties.

The default is TOSHIBA Assist.

### Power button

Press the power button to turn the computer’s power on and off.

### LCD Sensor switch

This switch senses when the computer’s LCD display panel is closed or opened and activates the Panel Power Off/On feature. When you close the LCD display panel the computer enters Hibernation Mode and shuts down. When you open the computer’s LCD display panel the computer starts in Hibernation Mode. Use the TOSHIBA Power Saver Utility to enable or disable this feature. The default is “enabled”.

Refer to the TOSHIBA Power Saver Utility and Panel Power Off/On items in Chapter 1, Special features, for details on settings.

---

*Do not put a magnetic object close to the switch. The computer will automatically enter Hibernation Mode and shut down even if the Panel Power Off features is disabled.*
System indicators

LEDs beneath icons, light when various computer operations are in progress.

SD card
The **SD card** indicator glows green when the computer is accessing the SD card slot.

DC IN
The **DC IN** indicator glows green when DC power is supplied from the AC power adaptor. If the adaptor’s output voltage is abnormal or if the power supply malfunctions, this indicator flashes orange.

Power
The **Power** indicator glows green when the computer is on. If you select **Standby** from **Shut Down Windows**, this indicator flashing (one second on, two seconds off) while the computer shuts down.

Battery
The **Battery** indicator shows the condition of the battery’s charge: Green indicates full charge, orange indicates battery charging and flashing orange indicates a low battery charge. Refer to Chapter 6, **Power and Power-Up Modes**.

HDD
The **HDD** indicator glows green when the computer is accessing the built-in hard disk drive.

Wireless communication
The **Wireless communication** indicator glows when the Bluetooth and wireless LAN functions are turned on.
Keyboard indicators

The figures below show the positions of the keypad overlay indicators and the Caps Lock indicator.

When the Arrow mode indicator glows the keypad overlay lets you control the cursor.

When the Numeric mode indicator glows the keypad overlay lets you enter numbers.

When the Caps Lock indicator glows the keyboard is in all-caps mode.

<table>
<thead>
<tr>
<th>Caps Lock</th>
<th>This indicator glows green when the alphabet keys are locked in uppercase.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Arrow mode</th>
<th>When the Arrow mode indicator lights green, you can use the keypad overlay (gray labeled keys) as cursor keys. Refer to the Keypad overlay section in Chapter 5, The Keyboard.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Numeric mode</th>
<th>You can use the keypad overlay (gray labeled keys) for numeric input when the Numeric mode indicator lights green. Refer to the Keypad overlay section in Chapter 5, The Keyboard.</th>
</tr>
</thead>
</table>
USB floppy disk drive (optional)

The optional USB floppy disk drive accommodates 1.44-megabyte or 720-kilobyte floppy disks and connects to the USB port.

**USB connector**
Insert this connector into one of the USB ports of your computer.

**Disk-In-Use Indicator**
This indicator lights when the floppy disk is being accessed.

**Floppy disk slot**
Insert a floppy disk in this slot.

**Eject button**
When a floppy disk is fully seated in the drive, the eject button pops out. To remove a floppy disk, push in the eject button and the floppy disk pops out partially for removal.

*Check the Disk-In-Use indicator when you use the USB floppy disk drive. Do not press the eject button or turn off the computer while the light is glowing. Doing so could destroy data and damage the floppy disk or the drive.*

*The USB floppy disk drive should be placed on a flat, horizontal surface when in use. Do not set the drive on an incline greater than 20° while it is operating.*

*Do not set anything on top of the floppy disk drive.*
Optical media drives

One of the following optical media drives is installed in the computer: DVD-ROM&CD-R/RW and DVD Super Multi drives. An ATAPI interface controller is used for CD/DVD-ROM operation. When the computer is accessing a CD/DVD, an indicator on the drive glows.

For information on loading and unloading discs refer to the Using optical media drives section in Chapter 4, Operating Basics.

Region codes for DVD drives and media

DVD-ROM&CD-R/RW, DVD Super Multi drives and media are manufactured according to the specifications of six marketing regions. When you purchase DVD-Video, make sure it matches your drive, otherwise it will not play properly.

Writable discs

This section describes the types of writable CD/DVD discs. Check the specifications for your drive to for the type of discs it can write. Use RecordNow! to write compact discs. Refer to Chapter 4, Operating Basics.

CDs

- CD-R discs can be written only once. The recorded data cannot be erased or changed.
- CD-RW discs including multi speed CD-RW discs, high-speed CD-RW discs and ultra-speed CD-RW discs can be recorded more than once.

DVDs

- DVD-R and DVD+R discs can be written only once. The recorded data cannot be erased or changed.
- DVD-RW, DVD+RW and DVD-RAM discs can be recorded more than once.
The Grand Tour

Formats

The drives support the following formats:

- CD-ROM
- DVD-ROM
- CD-DA
- Photo CD™
  (single/multi-session)
- CD-ROM XA Mode 2
  (Form1, Form2)
- DVD -Video
- CD-Text
- CD-ROM Mode 1, Mode 2
- Enhanced CD (CD-EXTRA)
- Addressing Method 2

DVD-ROM&CD-R/RW drive

The full-size DVD-ROM&CD-R/RW drive module lets you record data to rewritable CDs as well as run either 12 cm (4.72”) or 8 cm (3.15”) CD/DVDs without using an adaptor.

The read speed is slower at the center of a disc and faster at the outer edge.

DVD Super Multi drive

The full-size DVD Super Multi drive module lets you record data to rewritable CDs as well as run either 12 cm (4.72”) or 8 cm (3.15”) CD/DVDs without using an adaptor.

The read speed is slower at the center of a disc and faster at the outer edge.

</table>
AC adaptor

The AC adaptor can automatically adjust to any voltage ranging from 100 to 240 volts and to a frequency of either 50 or 60 hertz, enabling you to use this computer in almost any country/region. The adaptor converts AC power to DC power and reduces the voltage supplied to this computer. To recharge the battery, simply connect the AC adaptor to a power source and the computer. Refer to Chapter 6, *Power and Power-Up Modes* for details.

*The Universal AC Adaptor and power cord bundled with your computer may vary: depending on the model purchased, a 2-pin plug or 3-pin plug set (shown in the above figures) may be bundled.*

*Do not use a 3-pin to 2-pin conversion plug.*

*The supplied power cord conforms to safety rules and regulations in the region the product is bought and should not be used outside this region. For use in other regions, please buy power cords that conform to safety rules and regulations in the particular region.*

*Always use the Toshiba AC adaptor that was provided with your PC and the Toshiba Battery Charger (that may have been provided with your PC), or use Toshiba recommended alternate models to avoid any risk of fire or other damage to the PC. Use of an incompatible AC adaptor or Battery Charger could cause fire or damage to the PC possibly resulting in serious injury.*
Chapter 3

Getting Started

This chapter provides basic information to get you started using your computer. It covers the following topics:

- Setting up your work space - for your health and safety

Be sure also to read Instruction Manual for Safety & Comfort. This guide, which is included with the computer, explains product liability.

- Connecting the AC adaptor
- Opening the display
- Turning on the power
- Starting up for the first time
- Turning off the power
- Restarting the computer
- Restoring the preinstalled software

All users should be sure to read the section Starting up for the first time.

Setting up your work space

Establishing a comfortable work site is important for you and your computer. A poor work environment or stressful work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. Proper ambient conditions should also be maintained for the computer’s operation. This section discusses the following topics:

- General conditions
- Placement of the computer
- Seating and posture
- Lighting
- Work habits
General conditions

In general, if you are comfortable, so is your computer, but read the following to make sure your work site provides a proper environment.

- Select a work area that has:
  - a well-designed and functioning ventilation system that does not forcefully direct air on you
  - good air circulation
  - a comfortable ambient temperature and relative humidity.

- Never place your PC where it will be exposed to excess heat, such as in direct sunlight, an unventilated vehicle or near a heater. This may result in a system failure, malfunction, loss of data or damage to PC.

- Never place your PC in a location where it will be exposed to extremely low temperatures. This may result in a system failure, malfunction or loss of data.

- Never subject your PC to sudden temperature variations. This may result in condensation, causing a system failure, malfunction or loss of data.

- Do not expose your PC to dusty environments. If dust gets inside the PC, it could cause a system failure, malfunction or loss of data. If dust contaminates the PC, do not turn on the power. Take it to an authorized Toshiba service provider before you use it.

- Never place your PC near an object that generates a magnetic field, such as a speaker or TV. Do not wear magnetic bracelets while using your PC. Exposure to magnetic fields can cause system failure, malfunction or loss of data.

- Never place a heavy object on the PC and be careful not to drop a heavy object onto the PC. It could damage the PC or cause system failure.

- Never use benzene, thinner or other chemicals when cleaning the PC, AC adaptor, or storage device. The use of benzene, thinner or other chemicals may result in deterioration, deformation or discoloration of those items and the loss of data.

- Make sure the AC power cord connects to an outlet that is close to the computer and easily accessible.

- The temperature should be 5 to 35 degrees Centigrade (41 to 95 degrees Fahrenheit) and the relative humidity should be 20 to 80 percent.

- Keep the computer free of dust, moisture, and exposure to direct sunlight.

- Some parts of the computer, including data storage media, can be damaged by magnets. Do not place the computer near magnetic objects or bring magnetic objects close to the computer. Be careful of objects, such as stereo speakers, that produce strong magnetic fields during operation. Also, be careful with metal objects, such as bracelets, which can be inadvertently magnetized.

- Do not operate the computer in close proximity to a mobile phone.
■ Leave ample ventilation room for the fan. Do not block the vents.
■ If the PC interferes with radio equipment, turn the PC power off immediately. Such interference could cause equipment malfunction.
■ Never place your PC on a shaky table, uneven, tilted surface or other unstable location. Your PC may fall, causing damage to the PC or possibly injury.
■ Never leave the power to your PC on continuously for more than 24 hours. Turn the power off when this product is not in use.
■ Always avoid abrupt changes of temperature or humidity.
■ Never place close to heat radiating appliances such as a heater.
■ Never place close to corrosive chemicals.
■ Never place close to magnetic field radiating appliances such as a stereo speaker.
■ Always place this product on a flat surface.
■ Provide a sufficient space behind the PC to allow easy adjustment of the display panel.
■ Always provide sufficient space around the PC to ensure adequate ventilation.
■ Always provide sufficient space for operating a mouse and other peripheral devices.

**Placement of the computer**

Position the computer and peripheral devices to provide comfort and safety.

■ Position your LCD display panel or place your monitor in an appropriate position to help reduce awkward postures and overhead glare. For example:
  ■ Position LCD directly in front of you and at a comfortable distance away.
  ■ Position LCD so the top of the screen is at or slightly below eye level. A display screen that is too high or too low can cause awkward postures and possibly fatigue muscles that support the head.
  ■ Rest your eyes periodically by focusing on objects that are farther away.
  ■ If you use a paper holder, set it at about the same height and distance as the computer.
Seating and posture

Maintain a comfortable working posture when using your PC where your body joints are naturally aligned to reduce stress on different parts of your body. Consider the following:

- Keep hands, wrists, and forearms straight, in-line and roughly parallel to the floor.
- Keep head level, or bent slightly forward, forward facing, and balanced. Generally the head is in-line with the torso.
- Keep shoulders relaxed and let upper arms hang normally at the side of the body.
- Keep elbows in close to the body and bent.
- Keep feet fully supported by floor or foot rest.
- Keep back fully supported with appropriate lumbar support when sitting vertical or leaning back slightly.
- Keep thighs and hips supported by a well-padded seat cushion and generally parallel to the floor.
- Keep knees about the same height as the hips with the feet slightly forward.

**Lighting**

Select the right level of illumination and place your PC appropriately to minimize glare from overhead lights, desk lamps and windows. Glare on the LCD or monitor may cause eye strain, eye fatigue or headaches.

Consider the following suggestions regarding lighting your work environment:

- Position the PC so that the light source does not shine or reflect directly onto the display or shine or reflect directly into the eyes of the user.
- Shield the PC from direct light by using tinted windows or by installing blinds or a screen.
- Use soft, indirect lighting.
- Adjust the display panel to provide maximum visibility.

**Work habits**

A key to avoiding discomfort or injury from repetitive strain is to vary your activities. If possible, schedule a variety of tasks into your workday. If you must spend long periods at the computer, finding ways to break up the routine can reduce stress and improve your efficiency.

- Sit in a relaxed posture. Good positioning of your chair and equipment as described earlier can reduce tension in your shoulders or neck and ease back strain.
- Vary your posture frequently.
- Occasionally stand up and stretch or exercise briefly.
- Exercise and stretch your wrists and hands a number of times during the day.
- Frequently, look away from the computer and focus your eyes on a distant object for several seconds, for example 30 seconds every 15 minutes.
- Take frequent short breaks instead of one or two long breaks, for example, two or three minutes every half hour.
- When you use a PC, rest your eyes periodically and relax or stretch your muscles to avoid strain. If you experience discomfort while operating the PC, stop immediately and rest. Continuous operation for long periods without adequate rest may cause pain in the arms, wrists, hands, back, neck or other parts of the body. If pain persists despite rest, consult your doctor.

A number of books are available on ergonomics and repetitive strain injury or repetitive stress syndrome. For more information on these topics or for pointers on exercises for such stress points as hands and wrists, please check with your library or book vendor. Also refer to the computer’s *Instruction Manual for Safety & Comfort.*
Strategic Rest Breaks

Take short, strategically spaced rest breaks to avoid eye strain and body discomforts.

For more specific recommendations on the safety and comfort of your computer environment, customers in the United States may visit the United States Department of Labor, Occupational Safety & Health Administration website at: http://www.osha.gov/SLTC/etools/computerworkstations/

Other Things to Note

■ Never turn off the power while an application is running. Doing so could cause loss of data.
■ Use a virus-check program and make sure it is updated regularly.
■ Never turn off the power, disconnect an external storage device or remove storage media during data read/write. Doing so can cause data loss.
■ Never format storage media without checking its content. Formatting destroys all stored data.
■ It is a good idea to periodically back up the internal hard disk or other main storage device to external media. General storage media is not durable or stable over long periods of time and under certain conditions may result in data loss.
■ Before you install a device or application, save any data in memory to the hard disk drive or other storage media. Failure to do so may result in the loss of data.

Connecting the AC adaptor

Attach the AC adaptor when you need to charge the battery or you want to operate from AC power. It is also the fastest way to get started, because the battery pack will need to be charged before you can operate from battery power.

The AC adaptor can be connected to any power source supplying from 100 to 240 volts and 50 or 60 hertz. For details on using the AC adaptor to charge the battery pack, refer to Chapter 6, Power and Power-Up Modes.
Always use the Toshiba AC adaptor that was provided with your PC and the Toshiba Battery Charger (that may have been provided with your PC), or use Toshiba recommended alternate models to avoid any risk of fire or other damage to the PC. Use of an incompatible AC adaptor or Battery Charger could cause fire or damage to the PC possibly resulting in serious injury.

Use only the AC adaptor supplied with your computer or an equivalent adaptor that is compatible. Use of any incompatible adaptor could damage your computer. TOSHIBA assumes no liability for any damage caused by use of an incompatible adaptor.

Never plug the AC adaptor or Battery Charger into a power source that does not correspond to both the voltage and the frequency specified on the regulatory label of the unit. Failure to do so could result in a fire or electric shock, possibly resulting in serious injury.

Always use or purchase power cables that comply with the legal voltage and frequency specifications and requirements in the country of use. Failure to do so could result in a fire or electric shock, possibly resulting in serious injury.

The supplied power cord conforms to safety rules and regulations in the region the product is bought and should not be used outside this region. For use in other regions, please buy power cords that conform to safety rules and regulations in the particular region.

Do not use a 3-pin to 2-pin conversion plug.

When you connect the AC adaptor to the computer, always follow the steps in the exact order as described in the User’s Manual. Connecting the power cable to a live electrical outlet should be the last step otherwise the adaptor DC output plug could hold an electrical change and cause an electrical shock or minor bodily injury when touched. As a general safety precaution, avoid touching any metal parts.

Never place an AC adaptor on a wooden surface, furniture, or any other surface that could be marred by exposure to heat since the AC adaptor’s surface temperature increases during normal use.

Always place the PC on a suitable heat-insulating material to prevent possible heat damage.

1. Connect the power cord to the AC adaptor.

[Image: Connecting the power cord to the AC adaptor (2-pin plug)]
Getting Started

2. Connect the AC adaptor’s DC output plug to the DC IN 15V jack on the back of the computer.

3. Plug the power cord into a live wall outlet. The Battery and DC IN indicators on the front of the computer should glow.

Opening the display

The computer’s LCD display panel can be rotated in a wide range of angles for optimal viewing.

1. Slide the display latch on the front of the computer to unlatch the display panel.
2. While holding down the palm rest with one hand so that the main body is not raised, lift the panel slowly. Adjust the angle of the panel to provide optimal clarity.

Use reasonable care when opening and closing the LCD display panel. Opening it vigorously or slamming it shut could damage the computer.
Opening the LCD display panel

Turning on the power

This section describes how to turn on the power. The Power button LED indicates the status. Refer to the Power indicators section in Chapter 6, Power and Power-Up Modes.

- After you turn on the power for the first time, do not turn it off until you have set up the operating system. Refer to the section Starting up for the first time.
- If the USB floppy disk drive is connected, make sure it is empty. If a floppy disk is in the drive, press the eject button and remove the floppy disk.

3. Open the computer’s LCD display panel.
4. Press and hold the computer’s power button for two or three seconds.
Starting up for the first time

When you first turn on the power, the computer's initial screen is the Microsoft Windows XP Startup Screen Logo. Follow the on-screen directions for each screen. During setup, you can click the Back button to return to the previous screen.

Be sure to read the Windows End User License Agreement display carefully.

Turning off the power

The power can be turned off in one of the following modes: Shut down (Boot), Hibernation or Standby Mode.

Shut Down mode (Boot mode)

When you turn off the power in Shut Down mode no data is saved and the computer will boot to the operating system’s main screen.

1. If you have entered data, save it to the hard disk or to a floppy disk.
2. Make sure all disk (disc) activity has stopped, then remove the CD/DVDs or floppy disk.
3. Click start then click Turn Off Computer. From the Turn Off Computer menu select Turn Off.
4. Turn off the power to any peripheral devices.

Do not turn the computer or devices back on immediately. Wait a moment to let all capacitors fully discharge.
Standby Mode

If you have to interrupt your work, you can turn off the power without exiting from your software. Data is maintained in the computer’s main memory. When you turn on the power again, you can continue working right where you left off.

- **When the AC adaptor is connected, the computer will go into Standby Mode according to the settings in the TOSHIBA Power Saver utility.**
- **To restore operation from Standby Mode, press the power button or press any key. The latter action only works on the internal keyboard if the Wake-up on Keyboard option is enabled in HW Setup.**
- **If the computer automatically enters Standby Mode while a network application is active, the application might not be restored when the computer wakes up from Standby.**
- **To prevent the computer from automatically entering Standby Mode, disable Standby in TOSHIBA Power Saver. That action, however, will nullify the computer’s Energy Star compliance.**
- **Before entering Standby Mode, be sure to save your data.**
- **Do not install or remove a memory module while the computer is in Standby Mode. The computer or the module could be damaged.**
- **Do not remove the battery pack while the computer is in Standby Mode (unless the computer is connected to an AC power source). Data in memory will be lost.**
- **If you carry the computer on board an aircraft or into a hospital, be sure to shut down the computer in Hibernation Mode or in shutdown mode to avoid radio signal interference.**

Benefits of standby

The standby feature provides the following benefits:

- Restores the previous working environment more rapidly than does hibernation.
- Saves power by shutting down the system when the computer receives no input or hardware access for the duration set by the System Standby feature.
- You can use the panel power off feature.
Executing standby

You can also enable Standby by pressing \texttt{Fn + F3}. See Chapter 5, The Keyboard, for details.

You can enter Standby Mode in one of three ways:
1. Click \texttt{start}, click \texttt{Turn Off Computer} and click \texttt{Stand By}.
2. Close the computer’s LCD display panel. This feature must be enabled. Refer to the Setup Actions tab in TOSHIBA Power Saver described in the Control Panel.
   Open Performance and Maintenance and open TOSHIBA Power Saver.
3. Press the power button. This feature must be enabled. Refer to the Setup Actions tab in TOSHIBA Power Saver described in the Control Panel.
   Open Performance and Maintenance and open TOSHIBA Power Saver.

When you turn the power back on, you can continue where you left when you shut down the computer.

- When the computer is shut down in Standby Mode, the power indicator blinking orange.
- If you are operating the computer on battery power, you can lengthen the operating time by shutting down in Hibernation Mode. Standby Mode consumes more power.

Standby limitations

Standby will not function under the following conditions:

- Power is turned back on immediately after shutting down.
- Memory circuits are exposed to static electricity or electrical noise.

Hibernation Mode

The Hibernation Mode feature saves the contents of memory to the hard disk when the computer is turned off. The next time the computer is turned on, the previous state is restored. The Hibernation Mode feature does not save the status of any peripheral devices.

- Save your data. While entering Hibernation Mode, the computer saves the contents of memory to the hard disk drive. However, for safety sake, it is best to save your data manually.
- Data will be lost if you remove the battery or disconnect the AC adaptor before the save is completed. Wait for the HDD indicator to go out.
- Do not install or remove a memory module while the computer is in Hibernation Mode. Data will be lost.
Benefits of Hibernation Mode

The Hibernation Mode feature provides the following benefits:

- Saves data to the hard disk when the computer automatically shuts down because of a low battery.

For the computer to shut down in Hibernation Mode, this feature must be enabled in two places: the Hibernate tab in Power Options and Setup Actions tab in TOSHIBA Power Saver.

If you do not configure this feature, the computer will shut down in Standby Mode - if battery power becomes depleted, data saved in Standby Mode will be lost.

- You can return to your previous working environment immediately when you turn on the computer.
- Saves power by shutting down the system when the computer receives no input or hardware access for the duration set by the System hibernate feature.
- You can use the panel power off feature.

Starting Hibernation Mode

You can also enable Hibernation Mode by pressing Fn + F4. Refer to Chapter 5, The Keyboard, for details.

To enter Hibernation Mode, follow the steps below.

1. Click start.
2. Select Turn Off Computer.
3. In the Turn Off Computer dialog box, select Hibernate.

Automatic Hibernation

The computer will enter Hibernate mode automatically when you press the power button or close the lid. First, however, make the appropriate settings according to the steps below.

1. Click start and open the Control Panel.
2. Open Performance and Maintenance and open Power Options.
3. Select the Hibernate tab in the Power Options Properties window, activate the Enable hibernation check box and click the Apply button.
4. Open TOSHIBA Power Saver.
5. Select the Setup Actions tab.
6. Enable the desired Hibernation settings for When I press the power button and When I close the lid.
7. Click the OK button.
Data save in Hibernation Mode

When you turn off the power in Hibernation Mode, the computer takes a moment to save current memory data to the hard disk. During this time, the HDD indicator will light.

After you turn off the computer, and the content of memory has been saved to the hard disk, turn off the power to any peripheral devices.

Do not turn the computer or devices back on immediately. Wait a moment to let all capacitors fully discharge.

Restarting the computer

Certain conditions require that you reset the system. For example, if:

- You change certain computer settings.
- An error occurs and the computer does not respond to your keyboard commands.
- There are three ways to reset the computer system:
  1. Click start then click Turn off computer. From the Turn off computer menu select Restart.
  2. Press Ctrl + Alt + Del to display the Windows Task Manager, then select Shut Down and Restart.
  3. Press the power button and hold it down for five seconds. Wait 10 to 15 seconds, then turn the power on again by pressing the power button.

Restoring the preinstalled software

Restoring the complete system

To restore the operating system and all preinstalled software, follow the steps below.

When sound mute is turned ON by the Fn + Esc key, turn OFF before starting restore. Refer to Chapter 5, The Keyboard, for details.

When you reinstall the Windows operating system, the hard disk will be reformatted and all data will be lost.

1. Load the Product Recovery DVD-ROM in the optical media drive and turn off the computer’s power.
2. Hold down the F12 key and turn on the power. When In Touch with Tomorrow TOSHIBA appears, release the F12 key.
3. Use the left or right cursor key to select the CD-ROM icon in the displayed menu.
4. Follow the on-screen instructions.
5. If your computer came with additional software installed, this software can not be recovered from the Product Recovery DVD-ROM. Re-install these applications (e.g. Works Suite, DVD Player, Games, etc.) separately from other media.

Restoring TOSHIBA utilities and drivers

If Windows is working properly, individual drivers or applications can be separately restored. The TOSHIBA Tools & Utilities folder (C:\TOOLS\CD) contains drivers and applications, which are included with your computer system. If your system drivers or applications have become damaged in some way, you can reinstall most of the components from this folder.

Create a copy of this folder to an external media for more convenience.
Operating Basics

This chapter describes the basic operations of your computer and precautions when using it, as well as the handling of CD/DVD.

TOSHIBA Dual Pointing Device

The computer is equipped with a dual point system: a Touch Pad and an AccuPoint pointing stick.

Using the Touch Pad

To use the Touch Pad, simply touch and move your fingertip across it in the direction you want the on-screen pointer to go.
Two buttons below the Touch Pad are used like the buttons on a mouse pointer. Press the left button to select a menu item or to manipulate text or graphics designated by the pointer. Press the right button to display a menu or other function depending on the software you are using.

You can also tap the Touch Pad to perform functions similar to those of the left button.

- **Click**: Tap once
- **Double-click**: Tap twice
- **Drag and drop**: Tap to select the material you want to move. Leave your finger on the Touch Pad after the second tap and move the material.

### Using the AccuPoint

To use the AccuPoint, simply push it with your finger tip in the direction you want to move the on-screen pointer.

Two buttons above the Touch Pad work in the same way with the AccuPoint as they do with the Touch Pad. Refer to the *Using the Touch Pad* section for details.

### AccuPoint precautions

Certain conditions can affect the on-screen pointer when using AccuPoint. For example, the pointer may travel contrary to AccuPoint operation or an error message may appear, if

- You touch the AccuPoint during power-up.
- You apply constant, soft pressure during power-up.
- There is a sudden temperature change.
- Strong stress is applied to the AccuPoint.

If an error message appears, reboot the computer. If an error message does not appear, wait a moment for the pointer to stop, then continue operation.
Replacing the cap

The AccuPoint cap is an expendable item that should be replaced after prolonged use. A spare AccuPoint cap is supplied with the computer.

1. To remove the AccuPoint cap, firmly pinch the cap and pull it straight up.

2. Position a new cap on the peg and press it into place.

The peg is square, so be careful to align the cap’s square hole with the peg.

Using the Fingerprint Sensor

Fingerprint recognition is a feature that enrolls your fingerprint information into the computer and helps prevent unauthorized access by others. By enrolling the ID and password to the fingerprint authentication device, it is no longer necessary to input the password from the keyboard. Just by swiping the finger against the fingerprint sensor, the following functions will be enabled:

- Logon to Windows and access a security-enabled homepage through IE (Internet Explorer).
- Files and folders can be encrypted/decrypted and third party access to them prevented.
- Disable the password-protected screen-saver when returning from power-saving (standby) mode.
- System boot authentication and Single Touch Boot feature.
- Authentication of the User Password and Hard Disk Drive Password when booting up the computer.

To “swipe” refers to the action of reading a fingerprint using the fingerprint sensor.
Points to note about the Fingerprint Sensor

Due to the use of advanced technology to manufacture the fingerprint sensor, please abide by the following guidelines when using it. Please take extra care when handling the sensor surface. Failure to follow these guidelines might result in (1) damage to the sensor or cause sensor failure, (2) finger recognition problems, or lower finger recognition success rate.

- Do not scratch or poke the sensor with your nails or any hard or sharp objects.
- Do not press the sensor strongly.
- Do not touch the sensor with a wet finger or any wet objects. Keep sensor surface dry and free of water vapor.
- Do not touch the sensor with a soiled finger. Minute foreign particles on a soiled or dirty finger may scratch the sensor.
- Do not paste stickers or write on the sensor.
- Do not touch the sensor with a finger or any object with built-up static electricity.

Observe the following before you place your finger on the sensor whether for fingerprint enrollment/registration or recognition.

- Wash and dry your hands thoroughly.
- Remove static electricity from your fingers by touching any metal surface. Static electricity is a common cause of sensor failures, especially when the weather is dry.
- Clean the sensor with a lint-free cloth. Do not use detergent to clean the sensor.

Avoid the following finger conditions for enrollment or recognition as they may result in fingerprint enrollment errors or a drop in the fingerprint recognition success rate.

- Soaked or swollen finger (e.g. after taking bath)
- Injured finger
- Wet finger
- Soiled or oily finger
- Extremely dry skin condition on finger
Observe the following to improve the fingerprint recognition success rate.

- Enroll two or more fingers.
- Enroll additional fingers if recognition failure occurs often using enrolled fingers.
- Check your finger condition. Changed conditions, such as injured, rough, extremely dry, wet, soiled, dirty, oily, soaked, swollen fingers, may lower the recognition success rate. Also if the fingerprint is worn down or the finger becomes thinner or fatter, the recognition success rate may be lowered.
- The fingerprint for each finger is different and unique. Please ensure that only the registered or enrolled fingerprint or fingerprints are used for identification.
- Please be careful of the way the finger is placed.
- Please place the finger parallel to the sensor.
- Please align the finger in the center of the sensor.
- Please place the finger so that the first joint is within the sensor area.
- When swiping, please do it slowly and at a constant speed. If this does not improve the authentication rate, please adjust the speed.

Fingerprint Sensor Limitations.

- The fingerprint authentication uses the same Windows logon ID and password. If the Windows logon password has not been setup, please do so before registration.
- The fingerprint sensor compares and analyzes the unique characteristics in a fingerprint.
- A warning message will be displayed when recognition is abnormal or recognition is not successful within a fixed duration.
- The recognition success rate may differ from user to user.
- Toshiba does not guarantee that this fingerprint recognition technology will be error-free.
- Toshiba does not guarantee that the fingerprint sensor will recognize the enrolled user or accurately screen out unauthorized users at all times. Toshiba is not liable for any failure or damage that might arise out of the use of this fingerprint recognition software or utility.

The following illustrations show the correct way to slide your finger over the recognition sensor.
Align the finger and sensor as shown on the above figure.

File/Folder Size Limitations.

- When encrypting a file or folder using the Fingerprint recognition utility's file encryption function, note that encryption is not possible if the total file/folder size exceeds 2 GB or if the size of the encrypted file will exceed 2GB.

- When attempting to encrypt a file or folder as mentioned above, the message "Error: File Access Error" will be displayed and the encryption process will be interrupted.

- To check the file size or the total size of all the files in the folder, select Properties from the file or folder's menu in Explorer.

Points to note about the Fingerprint Utility

The user should back up the user profile information when using the functions provided in this software to encrypt files or folders. If this software or the user information is deleted without backing up the user profile information, the encrypted files will no longer be accessible. In addition, if the backup data is not used, the user will not be identified as the same user even if the same name is used again in user enrolment.

Please refer to the following procedures to back up.

Double-click on the OmniPass icon in the task tray, select the UserManagement tab, select Import/Export User, click on Export an OmniPass user profile, carry out fingerprint authentication, specify the destination folder and filename to save the profile, and save the file.

If Windows XP Professional’s file encryption function EFS (Encryption File System) is used to encrypt a file, the file cannot be further encrypted using the encryption function of this software.

If the fingerprint sensor and Trusted Platform Module (TPM) security are used as identification devices, install and configure the Infineon TPM Professional package first before configuring the fingerprint utility. Please refer to the TPM (Trusted Platform Module) Installation Guide for the installation and configuration methods for TPM.

In the help file, it is stated that this software’s Password Replacement function can be used for the Internet and general applications. However, the Internet Password Replacement function in the fingerprint utility provided in this computer can only be used with IE (Internet Explorer).
There is a section on **Strong Logon Security** in the help file, but the function is not available in the fingerprint utility provided in this computer. The sound during **Log Off Current User** (when logging off from OmniPass) cannot be set to off even if the **No Audio Prompts** configuration is set in **Audio Settings**. If you wish to turn it off, remove the settings for wav files in the event settings of the sound events section of the Sound and Audio Device Property in the control panel.

**Set Up Procedure**

Please use the following procedure when first using fingerprint authentication.

**Fingerprint Registration**

Enroll the required authentication data using the “OmniPass Enrollment Wizard”.

> The fingerprint authentication uses the same Windows logon ID and password. If the Windows logon password has not been set up, please do so before registration.

1. Click **start**, Point to **All Programs**, point to **Softex** and click **OmniPass Enrollment Wizard**.
2. Click **Enroll**.
3. The **Verify Username and Password** screen is displayed. Ensure the same Windows logon username and domain (*) are displayed before entering a password into the **Password** field. Click **Next**.
   
   (*) If the Windows logon account is for use within a LAN domain, enter the domain name, otherwise, if you are unsure, please check with the network administrator. If the logon is not used within a LAN domain, you should just enter the computer name.
4. The **Choose Finger** screen is displayed. Based on the illustration, select the finger to be recognized, and then click **Next**. Previously enrolled fingerprints would have green check marks. The fingerprint being enrolled now would have a red check mark. If any of the previously enrolled fingerprints is selected again, the latest information will be enrolled and previous information over-written.

   We recommend first-timers to click **Practice**, and then swipe the finger as a practice.
5. The **Capture Fingerprint** screen is displayed. Follow the onscreen instructions and use the same finger you have selected under **Choose Finger** to swipe three times to allow the sensor to read the fingerprint. The fingerprint will be shown in green if properly read, or in red if the reading is abnormal.
6. The **Verify Fingerprint** screen is displayed. Swipe the finger again to allow the sensor to read again. When the **Verification Successful** message is displayed, click **Next**.
In case of finger injury or authentication failure, it is recommended that another fingerprint also be enrolled. The following message will be displayed:
"It is recommended that you enroll at least two fingers. Would you like to enroll an additional finger now?"
Click **Yes** and repeat steps 3, 4 and 5 with another finger.

7. The **Audio and Taskbar Settings** screen is displayed. Click **Next**.
The **Congratulations** screen is displayed. Click **Done**.

8. Click **Yes** when the following message appears:
"OmniPass has successfully created the new user. Would you like OmniPass to log on the new user? Once logged on, passwords can be remembered for the new user."
This completes the fingerprint registration process.

**Windows Logon via Fingerprint Authentication**

In place of the usual Windows logon by ID and password, fingerprint authentication also allows logon to Windows.
This is useful especially when many users are using the PCs, as user selection can be skipped.

**Fingerprint Authentication Procedure**

1. Start up the computer.
2. The **Logon Authorization** screen is displayed. Choose any of the enrolled fingers and swipe the fingerprint on the sensor.
   If authentication is successful, the user will be logged on to Windows.

   *If the fingerprint authentication fails, please logon using the Windows logon password.*

   Please logon using the Windows logon password if the fingerprint authentication failed for three consecutive tries. To logon using the Windows logon password, enter the Windows logon password at the “Welcome” screen as normal.

   A warning message will be displayed when authentication is abnormal or authentication is not successful within a fixed duration.
Fingerprint System Boot Authentication

The fingerprint authentication system can be used to replace the keyboard-based User Password authentication system when booting.

If you do not want to use the fingerprint authentication system for password authentication when booting, and prefer to use the keyboard-based system instead, press the BkSP (backspace) key when the Fingerprint System Boot Authentication screen is displayed. This will switch the password input screen to the keyboard-based one.

How to enable Fingerprint System Boot Authentication

It is necessary to register your fingerprint with the OmniPass application in order to configure Fingerprint System Boot Authentication. Check that the fingerprint is registered before configuring the settings.

1. Click on the System Settings tab in the OmniPass Control Center.
2. Click on PBA Settings.
3. Click on Enroll PBA Authentication Device.
4. Check the Enable System Boot Authentication checkbox.
5. Click on the Next button and after the Congratulations message is displayed on the screen, click on the Done button to end the PBA Settings.

The modified configuration for Fingerprint System Boot Authentication becomes effective the next time the system is booted up.
It is necessary to register the User Password before using the Fingerprint System Boot Authentication and its extended function, the Fingerprint Single Touch Boot Feature. Please use TOSHIBA Password Utility to register the User Password.

The Single Touch Boot Feature cannot function if Windows’s secure logon function (requiring users to press Ctrl + Alt + Del) is set to ON. To use this feature, please disable the secure logon function. Note, however, that disabling the secure logon function might lead to security problems.

When Fingerprint System Boot Authentication is configured, a new 24 MB hard disk partition is created to store the configuration information for administration purposes. Please do not delete this partition. If the partition is deleted, Fingerprint System Boot Authentication will not function anymore and the User/BIOS Password as well as any sub-passwords, if elected, including the Hard Disk Drive and Supervisor Passwords will have to be re-entered via the keyboard.

If this hard disk partition is deleted by mistake, check that the hard disk drive has at least 24 MB of empty space, set the Enable System Boot Authentication checkbox from PBA Settings in the OmniPass Control Center to off, end this utility, restart the system and set this checkbox to on again. Refer to How to Enable Fingerprint System Boot Authentication Settings. This will restore the hard disk partition storing the configuration information and allow Fingerprint System Boot Authentication to function again.

For systems that used the Fingerprint System Boot Authentication function before but had their OS reinstalled, please reregister the User Password after first releasing the User Password in the system. Failure to do so will result in Fingerprint System Boot Authentication not functioning properly.

When swiping, please do it slowly and at a constant speed. If this does not improve the authentication rate, please adjust the speed.

This function can only be used when booting up the OS from the built-in hard disk drive.

---

**How to Enable Fingerprint System Boot Authentication Settings**

It is necessary to first enroll your fingerprint with the OmniPass application prior to enabling and configuring the Fingerprint System Boot Authentication System. Check that your fingerprint is enrolled before configuring the settings. See Manual for Fingerprint Registration/Enrollment instructions.

1. Click on the **System Settings** tab in the OmniPass Control Center.
2. Click on **PBA Settings**.
3. Click on **Enroll PBA Authentication Device**.
4. Check the **Enable System Boot Authentication** checkbox.
5. Click on the **Next** button and after the **Congratulations** message is displayed on the screen, click on the **Done** button to end the PBA Settings.

The modified configuration for Fingerprint System Boot Authentication becomes effective the next time the system is booted up.

**Fingerprint Single Touch Boot Feature**

**General**

This is a feature that allows the user to complete the authentication for both the User/BIOS Password (and optionally, the Hard Disk Drive and Supervisor sub-passwords) and logging on to Windows using only one fingerprint authentication when booting up. It is necessary to register the User/BIOS Password and Windows Logon password before using the Fingerprint System Boot Authentication and this Fingerprint Single Touch Boot Feature. Please use TOSHIBA Password Utility to register your User/BIOS Password. If Windows Logon is not the default for your system, see Manual to register your Windows Logon password.

Only one fingerprint authentication is required to replace the User/BIOS Password (and, if selected, the Hard Disk Drive and Supervisor sub-passwords) and Windows Logon password.

**How to Enable Fingerprint Single Touch Boot Feature**

It is necessary to first enroll your fingerprint with the OmniPass application prior to enabling and configuring the How to Enable Fingerprint Single Touch Boot Feature. Check that the fingerprint is enrolled before configuring the settings. See Manual for Fingerprint Registration/Enrollment instructions.

1. Click on the **System Settings** tab in the **OmniPass Control Center**.
2. Click on **PBA Settings**.
3. Click on **Enroll PBA Authentication Device**.
4. Check the **Enable Single Touch Boot Feature** checkbox.
5. Click on the **Next** button and after the **Congratulations** message is displayed on the screen, click on the **Done** button to end the PBA Settings.

The modified configuration for the Fingerprint Single Touch Boot Feature becomes effective the next time the system is booted up.

**Fingerprint utility limitations**

TOSHIBA does not guarantee that the Fingerprint utility technology will be completely secure or error-free. TOSHIBA does not guarantee that the Fingerprint utility will accurately screen out unauthorized users at all times. TOSHIBA is not liable for any failure or damage that might arise out of the use of the fingerprint software or utility.
How to Swipe the Finger

Using the following steps when swiping fingers for fingerprint registration or authentication will help to minimize authentication failures:

1. Align the first joint of the finger to the center of the sensor. Lightly touch the sensor and swipe finger levelly towards you. While lightly touching the sensor, swipe the finger towards you until the sensor surface becomes visible. Ensure the center of the fingerprint is on the sensor when swiping the finger.

- **Avoid swiping with the finger stiff or pressed-on too hard**
  Fingerprint reading may fail if the center of the fingerprint is not touching on the sensor, or when finger is swiped while pressing hard. Make sure that the center of the fingerprint is touching the sensor before swiping.

- **Confirm the center of the fingerprint swirl before swiping**
  The thumb’s fingerprint has a bigger swirl, which is prone to misalignment and distortions. This will cause difficulty in registration and a drop in the authentication success rate. Always confirm the center of the fingerprint swirl so that it is swiped along the centerline of the sensor.

- **When fingerprint reading is not successful**
  There is a possibility of authentication failures if the finger is swiped too quickly or too slowly. Follow the onscreen instructions to adjust the speed of the swipe.
Using the USB floppy disk drive (optional)

The optional USB floppy disk drive accommodates 1.44-megabyte or 720-kilobyte floppy disks and connects to the USB port. Refer to Chapter 2, *The Grand Tour*, for more information.

**Connecting the USB floppy disk drive**

To connect the drive, plug the floppy disk drive’s USB connector into one of the computer’s USB ports.

> Make sure the connector is back side up and properly aligned with the socket. Do not try to force the connection, doing so can damage the connecting pins.

If you connect the USB floppy disk drive after turning on the computer, it will take about 10 seconds for the computer to recognize the drive. Do not disconnect and reconnect before 10 seconds has elapsed.

**Disconnecting USB floppy disk drive**

When you have finished using the USB floppy disk drive, follow the procedures below to disconnect it:

1. Wait for the indicator light to go out to make sure all floppy disk activity has stopped.

   If you disconnect the USB floppy disk drive or turn off the power while the computer is accessing the drive you may lose data or damage the floppy disk or the drive.

2. Click the **Safely Remove Hardware** icon on the Task Bar.
3. Click **USB floppy disk drive** device that you want remove.
4. Pull the floppy disk drive’s USB connector out of the computer’s USB port.
Changing Ultra Slim Bay modules

This section explains how to change modules in the Ultra Slim Bay. The illustrations show replacement of the optical media drive with the Ultra Slim Bay HDD adaptor. Therefore, the text refers to those modules. However, the procedures are the same for any of the modules: DVD-ROM&CD-R/RW drive, DVD Super Multi drive and HDD adaptor.

To avoid injury, do not put your hand into the Ultra Slim Bay slot.

The TOSHIBA Mobile Extension is preinstalled to support hot swapping under Windows. Refer to Chapter 1, Introduction, for information on using this utility to change modules while the computer’s power is on.

Removing a module

Remove the optical media drive as described below.

1. You can confirm that the disks are not operating with indicators. If all indicators are off, it means that no disks are operating currently.
2. Turn the computer upside down.
3. Remove the screw near the icon securing the Ultra Slim Bay.
4. Make sure the screw in the Ultra Slim Bay lock screw is set in the hole for the unlock position.
5. Slide the Ultra Slim Bay latch to the unlock position.
6. Grasp the optical media drive and slide it out.

Wait for all disk indicators to go out before you turn over the computer and do not lay the computer down gently. Shock can damage the HDD or other components.

The optical media drive and other Ultra Slim Bay modules can become hot with use. Be careful when removing the module.
Inserting a module

Insert the Ultra Slim Bay HDD adaptor as described below.

1. Insert the Ultra Slim Bay HDD adaptor in the computer as shown below and press until the ejector clicks.

2. If you want to lock the Ultra Slim Bay HDD adaptor, set the Ultra Slim Bay lock screw in the hole for the lock position (➁). The lock screw is inserted in the unlock position (➀) at the time of purchasing.
Using optical media drives

The full-size drive provides high-performance execution of CD/DVD-ROM-based programs. You can run either 12 cm (4.72”) or 8 cm (3.15”) CD/DVDs without an adaptor. An ATAPI interface controller is used for CD/DVD-ROM operation. When the computer is accessing a CD/DVD-ROM, an indicator on the drive glows and the Ultra Slim Bay indicator glows.

Use the WinDVD application to view DVD-Video discs.

If you have a DVD-ROM&CD-R/RW drive, refer also to the Writing CDs on DVD-ROM&CD-R/RW drive section for precautions on writing to CDs.

If you have a DVD Super Multi drive, refer also to the Writing CD/DVDs on DVD Super Multi drive section for precautions on writing to CDs/DVDs.

When the power of the optical media drive is off, pressing the Fn + Tab keys will turn the power of the optical media drive on. Furthermore, it is possible to set it to turn the power of the optical media drive on and eject the tray at the same time.

Loading discs

To load CD/DVDs, follow the steps below.

1. When the computer’s power is on, press the eject button to open the disc tray slightly.

2. Grasp the disc tray gently and pull until it is fully opened.
3. Lay the CD/DVD, label side up, in the disc tray.

4. Press gently at the center of the CD/DVD until you feel it click into place. The CD/DVD should lie below the top of the spindle, flush with the spindle base.

When the disc tray is fully opened, the edge of the computer will extend slightly over the CD/DVD tray. Therefore, you will need to turn the CD/DVD at an angle when you place it in the disc tray. After seating the CD/DVD, however, make sure it lies flat.

- Do not touch a laser lens and its circumference portion. Doing so could cause misalignment.
- Prevent foreign objects from entering the drive. Check the surface of the disc tray, especially the area behind the front edge of the disc tray, to make sure there are no such objects before closing the drive.
5. Push the center of the disc tray to close it. Press gently until it locks into place.

If the CD/DVD is not seated properly when the disc tray is closed, the CD/DVD might be damaged. Also, the disc tray might not open fully when you press the eject button.

Closing the CD/DVD disc tray
Removing discs

To remove the CD/DVD, follow the steps below.

Do not press the eject button while the computer is accessing the media drive. Wait for the Ultra Slim Bay indicator to go out before you open the disc tray. Also, if the CD/DVD is spinning when you open the disc tray, wait for it to stop before you remove it.

1. To pop the disc tray partially open, press the eject button. Gently pull the disc tray out until it is fully opened.

2. The CD/DVD extends slightly over the sides of the disc tray so you can hold it. Hold the CD/DVD gently and lift it out.

3. Push the center of the disc tray to close it. Press gently until it locks into place.
How to remove CD/DVD when the disc tray will not open

Pressing the eject button will not open the disc tray when the computer power is off. If the power is off, you can open the disc tray by inserting a slender object (about 15 mm) such as a straightened paper clip into the eject hole just to the right of the eject button.

Manual release with the eject hole

Turn off the power before you use the eject hole. If the CD/DVD is spinning when you open the disc tray, the CD/DVD could fly off the spindle and cause injury.

Writing CDs on DVD-ROM&CD-R/RW drive

Depending on the type of drive installed, you may be able to write CDs. The DVD-ROM&CD-R/RW drive lets you write as well as read CD-ROMs. Observe the precautions in this section to ensure the best performance for writing CDs. For information on loading and unloading CDs refer to the Using optical media drives section.

- Refer to theWritable discs section in Chapter 2 for details about the types of writable CD/DVD discs.
- Do not turn off the power of the optical media drive while the computer is accessing the drive. If you turn off the power, you may lose data.
- When the power of the optical media drive is off, the disc tray will not open even if the eject button is pushed. Use the optical media drive power icon to turn the power of the optical media drive on.

When writing to media using an optical drive, always connect the AC adaptor to a power plug socket. If data is written while powered by the batteries, writing may sometimes fail due to low battery power and data loss may occur.
Before writing or rewriting

Please observe the following points when you write or rewrite the data.

■ We recommend the following manufacturers of CD-R and CD-RW media. Media quality can affect write or rewrite success rates.

**CD-R:**
- TAIYO YUDEN CO., LTD.
- MITSUBISHI CHEMICAL CORPORATION
- RICOH Co., Ltd.

**Multi-Speed and High-Speed CD-RW:**
- MITSUBISHI CHEMICAL CORPORATION
- RICOH Co., Ltd.

**Ultra-Speed CD-RW:**
- MITSUBISHI CHEMICAL CORPORATION

TOSHIBA has confirmed the operation of CD-R and CD-RW media of the manufacturers above. Operation of other media cannot be guaranteed.

■ The actual number of rewrites to CD-RW is affected by the quality of the disc and the way it is used.

■ Be sure to connect the AC adaptor when you write or rewrite.

■ Be sure to close all other software programs except the writing software.

■ Do not run software such as a screen saver which can put a heavy load on the CPU.

■ Operate the computer at full power. Do not use power-saving features.

■ Do not write while virus check software is running. Wait for it to finish, then disable virus detection programs including any software that checks files automatically in the background.

■ Do not use hard disk utilities, including those intended to enhance hard disk drive access speeds. They may cause unstable operation and damage data.

■ Write from the computer’s hard disk drive to the CD. Do not try to write from shared devices such as a LAN server or any other network device.

■ Writing with software other than Sonic RecordNow! has not been confirmed. Therefore, operation with other software cannot be guaranteed.
When writing or rewriting

Note the following when you write or rewrite a CD-R or CD-RW.

- Always copy data from the hard disk drive to the optical media. Do not use cut-and-paste as the original data will be lost if there is a write error.
- Do not perform any of the following actions:
  - Change users in the Windows XP operating system.
  - Operate the computer for any other function, including use of a mouse or Touch Pad, closing/opening the LCD panel.
  - Start a communication application such as a modem.
  - Apply impact or vibration to the computer.
  - Install, remove or connect external devices, including the following: PC card, SD card, ExpressCard, USB devices, external monitor, i.LINK devices, optical digital devices.
  - Open the optical media drive.
  - Remove the optical media drive from the Ultra Slim Bay.
- If the media is poor in quality, dirty or damaged, writing or rewriting errors may occur.
- Set the computer on a level surface and avoid places subject to vibration such as airplanes, trains or cars. Do not use an unstable surface such as a stand.
- Keep mobile phones and other wireless communication devices away from the computer.

Writing CD/DVDs on DVD Super Multi drive

You can use the DVD Super Multi drive to write data to either CD-R/RW or DVD-R/-RW/+R/+RW/-RAM discs. The following applications for writing are provided: RecordNow!, and DLA licensed by Sonic Solutions, and InterVideo’s WinDVD Creator Platinum.

- Refer to the Writable discs section in Chapter 2 for details about the types of writable CD/DVD discs.
- Do not turn off the power of the optical media drive while the computer is accessing the drive. If you turn off the power, you may lose data.
- When the power of the optical media drive is off, the disc tray will not open even if the eject button is pushed. Use the optical media drive power icon to turn the power of the optical media drive on.

When writing to media using an optical drive, always connect the AC adaptor to a power plug socket. If data is written while powered by the batteries, writing may sometimes fail due to low battery power and data loss may occur.
**Important message**

Before you write or rewrite to CD-R/RW or DVD-R/-RW/+R/+RW/-RAM discs, read and follow all setup and operating instructions in this section. If you fail to do so, the DVD Super Multi drive may not function properly, and you may fail to write or rewrite, lose data or incur other damage.

**Disclaimer**

TOSHIBA does not bear responsibility for the following:

- Damage to any CD-R/RW or DVD-R/-RW/+R/+RW/-RAM disc that may be caused by writing or rewriting with this product.

- Any change or loss of the recorded contents of CD-R/RW or DVD-R/-RW/+R/+RW/-RAM disc that may be caused by writing or rewriting with this product, or for any business profit loss or business interruption that may be caused by the change or loss of the recorded contents.

- Damage that may be caused by using third party equipment or software.

Given the technological limitations of current optical disc writing drives, you may experience unexpected writing or rewriting errors due to disc quality or problems with hardware devices. Also, it is a good idea to make two or more copies of important data, in case of undesired change or loss of the recorded contents.

**Before writing or rewriting**

- Based on TOSHIBA's limited compatibility testing, we suggest the following manufacturers of CD-R/RW and DVD-R/+R/-RW/+RW/-RAM disc. However, in no event does TOSHIBA guarantee the operation, quality or performance of any disc. Disc quality can affect write or rewrite success rates.

</tbody>
</table>
If the disc is poor in quality, dirty or damaged, writing or rewriting errors may occur. Be careful to check the disc for dirt or damage before you use it.

The actual number of rewrites to CD-RW, DVD-RW, DVD+RW or DVD-RAM is affected by the quality of the disc and the way it is used.

There are two types of DVD-R discs: authoring and general use discs. Do not use authoring discs. Only general use discs can be written to by a computer drive.

You can use DVD-RAM discs that can be removed from a cartridge and DVD-RAM discs designed without a cartridge.

Other DVD-ROM drives for computers or other DVD players may not be able to read DVD-R/-RW or DVD+R/+RW discs.

Data written to a CD-R/DVD-R/DVD+R disc cannot be deleted either in whole or in part.

Data deleted (erased) from a CD-RW, DVD-RW, DVD+RW and DVD-RAM disc cannot be recovered. Check the content of the disc carefully before you delete it. If multiple drives that can write data to discs are connected, be careful not to delete data from the wrong drive.

In writing to a DVD-R/-RW, DVD+R/+RW or DVD-RAM disc, some disc space is required for file management, so you may not be able to write the full capacity of the disc.
Since the disc is based on the DVD standard, it might be filled with dummy data if the written data is less than about 1 GB. Even if you write only a small amount of data, it might take time to fill in the dummy data.

DVD-RAM formatted by FAT32 cannot be read in Windows 2000 without DVD-RAM Driver Software.

When multiple drives that can write data to discs are connected, be careful not to write to the wrong drive.

Be sure to connect the AC adaptor before you write or rewrite.

Before you enter standby/Hibernation Mode, be sure to finish DVD-RAM writing. Writing is finished if you can eject DVD-RAM media.

Be sure to close all other software programs except the writing software.

Do not run software such as a screen saver, which can put a heavy load on the CPU.

Operate the computer in the full-power mode. Do not use power-saving features.

Do not write while virus check software is running. Wait for it to finish and then disable virus detection programs including any software that checks files automatically in the background.

Do not use hard disk utilities, including those intended to enhance hard disk drive access speed. They may cause unstable operation and data damage.

CD-RW (Ultra Speed +) media is not available. If used, data may be lost or damaged.

Write from the computer’s hard disk drive to the CD/DVD. Do not try to write from shared devices such as a LAN server or any other network device.

Writing with software other than RecordNow! and InterVideo WinDVD Creator Platinum are not recommended.

**When writing or rewriting**

Please observe/consider the following when you write or rewrite to a CD-R/RW, DVD-R/-RW/-RAM or DVD+R/+RW disc.

Do not perform any of the following actions when writing or rewriting:
- Change users in the Windows XP operating system.
- Operate the computer for any other function, including using a mouse or Touch Pad or closing/opening the LCD panel.
- Start a communication application such as a modem.
- Apply impact or vibration to the computer.
- Install, remove or connect external devices, including the following: PC card, SD card, ExpressCard, USB devices, external monitor, i.LINK devices, optical digital devices.
- Use the Audio/Video control button to reproduce music or voice.
- Open the optical media drive.
- Remove the optical media drive from the Ultra Slim Bay.
Do not use shut down/log off and standby/hibernation while writing or rewriting.

Make sure writing or rewriting is completed before going into standby/hibernation. Writing is completed if you can open the DVD-ROM&CD-R/RW or DVD Super Multi drive tray.

Set the computer on a level surface and avoid places subject to vibration such as airplanes, trains, or cars. Do not use an unstable surface such as a stand.

Keep mobile phones and other wireless communication devices away from the computer.

Always copy data from the hard disk drive to the optical media. Do not use cut-and-paste. The original data will be lost if there is a write error.

**RecordNow! Basic for TOSHIBA**

Note the following limitations when you use RecordNow!:

- DVD-Video cannot be created using RecordNow!.
- DVD-Audio cannot be created using RecordNow!.
- You cannot use RecordNow!'s “Audio CD for Car or Home CD Player” function to record music to the DVD-R/-RW or DVD+R/+RW discs.
- Do not use the “Exact Copy” function of RecordNow! to copy DVD-Video and DVD-ROM with copyright protection.
- DVD-RAM disc cannot be backed up with the “Exact Copy” function of RecordNow!.
- You cannot back up a CD-ROM or CD-R/RW to DVD-R/-RW or DVD+R/+RW using the “Exact Copy” function of RecordNow!.
- You cannot back up DVD-ROM, DVD-Video, DVD-R/-RW or DVD+R/+RW to CD-R/RW using the “Exact Copy” function of RecordNow!.
- RecordNow! cannot record in packet format.
- You might not be able to use the “Exact Copy” function of RecordNow! to back up a DVD-R/-RW or DVD+R/+RW disc that was made with other software on a different DVD-R/-RW or DVD+R/+RW recorder.
- If you add data to a DVD-R and DVD+R disc that you have already recorded to, you might not be able to read the added data under some circumstances. It cannot be read in 16-bit operating systems, such as Windows 98SE and Windows Me. In Windows NT4, you will need Service Pack 6 or later to read added data. In Windows 2000, you will need Service Pack 2 or later to read it. Some DVD-ROM and DVD-ROM&CD-R/RW drives cannot read added data regardless of the operating system.
- RecordNow! does not support recording to DVD-RAM discs. To record to a DVD-RAM, use Explorer or another utility.
- When you back up a DVD disc, be sure the source drive supports recording to DVD-R/-RW or DVD+R/+RW discs. If the source drive does not support recording to DVD-R/-RW or DVD+R/+RW discs, it might not be backed up correctly.
When you back up a DVD-R, DVD-RW, DVD+R or DVD+RW, be sure to use the same type of disc.

You cannot partially delete any data written to a CD-RW, DVD-RW or DVD+RW disc.

**Data Verification**

To verify that data is written or rewritten correctly, follow the steps below before you write or rewrite a Data CD/DVD.

1. Click the **Options** button ( ) on the RecordNow! Console to open the Options panels.
2. Select the Data in the left-side menu.
3. Mark the **Verify data written to the disc after burning** check box in the Data Options.
   
   Click the **OK** button.

**DLA for TOSHIBA**

Note the following limitations when you use DLA:

- This software supports only rewritable discs (DVD+RW, DVD-RW, and CD-RW). It does not support DVD+R, DVD-R, and CD-R discs that are not rewritable.

- DLA does not support formatting and writing to a DVD-RAM disc - these functions are performed by DVD-RAM Driver Software. Even if the DLA Format menu appears when inserting a DVD-RAM disc and right-clicking the drive icon in Windows Explorer, you should use the “DVDForm” command to format this disc. You can run “DVDForm” by clicking the Start button on the taskbar to display the Start menu and then selecting “All Programs”, “DVD-ROM”, “DVD-ROM Driver” and “DVDForm” sequentially.

- Do not use any discs that have been formatted with packet writing software other than DLA. Similarly, do not use any discs that have been formatted with DLA with any packet writing software other than DLA. When using a disc you are not familiar with, format it by selecting “Full Format” before using it.

- Do not use the cut-and-paste function for files and folders. A file or folder that has been cut may be lost if writing fails due to an error on the disc.

- When writing any setup files for an application to a disc formatted by DLA, and attempting to start Setup from this disc, an error may occur. In this case, please copy the files to your hard disk and then run Setup from there.
When using WinDVD Creator Platinum

You can record video back to your digital camcorder via i.LINK (IEEE1394) using WinDVD Creator Platinum. However, there is a case where its playback sound appears choppy - in this instance please follow the instructions below:

1. Click start and select the Control Panel.
2. Click the Performance and Maintenance icon in the Control Panel.
3. Click the System icon in the Performance and Maintenance window.
4. Click the Advanced tab in the System Properties window.
5. Click the Settings icon in the “Performance” section.
6. Click the Advanced tab in the Performance Options window.
7. Click the Change icon in the “virtual memory” section.
8. Select the Custom size button in the Virtual Memory window.
9. Specify much higher values for “Initial size” and “Maximum size.”
10. Click the Set button in the Virtual Memory window.
11. Click the OK button in the Virtual Memory window.

How to make a DVD-Video

Simplified steps for making a DVD-Video from video data captured from a DV-Camcorder:

1. Click [Start]-[All Programs] - [InterVideo WinDVD Creator2] - [InterVideo WinDVD Creator] to launch WinDVD Creator.
2. Click [Capture] button then capture the video data from the DV-Camcorder via IEEE1394.
3. Click [Edit] button then drag the video clips from [Video Library] tab to the edit track.
4. Click [Make Movie] button in the top bar.
5. Double Click the Right arrow button icon in the center of right side.
6. Put a blank DVD-R/+R disc or an erased DVD-RW/+RW disc in the drive.
7. Click [Start] to record to the disc.
8. When recording is finished, the tray opens.

How to learn more about InterVideo WinDVD Creator

Please refer to the on-line Help for additional InterVideo WinDVD Creator information.
Important information for use

Note the following limitations when you write to a video DVD:

1. Editing digital video
   - Log in with Administrator rights to use WinDVD Creator.
   - Make sure that your computer is running on AC power when using WinDVD Creator.
   - Operate the computer at Full Power. Do not use power-saving features.
   - While you are editing a DVD-Video, you can display previews. However, if another application is running, the preview might not display properly.
   - WinDVD Creator cannot show video on the external monitor when in simultaneous mode.
   - WinDVD Creator cannot edit or play copy protected content.
   - Do not change display settings while using WinDVD Creator.
   - Do not enter standby/Hibernation Mode while using WinDVD Creator.
   - Do not operate WinDVD Creator immediately after turning on the computer. Please wait until all disk/disc drive activity has stopped.
   - When recording to a DV-Camcorder, to ensure you capture all of your data, let the camcorder record for a few seconds before you begin recording your actual data.
   - CD recorder, JPEG functions, DVD-Audio, mini DVD and Video CD functions are not supported in this version.
   - While recording video to DVD or tape, please close all other programs.
   - Do not run software like a screen saver because it can put a heavy load on the CPU.
   - Do not run communication applications like a modem or a LAN.
2. Before recording the video to DVD
   ■ When you record to DVD discs, please use only media recommended by TOSHIBA.
   ■ Do not set the working drive to a slow device like a USB 1.1 hard disk drive or it will fail to write the DVD.
   ■ Do not perform any of the following actions:
     ■ Operate the computer for any other function, including using a mouse or Touch Pad or closing/opening the LCD panel.
     ■ Bump or cause vibration to the computer.
     ■ Use the Mode control button and Audio/Video control button to reproduce music or voice.
     ■ Open the optical media drive.
     ■ Install, remove or connect external devices, including the following: PC card, SD card, ExpressCard, USB devices, external monitor, i.LINK devices, optical digital devices.
   ■ Please verify your disc after recording important data.
   ■ DVD-R/+R/-RW discs cannot be written in VR format.
   ■ WinDVD Creator cannot export to DVD-Audio, VideoCD or miniDVD format.
   ■ WinDVD Creator can write DVD-RAM/+RW in VR format, but the disc may only play on your computer.
   ■ When writing to a DVD disc, WinDVD Creator requires 2GB or more of disk space for every one hour of video.
   ■ When you make a fully recorded DVD, the chapter sequence may not play correctly.

3. About Disc Manager
   ■ WinDVD Creator can edit one play list on a disc.
   ■ WinDVD Creator might show a different thumbnail than you previously set in CE (Consumer Electronics) DVD-RAM recorder.
   ■ Using the Disc Manager, you can edit DVD-VR format on DVD-RAM, DVD+VR format on DVD+RW, and DVD-Video format on DVD-RW.

4. About recorded DVDs
   ■ Some DVD-ROM drives for personal computers or other DVD players may not be able to read DVD-R/+R/-RW/+RW/-RAM discs.
   ■ When playing your recorded disc on your computer, please use the WinDVD software application.
   ■ If you use an over-used rewritable disc, the full formatting might be locked. Please use a brand new disc.
Media care

This section provides tips on protecting data stored on your CD/DVDs and floppy disks.

Handle your media with care. The following simple precautions will increase the lifetime of your media and protect the data stored on them:

**CD/DVDs**

1. Store your CD/DVDs in the container they came in to protect them and keep them clean.
2. Do not bend the CD/DVD.
3. Do not write on, apply a sticker to, or otherwise mar the surface of the CD/DVD that contains data.
4. Hold the CD/DVD by its outside edge or the edge on the center hole. Fingerprints on the surface can prevent the drive from properly reading data.
5. Do not expose to direct sunlight, extreme heat or cold. Do not place heavy objects on your CD/DVDs.
6. If your CD/DVDs become dusty or dirty, wipe them with a clean dry cloth. Wipe from the center out, do not wipe in a circular direction around the CD/DVD. If necessary, use a cloth dampened in water or a neutral cleaner. Do not use benzine, thinner or similar cleaner.

**Floppy disks**

1. Store your floppy disks in the container they came in to protect them and keep them clean. If a floppy disk is dirty, do not use cleaning fluid. Clean it with a soft damp cloth.
2. Never open the shutter or touch the magnetic surface of your floppy disk. You could permanently damage it and lose data.
3. Always handle floppy disks with care, to prevent the loss of stored data. Always apply the floppy disk label in the correct location. Never apply a new label on top of an existing one. The label could come loose and damage the floppy drive.
4. Never use a pencil for writing on a floppy disk label. Pencil lead dust could cause a system malfunction. Always use a felt-tipped pen. When writing a title on a label, first write on the label, then apply the label to the floppy disk.
5. Never put a floppy disk in a location where water or other liquid may contact it or where it is excessively damp. It could cause data loss. Never use a wet or damp floppy disk. It could damage the floppy disk drive or other devices.
6. Data may be lost if the floppy disk is twisted; bent; or exposed to direct sunlight, extreme heat or cold.
7. Do not place heavy objects on your floppy disks.
8. Do not eat, smoke, or use erasers near your floppy disks. Foreign particles inside the floppy disk’s jacket can damage the magnetic surface.

9. Magnetic energy can destroy the data on your floppy disks. Keep your floppy disks away from speakers, radios, television sets and other sources of magnetic fields.

**Sound system**

This section describes audio controls including sound levels and power management.

**Volume Control**

The Volume Control utility lets you control the audio volume in Windows for both playback and recording.

- To launch Volume Control for playback, click **start**, point to **All Programs**, point to **Accessories**, point to **Entertainment** and click **Volume Control**.
- To launch Recording Control, click **Options**, point to **Properties**, choose **Recording** and click **OK**.
- To view details of the Volume Control, click **Help** on the Volume Control.

**Microphone level**

The change the microphone gain, follow the steps below.

1. Click **start**, point to **All Programs**, point to **Accessories**, point to **Entertainment** and click **Volume Control**.
2. Click **Options** and point to Properties.
3. Select **Recording** and click **OK**.
4. Click **Options** and select **Advanced Controls**.
5. Click **Advanced**.
6. Check the **Microphone Boost** checkbox.

**SigmaTel Control Panel**

SigmaTel Control Panel lets you control some of the audio settings. Follow the steps below to launch the SigmaTel Control Panel:

1. Click **start** and click **Control Panel**.
2. If you are viewing the Control Panel in Category View, click on **Switch to Classic View**.
3. Double-click the **SigmaTel Audio** icon.
**Volume control**

To adjust the audio volume in Windows for both playback and recording, click the Levels tab.

To hear the voice from a microphone or the analog sound from the line input, disable the **Mute** button in the **Input Monitor**, and then disable the Audio power management function described below.

**Audio power management**

The audio controller can be powered down when the audio function is not used. To disable audio power management, follow the steps below.

1. Clicked the **Advanced** tab.
2. Check the **Enable Power Management** check box.
3. Input a time in **Time to Power Saving State**.

If the **Enable Power Management** check box is not checked, the audio controller will always be in operation.

**Graphic equalizer**

Adjust the equalizer settings to enhance sound quality.

**TOSHIBA Mic Effect**

TOSHIBA Mic Effect is a utility used to enable comfortable calls with echo cancellation function. The echo cancellation function removes or reduces any harsh echoes or howling sounds that occur when playing audio sounds recorded with a microphone through the speakers. The echo cancellation function is available only when you use telephony software such as Windows Messenger with a voice conversation function.

For more instructions for this software, click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Utilities** and click **TOSHIBA Mic Effect Help**.

**Modem**

This section describes how to connect and disconnect the internal modem to and from a telephone jack.

- **Connection to any communication line other than an analog phone line could cause a PC system failure.**
- **Connect the built-in modem only to ordinary analog phone lines.**
- **Never connect the built-in modem to a digital line (ISDN).**
- **Never connect the built-in modem to the digital connector on a public telephone or to a digital private branch exchange (PBX).**
- **Never connect the built-in modem to a key telephone system for residences or offices.**
- **Never operate your PC on AC power during a thunderstorm. If you see lightning or hear thunder, immediately turn off the PC. An electric surge caused by the storm, may result in a system failure, loss of data or hardware damage.**
**Region selection**

Telecommunication regulations vary from one region to another, so you will need to make sure the internal modem’s settings are correct for the region in which it will be used.

The built-in modem can be used only in specified countries and regions. Using the modem in an area not specified for use may cause a system failure. Check the specified areas carefully before using it.

To select a region, follow the steps below.

1. Click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Networking** and click **Modem Region Select**.

2. The Region Selection icon will appear in the Windows Task Bar.

3. Click the icon with the primary mouse button to display a list of regions that the modem supports. A sub menu for telephony location information will also be displayed. A check will appear next to the currently selected region and telephony location.

4. Select a region from the region menu or a telephony location from the sub-menu.

   - When you click a region it becomes the modem’s region selection, and the New Location for telephony will be set automatically.
   - When you select a telephony location, the corresponding region is automatically selected and it becomes the modem’s current region setting.

**Properties menu**

Click the icon with the secondary mouse button to display properties menu on the screen.

**Setting**

You can enable or disable the following settings:

**AutoRun Mode**

The Region Select utility starts automatically when you start up the operating system.

Open the Dialing Properties dialog box after selecting region.

The dialing properties dialog box will be displayed automatically after you select the region.

Location list for region selection.

A submenu appears displaying location information for telephony.
Open dialog box, if the modem and Telephony Current Location region code do not match.

A warning dialog box is displayed if current settings for region code and telephony location are incorrect.

Modem Selection

If the computer cannot recognize the internal modem, a dialog box is displayed. Select the COM port for your modem to use.

Dialing Properties

Select this item to display the dialing properties.

If you are using the computer in Japan, the Telecommunications Business Law requires that you select Japan region mode. It is illegal to use the modem in Japan with any other selection.

Connecting

To connect the modular cable, follow the steps below.

The modular cable that comes with the computer must be used to connect the modem. Connect the end of the modular cable with the core to the computer.

- Connection to any communication line other than an analog phone line could cause a PC system failure.
  - Connect the built-in modem only to ordinary analog phone lines.
  - Never connect the built-in modem to a digital line (ISDN).
  - Never connect the built-in modem to the digital connector on a public telephone or to a digital private branch exchange (PBX).
  - Never connect the built-in modem to a key telephone system for residences or offices.

- Never operate your PC on AC power during a thunderstorm. If you see lightning or hear thunder, immediately turn off the PC. An electric surge caused by the storm, may result in a system failure, loss of data or hardware damage.
1. Plug one end of the modular cable into the computer’s modem jack.
2. Plug the other end of the modular cable into a telephone jack.

**Connecting the internal modem**

![Diagram showing modular cable connection](image)

*Do not pull on the cable or move the computer while the cable is connected.*

*If you use a storage device such as an optical drive or hard disk drive connected to a 16-bit PC card, you might experience the following modem problems:*

- Modem speed is slow or communication is interrupted.
- Skips may occur in sound.

**Disconnecting**

To disconnect the internal modular cable, follow the steps below.
1. Pinch the lever on the connector in the telephone jack and pull out the connector.
2. Disconnect the cable from the computer’s modem jack in the same manner.
Wireless communications

The computer's wireless communication function supports both Wireless LAN and Bluetooth devices.

All models are provided with Wireless Communication switch. Some models are equipped with both Wireless LAN and Bluetooth functions.

Wireless LAN

The Wireless LAN is compatible with other LAN systems based on Direct Sequence Spread Spectrum /Orthogonal Frequency Division Multiplexing radio technology that complies with IEEE802.11 Wireless LAN standard (Revision A, B or G).

- Theoretical maximum speed: 54Mbps (IEEE802.11a, 802.11g)
- Theoretical maximum speed: 11Mbps (IEEE802.11b)
- Frequency Channel Selection (Revision A: 5 GHz, Revision B/G: 2.4 GHz)
- Roaming over multiple channels
- Card Power Management
- Wired Equivalent Privacy (WEP) data encryption, based on the 128 bit encryption algorithm.
- Wi-Fi Protected Access (WPA).
- Advanced Encryption Standard (AES) data encryption.

The values shown above are the theoretical maximums for Wireless LAN standards. The actual values may differ.

The transmission speed over the wireless LAN, and the distance over which the wireless LAN can reach, may vary depending on surrounding electromagnetic environment, obstacles, access point design and configuration, client design and software/hardware configurations. The transmission rate described is the theoretical maximum speed as specified under the appropriate standard - the actual transmission speed will be lower than the theoretical maximum speed.

Security

- TOSHIBA strongly recommend that you enable WEP (encryption) functionality, otherwise your computer will be open to illegal access by an outsider using a wireless connection. If this occurs, the outsider may illegally access your system, eavesdrop, or cause the loss or destruction of stored data.
- TOSHIBA is not liable for the loss of data due to eavesdropping or illegal access through the wireless LAN and the damage thereof.
Bluetooth wireless technology

Bluetooth™ wireless technology eliminates the need for cables between electronic devices such as desktop computers, printers and mobile phones. You cannot use the built-in Bluetooth functions and an optional Bluetooth SD card 3 simultaneously.

Bluetooth wireless technology has the following features:

Worldwide operation

The Bluetooth radio transmitter and receiver operate in the 2.4 GHz band, which is license-free and compatible with radio systems in most countries in the world.

Radio links

You can easily establish links between two or more devices. The link is maintained even if the devices are not within line of sight.

Security

Two advanced security mechanisms ensure a high level of security:

- Authentication prevents access to critical data and makes it impossible to falsify the origin of a message.
- Encryption prevents eavesdropping and maintains link privacy.

Bluetooth™ Stack for Windows® by TOSHIBA

Please note that this software is specifically designed for the following operating systems:

- Microsoft® Windows® 2000 Professional
- Microsoft® Windows® XP

Detailed information regarding the use with these operating systems is listed below. Please refer also to the electronic information which is included with each software.

This Bluetooth™ Stack is based on Bluetooth™ Version 1.1/1.2/2.0+EDR specification. TOSHIBA cannot confirm compatibility between any PC products and/or other electronic devices that use Bluetooth™ other than TOSHIBA mobile PCs.
Release Notes related to the Bluetooth™ Stack for Windows® by TOSHIBA

1. Install:
   On Windows2000 or Windows XP, Bluetooth™ Stack for Windows® by TOSHIBA does not have a digital signature.

2. Fax application software:
   Regarding FAX application software, there are some software that you cannot use on this Bluetooth™ Stack.

3. Multi User:
   On Windows XP, the use of Bluetooth is not supported in a multi-user environment. This means that, when you use Bluetooth, other users logged onto the same computer will not be able to use its Bluetooth functionality.

Product Support:

The latest information regarding Operating System support, Language Support or available upgrades can be found on our web site http://www.toshiba-europe.com/computers/tnt/bluetooth.htm in Europe or www.pcsupport.toshiba.com in the United States.

Wireless communication switch

You can enable or disable Wireless LAN and Bluetooth functions, with the on/off switch. No transmissions are sent or received when the switch is off. Slide the switch to the right to turn it on and to the left to turn it off.

■ Do not use the WiFi or Bluetooth functionalities near a microwave oven or in areas subject to radio interference or magnetic fields. Interference from a microwave oven or other source can disrupt WiFi or Bluetooth operation.

■ Turn WiFi and Bluetooth functionalities off when near a person who may have a cardiac pacemaker implant or other medical electric device. Radio waves may affect pacemaker or medical device operation, possibly resulting in serious injury. Follow the instruction of your medical device when using any WiFi or Bluetooth functionality.

■ Always turn off WiFi or Bluetooth functionality if the PC is near automatic control equipment or appliances such as automatic doors or fire detectors. Radio waves can cause malfunction of such equipment, possibly resulting in serious injury.
Wireless communication Indicator

The wireless communication indicator indicates the status of the wireless communication functions.

<table>
<thead>
<tr>
<th>Indicator status</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicator off</td>
<td>Wireless communication switch is set to off. Automatic power down because of overheating. Power malfunction.</td>
</tr>
<tr>
<td>Indicator glows</td>
<td>Wireless communication switch is on. Wireless LAN or Bluetooth is turned on by an application.</td>
</tr>
</tbody>
</table>

If you used the Task Bar to disable the wireless LAN, restart the computer or perform the following procedure to re-enable it: start, Control Panel, System, Hardware Device Manager, Network adapters, Intel® PRO/Wireless 2200BG/2915ABG Network Connection and enable.

LAN

The computer has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T).

This section describes how to connect/disconnect to a LAN.

Do not install or remove an optional memory module while Wake-up on LAN is enabled.

The Wake-up on LAN function consumes power even when the system is off. Leave the AC adaptor connected while using this feature.

LAN cable types

The computer must be configured properly before connecting to a LAN. Logging onto a LAN using the computer’s default settings could cause a malfunction in LAN operation. Check with your LAN administrator regarding set-up procedures.

If you are using Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T), be sure to connect with a CAT5E cable or higher. You cannot use a CAT3 or CAT5 cable.

If you are using Fast Ethernet LAN (100 megabits per second, 100BASE-TX), be sure to connect with a CAT5 cable or higher. You cannot use a CAT3 cable.

If you are using Ethernet LAN (10 megabits per second, 10BASE-T), you can connect with a CAT3 or higher.
Connecting LAN cable

To connect the LAN cable, follow the steps below.

- **Connect the AC adaptor before connecting the LAN cable.** The AC adaptor must remain connected during LAN use. If you disconnect the AC Adaptor while the computer is accessing a LAN, the system may hang up.
- **Do not connect any other cable to the LAN jack except the LAN cable.** Otherwise, malfunctions or damage may occur.
- **Do not connect any power supplying device to the LAN cable that is connected to the LAN jack.** Otherwise, malfunctions or damage may occur.

1. Turn off the power to the computer and to all external devices connected to the computer.
2. Plug one end of the cable into the LAN jack. Press gently until you hear the latch click into place.

   ![LAN connector and LAN jack]

3. Plug the other end of the cable into a LAN hub connector. Check with your LAN administrator before connecting to a hub.

   *When the computer is exchanging data with the LAN, the LAN Active indicator glows orange. When the computer is connected to a LAN hub but is not exchanging data, the Link indicator glows green.*

Disconnecting LAN cable

To disconnect the LAN cable, follow the steps below.

- **Make sure the LAN Active indicator (orange LED) is out before you disconnect the computer from the LAN.**

1. Pinch the lever on the connector in the computer’s LAN jack and pull out the connector.
2. Disconnect the cable from the LAN hub in the same manner. Check with your LAN administrator before disconnecting from the hub.
Cleaning the computer

To help ensure long, trouble-free operation, keep the computer free of dust and use care with liquids around the computer.

- Be careful not to spill liquids into the computer. If the computer does get wet, turn the power off immediately and let the computer dry completely before you turn it on again.
- Clean the computer using a slightly damp (with water) cloth. You can use glass cleaner on the LCD display screen. Spray a small amount of cleaner on a soft, clean cloth and wipe the screen gently with the cloth.

Moving the computer

The computer is designed for rugged durability. However, a few simple precautions taken when moving the computer will help ensure trouble-free operation.

- Before moving the computer, it recommends changing the function of HDD Protection. Refer to the section, Using the Hard Disk Drive (HDD) Protection, in this chapter.
- Make sure all disk activity has ended before moving the computer. Check the HDD indicator on the computer.
- If a CD/DVD is in the drives, remove it. Also make sure the disc tray is securely closed.
- Turn off the power to the computer.
- Disconnect the AC adaptor and all peripherals before moving the computer.
- Close the LCD display panel. Do not pick up the computer by its display panel.
- Before carrying your computer, shut down the computer, disconnect the power cable and wait until the PC cools down. Failure to follow this instruction could result in minor injury.
- Always turn off the power when you move the computer. If the power button has a lock, set it to the lock position. Also be careful not to subject the computer to impact. Failure to follow this instruction could result in damage to computer, computer failure or loss of data.
- Never transport your computer with PC cards installed. This could cause damage to your computer and/or PC card, resulting in product failure.
- Use the carrying case when transporting the computer.
- When carrying your computer, be sure to hold it securely so that it does not fall or hit anything.
- Do not carry your computer by holding protruded portions.

Never spray cleaner directly onto the computer or let liquid run into any part of it. Never use harsh or caustic chemical products to clean the computer.
Using the Hard Disk Drive (HDD) Protection

This computer has a function for reducing the risk of damage on hard disk drive.

Using the acceleration sensor built in the computer, HDD Protection detects vibration, shocks, and those signs in the computer, and automatically moves the HDD (Hard Disk Drive) head to the safe position to reduce the risk of damage that could be caused to the disk by head-to-disk contact.

- This function does not guarantee that the hard disk drive will not be damaged.
- A secondary hard disk drive fitted to the computer is not supported by the HDD protection function.

When vibration is detected, the following message is displayed, and the icon in the notification area of the taskbar is changed to the protection state. This message is displayed until the OK button is pressed or 30 seconds pass. When vibration subsides, the icon returns to the normal state.

Taskbar Icon

<table>
<thead>
<tr>
<th>State</th>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td></td>
<td>HDD Protection is enabled.</td>
</tr>
<tr>
<td>Protection</td>
<td></td>
<td>HDD Protection is active. The hard disk drive head is in a safe position.</td>
</tr>
<tr>
<td>OFF</td>
<td></td>
<td>HDD Protection is disabled.</td>
</tr>
</tbody>
</table>
TOSHIBA HDD Protection Properties

You can make the HDD Protection settings by using the TOSHIBA HDD Protection Properties window. To open the window, click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Utilities** and click **HDD Protection setting**. The window can also be started from the icon on the Taskbar, or from the Control Panel.

**HDD Protection**

You can choose whether to enable or disable HDD Protection.

**Detection Level**

This function can be set to four levels. The sensitivity levels in which vibrations, impacts and their similar signs are detected can be set to OFF, 1, 2 and 3 in ascending order. Level 3 is recommended for better protection of the computer. However, when the computer is used as handheld or in other unstable conditions, setting the detection level to 3 could result in frequent execution of HDD Protection, which will slow HDD reading and writing. Set a lower detection level when the speed of HDD reading and writing is a priority.

Different detection levels can be set depending on whether the computer is used as handheld or mobile usages, or whether it is used in a stable environment such as on a table in the workplace or at home. By setting different detection levels for the computer depending on whether it runs with the AC power (desktop) or with batteries (handheld or mobile usage), the detection level automatically switches according to the power connection mode.
Details

To open the Details window, click the Setup Detail button in the TOSHIBA HDD Protection Properties window.

Detection Level Amplification

When the AC adaptor is disconnected or the lid is closed, HDD Detection assumes that the computer will be carried and sets the detection level to the maximum for 10 seconds.

HDD Protection Message

Specify whether to display a message when HDD Protection is active.

- This function does not work when the computer is starting, in standby, in hibernation, in transition to hibernation, recovering from hibernation, or powered off. Be sure to not subject the computer to vibration or impact while the function is disabled.
- This function supports only Windows® XP.

Heat dispersal

To protect from overheating, the CPU has an internal temperature sensor. If the computer's internal temperature rises to a certain level, the cooling fan is turned on or the processing speed is lowered. You can select whether to control the CPU temperature by turning on the fan first, then if necessary, lowering the CPU speed. Or, by lowering the CPU speed first, then if necessary, turning on the fan. Use the Cooling Method item of the Basic Setup tab in TOSHIBA Power Saver.

When the CPU temperature falls to a normal range, the fan is turned off and the CPU operation returns to standard speed.

- If the CPU temperature reaches an unacceptably high level with either setting, the system automatically shuts down to prevent damage. Data in memory will be lost.
Chapter 5

The Keyboard

The computer’s keyboard layouts are compatible with a 101/102-key enhanced keyboard. By pressing some keys in combination, all the 101/102-key keyboard functions can be executed on the computer.

The number of keys on your keyboard depends on which country/region’s keyboard layout your computer is configured with. Keyboards for numerous languages are available.

There are six types of keys: typewriter keys, function keys, soft keys, Hot keys, Windows special keys and keypad overlay.

Typewriter keys

The typewriter keys produce the upper- and lower-case letters, numbers, punctuation marks, and special symbols that appear on the screen.

There are some differences, however, between using a typewriter and using a computer keyboard:

- Letters and numbers produced in computer text vary in width. Spaces, which are created by a “space character,” may also vary depending on line justification and other factors.
- The lowercase l (el) and the number 1 (one) are not interchangeable on computers as they are on a typewriter.
- The uppercase O (oh) and the 0 (zero) are not interchangeable.
- The **Caps Lock** function key locks only the alphabetic characters in uppercase while the shift lock on a typewriter places all keys in the shifted position.
- The **Shift** keys, the **Tab** key, and the **BkSp** (backspace) key perform the same function as their typewriter counterparts but also have special computer functions.
Function keys: F1 ... F12

The function keys (not to be confused with Fn) are the 12 keys at the top of your keyboard. These keys function differently from other keys.

F1 through F12 are called function keys because they execute programmed functions when pressed. Used in combination with the Fn key, keys marked with icons execute specific functions on the computer. Refer to the section, Soft keys: Fn key combinations, in this chapter. The function executed by individual keys depends on the software you are using.

Soft keys: Fn key combinations

The Fn (function) is unique to TOSHIBA computers and is used in combination with other keys to form soft keys. Soft keys are key combinations that enable, disable or configure specific features.

Some software may disable or interfere with soft-key operations. Soft-key settings are not restored by the Standby feature.

Emulating keys on enhanced keyboard

The keyboard is designed to provide all the features of the 101-key enhanced keyboard. The 101/102-key enhanced keyboard has a numeric keypad and scroll lock key. It also has additional Enter and Ctrl keys to the right of the main keyboard. Since the keyboard is smaller and has fewer keys, some of the enhanced keyboard functions must be simulated using two keys instead of one on the larger keyboard.

Your software may require you to use keys that the keyboard does not have. Pressing the Fn key and one of the following keys simulates the enhanced keyboard’s functions.
Press **Fn + F10** or **Fn + F11** to access the integrated keypad. When activated, the keys with gray markings on the bottom edge become numeric keypad keys (**Fn + F11**) or cursor control keys (**Fn + F10**). Refer to the *Keypad overlay* section in this chapter for more information on how to operate these keys. The power on default for both settings is off.

Press **Fn + F12** (**ScrLock**) to lock the cursor on a specific line. The power on default is off.

Press **Fn + Enter** to simulate **Enter** on the enhanced keyboard’s numeric keypad.

Press **Fn + Ctrl** to simulate the enhanced keyboard’s right **Ctrl** key.

**Hot keys**

Hot keys (**Fn + a function or Esc key**) let you enable or disable certain features of the computer.

**Sound mute:** Pressing **Fn + Esc** in a Windows environment turns sound on or off. When you press these hot keys, the current setting will change and be displayed as an icon.
Instant security: Press \texttt{Fn} + \texttt{F1} to blank the screen to prevent others from accessing your data. To restore the screen and original settings, press any key or press the Dual Pointing Device. If a screensaver password is registered, a dialog box will appear. Enter the screensaver password and click \texttt{OK}. If no password is set, the screen will be restored when you press any key or press the Dual Pointing Device.

Power save mode: Pressing \texttt{Fn} + \texttt{F2} changes the power save mode. If you press \texttt{Fn} + \texttt{F2} in a Windows environment, the settings dialog box for the Power Save Mode will be displayed. Continue holding down \texttt{Fn}, and release and press \texttt{F2} again to toggle between the settings. Release both \texttt{Fn} and \texttt{F2} to put the new setting into effect. You can also change this setting through the \textit{Profile} options in TOSHIBA Power Saver.

Standby: When you press \texttt{Fn} + \texttt{F3}, the computer enters the Standby Mode. Before entering Standby, a dialog box appears asking for your confirmation. This dialog box will not be displayed in the future when you click the check box.

Hibernation: When you press \texttt{Fn} + \texttt{F4}, the computer enters the Hibernation Mode. Before entering Hibernation, a dialog box appears asking for your confirmation. This dialog box will not be displayed in the future when you click the check box.
Display selection: Press **Fn** + **F5** to change the active display device. When you press these hot keys, a dialog box appears. Only selectable devices will be displayed. Hold down **Fn** and press **F5** again to change the device. When you release **Fn** and **F5**, the selected device will change. If you hold down these hot keys for five seconds the selection will return to the internal LCD.

Internal LCD screen Brightness: Pressing **Fn** + **F6** decreases the LCD screen brightness in decrements. When you press these hot keys, the current setting will be displayed for two seconds by an icon. You can also change this setting through the *Screen brightness* item of the *Basic Setup* tab in TOSHIBA Power Saver.

Internal LCD screen Brightness: Pressing **Fn** + **F7** increases the LCD screen brightness in increments. When you press these hot keys, the current setting will be displayed for two seconds by a pop-up icon. You can also change this setting through the *Screen brightness* item of the *Basic Setup* tab in TOSHIBA Power Saver.

Wireless setting: If your computer has both Bluetooth and Wireless LAN functions, you can press **Fn** + **F8** to select which type of wireless communication you want to use. When you press these hot keys, a dialog box will appear. Continue holding down **Fn** and press **F8** to change the setting. If wireless communication is turned off, **Disabled Wireless Communication Switch** will be displayed.

---

**The brightness level is always set at the maximum value for about 18 seconds, when the internal LCD screen turns on.**

**LCD screen clarity increases with the brightness level.**

**If no wireless communication device is installed, no dialog box will appear.**
The Keyboard

Dual Pointing Device: Pressing **Fn + F9** in a windows environment enables or disables the Dual Pointing Device function. When you press these hot keys, the current setting will change and be displayed as an icon.

LCD screen resolution selection: Press **Fn + Space** keys to change the display resolution. Each time when you press these hot keys, the LCD screen resolution changes as follows: The available resolution depends on the model. With XGA, you can change the resolution between 800 × 600 and 1024 × 768 pixels. With SXGA, between 800 × 600 and 1400 × 1050 pixels.

Optical media drive power: Press the **Fn + Tab** keys to turn the power of the optical media drive on or eject the disc tray. A dialog box is displayed when this hotkey is pressed. To choose between the functions, press the Tab key while holding down the **Fn** key. The chosen function is executed when the **Fn + Tab** keys are released.

TOSHIBA Zooming Utility (reduce): To reduce the icon size on the desktop or the application window, press the **1** key while holding down the **Fn** key.

TOSHIBA Zooming Utility (enlarge): To enlarge the icon size on the desktop or the application window, press the **2** key while holding down the **Fn** key.

**Fn Sticky key**

You can use the TOSHIBA Accessibility Utility to make the **Fn** key sticky, that is, you can press it once, release it, and then press an “**F number**” key. To start the TOSHIBA Accessibility Utility, click **start**, point to **All Programs**, point to **TOSHIBA**, point to **Utilities** and click **Accessibility**.
Windows special keys

The keyboard provides two keys that have special functions in Windows: Windows logo key activates the start menu and the other, the application key, has the same function as the secondary mouse button.

This key activates the Windows start menu.

This key has the same function as the secondary mouse button.

Keypad overlay

Your computer’s keyboard does not have an independent numeric keypad, but its numeric keypad overlay functions like one.

The keys in the center of the keyboard with gray letters make up the numeric keypad overlay. The overlay provides the same functions as the numeric keypad on the 101/102-key enhanced keyboard in figure 5-2.

Turning on the overlays

The numeric keypad overlay can be used for numeric data input or cursor and page control.

Arrow mode

To turn on the Arrow mode, press $\text{Fn} + \text{F10}$. The Arrow mode indicator lights. Now try cursor and page control using the keys shown in the figure below. Press $\text{Fn} + \text{F10}$ again to turn off the overlay.

Numeric mode

To turn on the Numeric mode, press $\text{Fn} + \text{F11}$. The Numeric mode indicator lights. Now try numeric data entry using the keys in the figure below. Press $\text{Fn} + \text{F11}$ again to turn off the overlay.
Temporarily using normal keyboard (overlay on)

While using the overlay, you can temporarily access the normal keyboard without turning off the overlay:

1. Hold **Fn** and press any other key. All keys will operate as if the overlay were off.
2. Type upper-case characters by holding **Fn** + **Shift** and pressing a character key.
3. Release **Fn** to continue using the overlay.

Temporarily using overlay (overlay off)

While using the normal keyboard, you can temporarily use the keypad overlay without turning it on:

1. Press and hold down **Fn**.
2. Check the keyboard indicators. Pressing **Fn** turns on the most recently used overlay. If the Numeric mode indicator lights, you can use the overlay for numeric entry. If the Arrow mode indicator lights, you can use the overlay for cursor and page control.
3. Release **Fn** to return to normal keyboard operation.

Temporarily changing modes

If the computer is in **Numeric mode**, you can switch temporarily to **Arrow mode** by pressing a shift key.

If the computer is in **Arrow mode**, you can switch temporarily to **Numeric mode** by pressing a shift key.
Generating ASCII characters

Not all ASCII characters can be generated using normal keyboard operation. But, you can generate these characters using their ASCII codes.

With the overlay on:
1. Hold down **Alt**.
2. Using the overlay keys, type the ASCII code.
3. Release **Alt**, and the ASCII character appears on the display screen.

With the overlay off:
1. Hold down **Alt + Fn**.
2. Using the overlay keys, type the ASCII code.
3. Release **Alt + Fn**, and the ASCII character appears on the display screen.
The computer’s power resources include the AC adaptor, battery pack and internal batteries. This chapter gives details on making the most effective use of these resources including charging and changing batteries, tips for saving battery power, and power up modes.

### Power conditions

The computer’s operating capability and battery charge status are affected by the power conditions: whether an AC adaptor is connected, whether a battery pack is installed and what the charge level is for the battery.

<table>
<thead>
<tr>
<th>Power conditions</th>
<th>Power on</th>
<th>Power off (no operation)</th>
</tr>
</thead>
<tbody>
<tr>
<td>AC adaptor connected</td>
<td>Battery fully charged</td>
<td>• Operates</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• LED: <strong>Battery</strong> green</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DC IN green</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>LED:</strong> Battery off</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>DC IN</strong> green</td>
</tr>
<tr>
<td>Battery partially</td>
<td>• Operates</td>
<td>• Quick charge</td>
</tr>
<tr>
<td>charged or no charge</td>
<td>• Quick Charge</td>
<td>• <strong>LED:</strong> Battery orange</td>
</tr>
<tr>
<td></td>
<td>• LED: <strong>Battery</strong> orange</td>
<td>• <strong>DC IN</strong> green</td>
</tr>
<tr>
<td></td>
<td>• DC IN green</td>
<td></td>
</tr>
<tr>
<td>No battery installed</td>
<td>• Operates</td>
<td>• <strong>LED:</strong> Battery off</td>
</tr>
<tr>
<td></td>
<td>• No charge</td>
<td>• <strong>DC IN</strong> green</td>
</tr>
<tr>
<td></td>
<td>• <strong>LED:</strong> Battery off</td>
<td></td>
</tr>
</tbody>
</table>
Power indicators

As shown in the above table, the **Battery**, **DC IN** and **Power** indicators on the system indicator alert you to the computer’s operating capability and battery charge status.

**Battery indicator**

Check the **Battery** indicator to determine the status of the battery pack. The following indicator lights indicate the battery status:

<table>
<thead>
<tr>
<th>Flashing orange</th>
<th>The battery charge is low. The AC adaptor must be connected to recharge the battery.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orange</td>
<td>Indicates the AC adaptor is connected and charging the battery.</td>
</tr>
<tr>
<td>Green</td>
<td>Indicates the AC adaptor is connected and the battery is fully charged.</td>
</tr>
<tr>
<td>No light</td>
<td>Under any other conditions, the indicator does not light.</td>
</tr>
</tbody>
</table>

*If the battery pack becomes too hot while it is being charged, the charge will stop and the Battery indicator will go out. When the battery pack’s temperature falls to a normal range, charge will resume. This occurs whether the computer’s power is on or off.*
**DC IN indicator**

Check the **DC IN** indicator to determine the power status with the AC adaptor connected:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Indicates the AC adaptor is connected and supplying proper power to the computer.</td>
</tr>
<tr>
<td>Flashing orange</td>
<td>Indicates a problem with the power supply. Plug the AC adaptor into another power outlet. If it still does not operate properly, contact your dealer.</td>
</tr>
<tr>
<td>No light</td>
<td>Under any other conditions, the indicator does not light.</td>
</tr>
</tbody>
</table>

**Power indicator**

Check the **Power** indicator to determine the power status:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Indicates power is being supplied to the computer and the computer is turned on.</td>
</tr>
<tr>
<td>Flashing orange</td>
<td>Indicates power is being supplied to the computer while the computer is in Standby Mode. The indicator turns on for one second and off for two seconds.</td>
</tr>
<tr>
<td>No light</td>
<td>Under any other conditions, the indicator does not light.</td>
</tr>
</tbody>
</table>

**Battery types**

The computer has three types of batteries:

- **Battery pack**
- **High capacity battery pack (option)**
- **Real Time Clock (RTC) battery**

**Battery pack**

When the AC adaptor is not connected, the computer’s main power source is a removable lithium ion battery pack, also referred to in this manual as the main battery. You can purchase additional battery packs for extended use of the computer away from an AC power source.

Do not change the battery pack while the AC adaptor is connected.

Before you remove the battery pack, save your data and shut down the computer, or set the computer to Hibernation Mode. While entering Hibernation Mode, the computer saves the contents of memory to the hard disk drive. However, for safety sake, it is best to save your data manually.
To ensure that the battery pack maintains its maximum capacity, operate the computer on battery power at least once a month until the battery pack is fully discharged. Refer to Extending battery life in this chapter for procedures. If the computer is continuously operated on AC power through an AC adaptor for an extended period, more than a month, the battery may fail to retain a charge. It may not function efficiently over the expected life of the battery and the Battery indicator may not indicate a low-battery condition.

**High capacity battery pack (option)**

An optional High capacity battery pack is installable instead of a main battery pack. The connection method of High capacity battery pack is the same as that of main battery pack.

- Always use the battery pack supplied as an accessory or an equivalent battery pack specified in the User’s Manual. Other battery packs have different voltage and terminal polarities. Use of non-conforming battery packs could generate smoke or cause fire or rupture, possibly resulting in serious injury.

- Always dispose of used battery packs in compliance with all applicable laws and regulations. Put insulating tape, such as cellophane tape, on the electrode during transportation to avoid a possible short circuit, fire or electric shock. Failure to do so could possibly result in serious injury.

- Do not remove the battery pack while the computer is in Standby Mode. Data is stored in RAM, so if the computer loses power it will be lost. When the computer is powered off in Standby Mode, and the AC adaptor is not connected, the battery pack supplies power to maintain data and programs in memory. If the battery pack is completely discharged, Standby Mode will not function and the computer loses all data in memory.

- The battery pack is a lithium ion battery, which can explode if not properly replaced, used, handled or disposed of. Dispose of the battery as required by local ordinances or regulations. Use only batteries recommended by TOSHIBA as replacements.

- Do not remove the battery pack while the computer is in Standby Mode. Data is stored in RAM, so if the computer loses power it will be lost. When the computer is powered off in Standby Mode, and the AC adaptor is not connected, the main battery pack supply power to maintain data and program in memory. If the battery pack is completely discharged, Standby Mode does not function and the computer loses all data in memory.

- When the High capacity battery pack is connected to the computer, do not forget to hold the High capacity battery pack when lifting the computer up. Otherwise, the High capacity battery pack may separate from the computer, causing it to fall and cause injuries.
Real Time Clock (RTC) battery

The Real Time Clock (RTC) battery provides power for the internal real time clock and calendar. It also maintains the system configuration. If the RTC battery becomes completely discharged, the system loses this data and the real time clock and calendar stop working. The following message appears when you turn on the power:

**** RTC battery is low or CMOS checksum is inconsistent ****
Press [F1] key to set Date/Time.

You can change the Real Time Clock settings by pressing the F1 key. Refer to Chapter 9, Troubleshooting, for details.

The computer’s RTC battery is a Ni-MH battery and should be replaced only by your dealer or by a TOSHIBA service representative. The battery can explode if not properly replaced, used, handled or disposed of. Dispose of the battery as required by local ordinances or regulations.

Care and use of the battery pack

The battery pack is a vital component of portable computing. Taking proper care of it will help ensure longer operating time on battery power as well as a longer life for your battery pack. Follow the instructions in this section carefully to ensure safe operation and maximum performance.

Safety precautions

Mishandling of battery packs can cause death, serious injury or property damage. Carefully observe the following advisories:

Warning: Indicates a potentially hazardous situation, which could result in death or serious injury, if you do not follow instructions.

Caution: Indicates a potentially hazardous situation, which if not avoided, may result in moderate or minor injury or property damage.

Note: Provides important information.

Warning

1. Never attempt to dispose of a battery pack by burning or by throwing it into a fire, and never allow exposure to a heating apparatus (e.g., microwave oven). Heat can cause a battery pack to explode and possibly cause serious injury.

2. Never attempt to disassemble, tamper with or repair a battery pack. The battery pack could overheat and ignite. Leakage of the caustic alkaline solution or other electrolytic substances could cause fire, possibly resulting in death or serious injury.
3. Never short circuit the battery pack by either accidentally or intentionally bringing the battery terminals in contact with another conductive object. This could cause serious injury or a fire, and could also damage the battery pack. Always wrap the battery pack in plastic (or place it in a plastic bag) whenever transporting it, to avoid exposing the terminals to another conductive object which could result in serious injury. Always cover the metal terminals with insulating tape when disposing of the battery pack, to prevent accidental short circuiting which could result in serious injury.

4. Never drive a nail or any other sharp object into the battery pack, hit battery pack with a hammer or other object or step on it. Doing so could cause a fire or explosion possibly resulting in serious injury.

5. Never charge the battery pack by a method other than as instructed in the User’s Manual. Doing so could cause a fire or explosion possibly resulting in serious injury.

6. Never connect the battery pack to a plug socket or a car cigarette plug socket. The battery pack could rupture or ignite causing a fire or explosion possibly resulting in serious injury.

7. Never allow a battery pack to become wet. A wet battery pack will overheat or ignite causing rupture or fire, possibly resulting in death or serious injury.

8. Never store a battery pack in an area of high humidity. This could cause a fire or explosion possibly resulting in serious injury.

9. Never expose a battery pack to abnormal shock, vibration or pressure. The battery pack’s internal protective device could fail, causing it to overheat or ignite resulting in caustic liquid leakage, or explosion or fire, possibly resulting in death or serious injury.

10. Never subject a battery pack to heat, and never store it or use it near a heat source. The battery pack could ignite or explode when heated or burned, possibly resulting in death or serious injury. Subjecting a battery pack to heat could also cause caustic liquid to leak. It can also cause failure, malfunction, or loss of stored data.

11. Always use the battery pack supplied as an accessory or an equivalent battery pack specified in the User’s Manual. Other battery packs have different voltage and terminal polarities. Use of non-conforming battery packs could generate smoke or cause fire or rupture, possibly resulting in serious injury.

12. Never allow caustic electrolyte fluid leaked from the battery pack to contact your eyes, body or clothing. If caustic electrolyte fluid from the battery pack should contact your eyes, immediately wash your eyes with large amounts of running water and obtain prompt medical attention, to help prevent permanent eye damage. If electrolyte fluid should contact any part of your body, immediately wash it off under running water to help prevent skin rashes. If electrolyte fluid should contact your clothes, promptly remove them to help prevent the electrolyte fluid from contacting your body, possibly resulting in serious injury.
13. Always immediately turn the power off and disconnect the power cable plug from the plug socket if you observe any of the following conditions:

- Offensive or unusual odor
- Excessive heat
- Discoloration
- Deformation
- Smoke
- Other unusual event during use, such as abnormal sound

In such an event, immediately remove the battery pack from the PC. In some instances, you might have to wait for the PC to cool down before removing the battery pack, in order to avoid any possible minor injury due to heat exposure. Do not turn on the PC's power again until an authorized Toshiba service provider has checked it for safety. Continued use could cause a fire or rupture possibly resulting in serious injury or PC failure including but not limited to the loss of data.

14. Always dispose of used battery packs in compliance with all applicable laws and regulations. Put insulating tape, such as cellophane tape, on the electrode during transportation to avoid a possible short circuit, fire or electric shock. Failure to do so could possibly result in serious injury.

15. Make sure the battery is securely installed in the computer before attempting to charge the battery pack. Improper installation could generate smoke or fire, or cause the battery pack to rupture.

16. Keep the battery pack out of reach of infants and children. It can cause injury.

**Caution**

1. Use only battery packs recommended by TOSHIBA as replacements.
2. When installing a battery pack or before moving the PC, always make sure the battery pack is inserted correctly and securely. If the battery falls out, while you are carrying the PC, you could be injured or the battery pack could be damaged.
3. Charge the battery pack only in an ambient temperature between 5 and 35 degrees Celsius. Otherwise, the electrolyte solution might leak, battery pack performance might deteriorate and the battery life might be shortened.
4. Never continue to use a battery pack after its recharging capability has become impaired, or after the warning message indicating that the battery pack power is exhausted has been displayed.
5. Continued use of an exhausted or impaired battery pack could result in the loss of data or damage to PC.
6. Never install or remove the battery pack without first turning off the power and disconnecting the AC adaptor. Never remove the battery pack while the computer is in Standby Mode. Data will be lost.
Note

1. Never remove the battery pack while the Wake-up on LAN function is enabled. Data will be lost. Before you remove a battery pack, disable the Wake-up on LAN function.

2. To ensure the battery pack maintains maximum capacity, operate the computer on battery power once a week until the battery pack is fully discharged. Refer to the section Extending battery life in this chapter for procedures. If the computer is continuously operated on AC power for an extended period, more than a week, the battery might fail to retain a charge. It might not function efficiently over the expected life of the battery pack and the Battery indicator might not indicate a low-battery condition.

3. After the battery pack is charged, avoid leaving the AC adaptor connected and the computer turned off for more than a few hours at a time. Continuing to charge a fully-charged battery pack can damage the battery.

Charging the batteries

When the power in the battery pack becomes low, the Battery indicator flashes orange indicating that only a few minutes of battery power remain. If you continue to use the computer while the Battery indicator flashes, the computer enables Hibernation Mode (so you don’t lose data) and automatically turns off.

The computer enters Hibernate mode only if Hibernation is enabled in two places: the Hibernate tab in Power Options and Setup Actions tab in TOSHIBA Power Saver.

You must recharge a battery pack when it becomes discharged.

Procedures

To recharge a battery pack while it is installed in the computer, connect the AC adaptor to the DC IN 15V jack and plug the other end into a working outlet.

The Battery indicator glows orange when the battery is being charged.

Use only the computer connected to an AC power source or the optional TOSHIBA Battery charger to charge the battery pack. Never attempt to charge the battery pack with any other charger.
**Power and Power-Up Modes**

**Time**

The following table shows the approximate time required to fully charge a discharged battery.

<table>
<thead>
<tr>
<th>Battery type</th>
<th>Power on</th>
<th>Power off</th>
</tr>
</thead>
<tbody>
<tr>
<td>High capacity battery pack (8800mAh)</td>
<td>about 5.0 to 21.5</td>
<td>about 4.5</td>
</tr>
<tr>
<td>Battery pack (4700mAh)</td>
<td>about 3.5 to 13.0</td>
<td>about 3.0</td>
</tr>
<tr>
<td>RTC battery</td>
<td>8</td>
<td>Doesn’t charge</td>
</tr>
</tbody>
</table>

*The charging time when the computer is on is affected by ambient temperature, the temperature of the computer and how you use the computer. If you make heavy use of external devices, for example, the battery might scarcely charge at all during operation. Refer also to the section Maximizing battery operating time.*

**Battery charging notice**

The battery may not charge right away under the following conditions:

- The battery is extremely hot or cold. If the battery is extremely hot, it might not charge at all. To ensure the battery charges to its full capacity, charge the battery at room temperature of 10° to 30°C (50° to 88°F).
- The battery is nearly completely discharged. Leave the AC adaptor connected for a few minutes and the battery should begin charging.

The Battery indicator may show a rapid decrease in battery operating time when you try to charge a battery under the following conditions:

- The battery has not been used for a long time.
- The battery has completely discharged and been left in the computer for a long time.
- A cool battery is installed in a warm computer.

In such case, follow the steps below.

1. Fully discharge the battery by leaving it in the computer with the power on until the power automatically shuts off.
2. Connect the AC adaptor to the DC IN 15V jack of the computer, and the AC adaptor into power outlet.
3. Charge the battery until the Battery indicator glows green.

Repeat these steps two or three times until the battery recovers normal capacity.

*Leaving the AC adaptor connected will shorten battery life. At least once a month, run the computer on battery power until the battery is fully discharged, then recharge the battery.*
Monitoring battery capacity

Remaining battery power can be monitored in TOSHIBA Power Saver.

- Wait at least 16 seconds after turning on the computer before trying to monitor the remaining operating time. The computer needs this time to check the battery’s remaining capacity and to calculate the remaining operating time, based on the current power consumption rate and remaining battery capacity. The actual remaining operating time may differ slightly from the calculated time.

- With repeated discharges and recharges, the battery’s capacity will gradually decrease. Therefore, an often used, older battery will not operate for as long as a new battery even when both are fully charged. In this case, TOSHIBA Power Saver will indicate a 100% charge for both the old and new battery, but the displayed estimated time remaining will be shorter for the older battery.

Maximizing battery operating time

A battery’s usefulness depends on how long it can supply power on a single charge.

How long the charge lasts in a battery depends on:

- How you configure the computer (for example, whether you enable battery-power saving options). The computer provides a battery save mode, which can be set in TOSHIBA Power Saver, to conserve battery power. This mode has the following options:
  - CPU Processing speed
  - Screen brightness
  - Cooling Method
  - System standby
  - System Hibernation
  - Monitor Power off
  - HDD Power off
- How often and how long you use the hard disk, optical disc and the floppy disk drive.
- How much charge the battery contained to begin with.
- How you use optional devices, such as a PC card, to which the battery supplies power.
- Enabling Standby Mode conserves battery power if you are frequently turning the computer off and on.
- Where you store your programs and data.
- Closing the LCD display panel when you are not using the keyboard saves power.
- Operating time decreases at low temperatures.
- The condition of the battery terminals. Make sure the battery terminals stay clean by wiping them with a clean dry cloth before installing the battery pack.
Retaining data with power off

When you turn off your computer with fully charged batteries, the batteries retain data for the following approximate time periods:

<table>
<thead>
<tr>
<th>Battery type</th>
<th>State and Retention Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>High capacity battery pack (8800mAh)</td>
<td>about 9 days (Standby Mode) about 135 days (Boot mode)</td>
</tr>
<tr>
<td>Battery pack (4700mAh)</td>
<td>about 5 days (Standby Mode) about 70 days (Boot mode)</td>
</tr>
<tr>
<td>RTC battery</td>
<td>30 days</td>
</tr>
</tbody>
</table>

Extending battery life

To maximize the life of your battery pack:

- At least once a month, disconnect the computer from a power source and operate it on battery power until the battery pack fully discharges. Before doing so, follow the steps below.

1. Turn off the computer’s power.
2. Disconnect the AC adaptor and turn on the computer’s power. If it does not turn on go to step 4.
3. Operate the computer on battery power for five minutes. If the battery pack has at least five minutes of operating time, continue operating until the battery pack is fully discharged. If the Battery indicator flashes or there is some other warning to indicate a low battery, go to step 4.
4. Connect the AC adaptor to the computer and the power cord to a power outlet. The DC IN indicator should glow green, and the Battery indicator should glow orange to indicate that the battery pack is being charged. If the DC IN indicator does not glow, power is not being supplied. Check the connections for the AC adaptor and power cord.
5. Charge the battery pack until the Battery indicator glows green.

- If you have extra battery packs, rotate their use.
- If you will not be using the system for an extended period, more than one month, remove the battery pack.
- Disconnect the AC adaptor when the battery is fully charged. Overcharging makes the battery hot and shortens life.
- If you are not going to use the computer for more than eight hours, disconnect the AC adaptor.
- Store spare battery packs in a cool dry place out of direct sunlight.
Replacing the battery pack

The battery pack is classified as a consumable item. The operating life of the battery pack will gradually reduce through repeated charging and discharging. It will need to be replaced when it reaches the end of its operating life.

You might also replace a discharged battery pack with a charged spare when you are operating your computer away from an AC power source. This section explains how to remove and install the battery pack. To remove a discharged battery pack, follow the steps below.

- Do not remove the battery pack while the computer is in Standby Mode. Data is stored in RAM, so if the computer loses power it will be lost.
- In Hibernation Mode, data will be lost if you remove the battery pack or disconnect the AC adapter before the save is completed. Wait for the HDD indicator to go out.
- Do not touch the battery release latch while holding the computer or the battery pack might fall out due to the unintentional release of the battery release latch and cause injuries.

1. Save your work.
2. Turn the computer's power off. Make sure the Power indicator is off.
3. Remove all cables connected to the computer.
4. Close the LCD display panel and turn the computer upside down.
5. Slide the battery lock (1) to the unlock position ( ). (Move it completely to the left).
6. Slide and hold the battery release latch (2) to disengage the battery pack, then remove the battery pack (3).

Releasing the battery pack
To install a battery pack, follow the steps below.

**Do not touch the battery release latch while holding the computer. Or you may get injured by the dropped battery pack by unintentional release of the battery release latch.**

7. Insert the battery pack all the way to the end (1).
8. Make sure that the battery pack is securely in place and the battery safety lock (2) is in the lock position (locking the lock).

9. Turn your computer over.

**TOSHIBA Password Utility**

The TOSHIBA Password Utility provides two levels of password security: User and Supervisor.

*Passwords set in TOSHIBA Password Utility are different from the Windows password.*

**User Password**

To start the utility, point to or click the following items:

```
start -> All Programs -> TOSHIBA -> Utilities -> Password Utility
```

The User Password dialog box contains two main fields: **User Password** and **User Token**.

User authentication may be required to validate user rights when using “TOSHIBA Password Utility” to delete or change passwords, or create tokens, etc.
**User Password field**

- **Set** (button)
  Click this button to register a password of up to 50 characters. After a password is set, you will be prompted to enter it when you start the computer.

- **Delete** (button)
  Click this button to delete a registered password. Before you can delete a password, you must first enter the current password correctly or insert a proper token.

- **Change** (button)
  Click this button to change a registered password. Before you can change a password, you must first enter the current password correctly or insert a proper token.

- **Owner String** (text box)
  You can use this box to associate text with the password. After you enter text, click Apply or OK. When the computer is started, this text will be displayed together with the prompt asking you to enter a password.

**User Token field**

- **Create** (button)
  You can use an SD card token, instead of entering the password. After you have registered a password, insert an SD card in SD card slot and click **Create**. You can use an SD card of any capacity, but it must be formatted correctly.

  If an unformatted card or one with an incompatible format is inserted, you will be prompted to format it with a tool named TOSHIBA SD Memory Card Format. To start the format tool, point to or click the following items:

  `start -> All Programs -> TOSHIBA -> Utilities -> SD Memory Card Format`

  **Warning:** When you format an SD Memory card, all data will be deleted. Be sure to save data on the card to other media before you format the card.

- **Disable** (button)
  Click this button to invalidate the token. You cannot re-validate old tokens, but you can use the same SD cards to create new tokens.
After using the token created for authentication, do not leave it inserted in the SD card slot, ensure that the token is removed from the slot and stored in a safe location. If the token is left in the slot, there is a danger of theft or a third party using it for authentication and operating the user’s computer (resulting in extraction, modification or deletion of data) when the user is not at their desk.

**Supervisor Password**

If you set a Supervisor Password, some functions might be restricted when a user logs on with the User Password. To set a Supervisor Password, execute the file TOSPU.EXE. The file is located at:

C:\Program Files\Toshiba\Windows Utilities\SVPWTool\TOSPU.EXE

This utility lets you do the following:

- Register, delete or change the Supervisor Password.
- Create or invalidate a Supervisor Password token.

This function in the TOSHIBA Password Utility lets you invalidate only supervisor tokens or all tokens, including user and supervisor tokens.

- Specify restrictions for general users.

**Starting the computer by password**

If you have already registered a password, there are three ways to start the computer:

- Insert an SD card token before you turn on the computer. The computer will start normally, without displaying a password prompt.
- Swipe your fingerprint on the sensor if you have already registered the fingerprint with the Fingerprint utility and enabled Fingerprint System Boot Authentication. If you would not like to swipe your finger or cannot authenticate the fingerprint for some reasons, push the BkSp key to skip the fingerprint authentication screen. You can try to swipe the fingerprint up to five times. If you failed fingerprint authentication more than five times, you must enter the password manually to start the computer.
- Enter the password manually.

The password is necessary only if the computer was shut down in boot mode. It is not needed in Standby Mode.

To enter a password manually, follow these steps:

1. Turn on the power as described in Chapter 3, *Getting Started*. The following message will appear in the LCD:

   Password=

2. Enter the Password.
3. Press Enter.
Power-up modes

The computer has the following power-up modes:

- **Boot**: Computer shuts down without saving data. Always save your work before you turn the computer off in boot mode.
- **Hibernation**: Data in memory is saved to the hard disk drive.
- **Standby**: Data is maintained in the computer’s memory.

Refer also to the sections Turning on the power and Turning off the power in Chapter 3, Getting Started.

Windows utilities

You can configure various settings associated with both Standby Mode and Hibernation Mode within TOSHIBA Power Saver.

Hot keys

You can use hot keys **Fn + F3** to enter Standby Mode and **Fn + F4** to enter Hibernation. Refer to Chapter 5, The Keyboard for details.

Panel power on/off

You can set up your computer so that power turns off automatically when you close the display panel. When you open the panel, power will be turned on in Standby Mode or Hibernation Mode but not in boot mode.

If the panel power off function is enabled and you manually shut down Windows, do not close the computer’s LCD display panel until the shut down process has been completed.

System Auto Off

This feature turns the system off automatically if it is not used for a set duration. The system shuts down in Standby Mode or Hibernation Mode in Windows.
HW Setup

This chapter explains how to use TOSHIBA HW Setup program to configure your computer, and provides information on setting up the Execute-Disable Bit Capability and TPM.

Accessing HW Setup

To run HW Setup, click start, click Control Panel, click Printers and Other Hardware and select TOSHIBA HWSetup.

HW Setup window

The HW Setup window contains the following tabs: General, Display, Boot Priority, Keyboard, CPU, LAN, Device Config, Parallel/Printer and USB. There are also three buttons: OK, Cancel and Apply.

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Accepts your changes and closes the HW Setup window.</td>
</tr>
<tr>
<td>Cancel</td>
<td>Closes the window without accepting your changes.</td>
</tr>
<tr>
<td>Apply</td>
<td>Accepts all your changes without closing the HW Setup window.</td>
</tr>
</tbody>
</table>
**General**

This window displays the BIOS version and contains two buttons: **Default** and **About**.

<table>
<thead>
<tr>
<th>Default</th>
<th>Return all HW Setup values to the factory settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>About</td>
<td>Display the HW Setup version.</td>
</tr>
</tbody>
</table>

**Setup**

This field displays **BIOS Version** and date.

**Display**

This tab lets you customize your computer’s display settings for either the internal LCD screen or for an external monitor.

**Power On Display**

Lets you select the display to be used when the computer is booted. (This setting is only available on Standard VGA mode and is not available on Windows Desktop properties).

<table>
<thead>
<tr>
<th>Auto-Selected</th>
<th>Selects an external monitor if one is connected. Otherwise, it selects the internal LCD (Default).</th>
</tr>
</thead>
<tbody>
<tr>
<td>LCD + Analog RGB</td>
<td>Selects both the internal LCD and external monitor for simultaneous display.</td>
</tr>
</tbody>
</table>

*If the connected external monitor does not support the computer’s current video mode, selecting the LCD + Analog RGB mode will not display any image on the external monitor.*

*When Windows starts up, the screen will be displayed on the external monitor if it was connected when the notebook was previously switched off and is still connected when the computer is switched on. Otherwise, the screen will be displayed on the internal LCD.*
**Boot Priority**

### Boot Priority Options

This option sets the priority for booting the computer. Select from the following settings:

<table>
<thead>
<tr>
<th>Setting 1</th>
<th>Setting 2</th>
<th>Setting 3</th>
<th>Setting 4</th>
<th>Setting 5</th>
<th>Setting 6</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDD</td>
<td>FDD</td>
<td>CD-ROM</td>
<td>LAN</td>
<td>HDD</td>
<td>CD-ROM</td>
</tr>
<tr>
<td>CD-ROM</td>
<td>LAN</td>
<td>HDD</td>
<td>FDD</td>
<td>CD-ROM</td>
<td>HDD</td>
</tr>
<tr>
<td>LAN</td>
<td>FDD</td>
<td>CD-ROM</td>
<td>HDD</td>
<td>CD-ROM</td>
<td>RDD</td>
</tr>
<tr>
<td>FDD</td>
<td>CD-ROM</td>
<td>LAN</td>
<td>HDD</td>
<td>CD-ROM</td>
<td>RDD</td>
</tr>
<tr>
<td>CD-ROM</td>
<td>LAN</td>
<td>HDD</td>
<td>FDD</td>
<td>CD-ROM</td>
<td>RDD</td>
</tr>
</tbody>
</table>

The computer looks for bootable files in the following order: HDD, floppy disk drive*¹, CD-ROM*² and LAN (Default).

**You can override the settings and manually select a boot device by pressing one of the following keys while the computer is booting:**

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>U</td>
<td>Selects the USB floppy disk drive.</td>
</tr>
<tr>
<td>N</td>
<td>Selects the network.</td>
</tr>
<tr>
<td>1</td>
<td>Selects the primary HDD.</td>
</tr>
<tr>
<td>2</td>
<td>Selects the secondary HDD.</td>
</tr>
<tr>
<td>C</td>
<td>Selects the CD-ROM*².</td>
</tr>
<tr>
<td>M</td>
<td>Selects the USB Memory.</td>
</tr>
</tbody>
</table>

*¹ The floppy disk drive will be used to start the computer when there is a bootable disk contained in the external drive. If SD memory is installed as well, the external floppy disk drive will be checked first, followed by the SD memory device itself.

*² The optical media drive will be used to start the computer when there is a bootable disk contained in the drive.
To change the boot drive, follow the steps below.

1. Hold down **F12** and boot the computer.

2. The following menu will be displayed with the following icons:
   - Built-in HDD
   - Ultra Slim Bay HDD
   - CD-ROM
   - FDD
   (or SD memory card)
   - Network (LAN)
   - USB Memory boot

   ![Icons](image)

   **A bar will appear only under the selected device.**

3. Use the left/right cursor keys to highlight the boot device you want and press **Enter**.

   - If only a Supervisor Password has been set, the following should be noted:
     - The boot device menu will appear when the “Able to run HW Setup” option has been configured.
     - The boot device menu will not appear when the “Unable to run HW Setup” option has been configured.

   - If both a Supervisor Password and a User Password are set, the following should be noted:
     - The boot device menu will appear when you use either the Supervisor Password or the User Password to start the computer, and the “Able to run HW Setup” option has been configured.
     - The boot device menu will not appear when you use the User Password to start the computer and the “Unable to run HW Setup” option has been configured.
     - The boot device menu will appear when you use the Supervisor Password to start the computer, even if the “Unable to run HW Setup” option has been configured.

   The boot device selection methods described above will not change the boot priority settings that have been configured in HW Setup. In addition, if you press a key other than one of those listed, or if the selected device is not installed, the system will continue to boot according to the current and available settings in HW Setup.
**HDD Priority Options**

If more than one HDD is installed in the computer, this option lets you set the priority for HDD detection. If the first detected HDD has a boot command, the system will boot from the HDD.

<table>
<thead>
<tr>
<th>HDD Priority</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Built-in HDD -&gt; 2nd HDD -&gt; USB</td>
<td>The priority is set as built-in HDD -&gt; 2nd HDD -&gt; USB.</td>
</tr>
<tr>
<td>2nd HDD -&gt; Built-in HDD -&gt; USB</td>
<td>The priority is set as 2nd HDD -&gt; built-in HDD -&gt; USB.</td>
</tr>
<tr>
<td>Built-in HDD -&gt; USB -&gt; 2nd HDD</td>
<td>The priority is set as built-in HDD -&gt; USB -&gt; 2nd HDD.</td>
</tr>
<tr>
<td>2nd HDD -&gt; USB -&gt; Built-in HDD</td>
<td>The priority is set as 2nd HDD -&gt; USB -&gt; built-in HDD.</td>
</tr>
<tr>
<td>USB -&gt; Built-in HDD -&gt; 2nd HDD</td>
<td>The priority is set as USB -&gt; built-in HDD -&gt; 2nd HDD.</td>
</tr>
<tr>
<td>USB -&gt; 2nd HDD -&gt; Built-in HDD</td>
<td>The priority is set as USB -&gt; 2nd HDD -&gt; built-in HDD.</td>
</tr>
</tbody>
</table>

- If a boot command is not found on the first detected HDD, the system will not boot from the other HDD. It will search the next device in the boot priority for a boot command.
- Some modules may not be displayed.

**USB Memory BIOS Support Type**

Set the type of the USB memory as a startup device.

<table>
<thead>
<tr>
<th>USB Memory Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| HDD | Set the type of the USB memory to be equivalent to the HDD (Default).
  * Based on the [HDD] order in the [Boot Priority Options] item. The order with respect to the other HDD can be set in the [HDD Priority Options] item. |
| FDD | Set the type of the USB memory to be equivalent to the FDD.
  * Based on the [FDD] order in the [Boot Priority Options] item. |
**Keyboard**

*External Keyboard Fn key*

Use this option to set a key combination on an external keyboard to emulate the Fn key on the computer’s internal keyboard. Setting an Fn key equivalent will let you use Hot keys by pressing the set combination instead of the Fn key (PS/2 keyboard only).

<table>
<thead>
<tr>
<th>Fn Equivalent</th>
<th>Disabled</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left Ctrl + Left Alt</td>
<td>No Fn key equivalent (Default).</td>
</tr>
<tr>
<td>Right Ctrl + Right Alt</td>
<td></td>
</tr>
<tr>
<td>Left Alt + Left Shift</td>
<td></td>
</tr>
<tr>
<td>Right Alt + Right Shift</td>
<td></td>
</tr>
<tr>
<td>Left Alt + Caps Lock</td>
<td></td>
</tr>
</tbody>
</table>

*Wake-up on Keyboard*

When this feature is enabled and the computer is in Standby Mode, you can turn on the computer by pressing any key. It is effective only for the internal keyboard and only when the computer is in Standby Mode.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabled</td>
<td>Enables the Wake-up on Keyboard function.</td>
</tr>
<tr>
<td>Disabled</td>
<td>Disables the Wake-up on Keyboard function (Default).</td>
</tr>
</tbody>
</table>
**CPU**

This function lets you set the CPU operating mode.

*This option is displayed only for models with a Pentium-M® processor.*

**Dynamic CPU Frequency Mode**

This option lets you choose from the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| Dynamically Switchable | CPU power consumption and clock speed automatic switching function is enabled.  
                          | When the computer is in use, CPU operation is automatically switched when necessary (Default). |
| Always High      | CPU power consumption and clock speed automatic switching function is disabled.  
                          | The CPU always runs at its fastest speed.                                      |
| Always Low       | CPU power consumption and clock speed automatic switching function is disabled.  
                          | The CPU always runs at low power consumption and low speed.                    |

**LAN**

**Wake-up on LAN**

This feature lets the computer’s power be turned on when it receives a wake-up signal from the LAN.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabled</td>
<td>Enables Wake-up on LAN.</td>
</tr>
<tr>
<td>Disabled</td>
<td>Disables Wake-up on LAN (Default).</td>
</tr>
</tbody>
</table>

*Do not install or remove an optional memory module while Wake-up on LAN is enabled.*

*The Wake-up on LAN function consumes power even when the system is off. Leave the AC adaptor connected while using this feature.*

**Built-in LAN**

This feature enables or disables the Built-in LAN.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabled</td>
<td>Enables Built-in LAN functions (Default).</td>
</tr>
<tr>
<td>Disabled</td>
<td>Disables Built-in LAN functions.</td>
</tr>
</tbody>
</table>
**Device Config**

**Device Configuration**
This option lets you set the device configuration.

<table>
<thead>
<tr>
<th>All Devices</th>
<th>BIOS sets all devices.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setup by OS</td>
<td>Operating system sets devices that it can control (Default).</td>
</tr>
</tbody>
</table>

**Parallel/Printer**

Some models are equipped with Parallel/Printer tab. This tab lets you set the Parallel Port Mode. Use the Windows Device Manager to make settings for the Parallel port.

**Parallel Port Mode**
The options in this tab are **ECP** and **Standard Bi-directional**.

<table>
<thead>
<tr>
<th>ECP</th>
<th>Sets the port type to Extended Capabilities Port (ECP). For most printers, the port should be set to <strong>ECP</strong> (Default).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Bi-directional</td>
<td>This setting should be used with some other parallel devices.</td>
</tr>
</tbody>
</table>

**USB**

**USB KB/Mouse Legacy Emulation**
Use this option to enable or disable USB keyboard/mouse legacy emulation. If your operating system does not support USB, you can still use a USB mouse and keyboard by setting the **USB KB/Mouse Legacy Emulation** item to **Enabled**.

<table>
<thead>
<tr>
<th>Enabled</th>
<th>Enables the USB KB/Mouse Legacy Emulation function (Default).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disabled</td>
<td>Disables the USB KB/Mouse Legacy Emulation function.</td>
</tr>
</tbody>
</table>

**USB-FDD Legacy Emulation**
Use this option to enable or disable USB floppy disk drive legacy emulation. If your operating system does not support USB, you can still use a USB floppy disk drive by setting the **USB-FDD Legacy Emulation** item to **Enabled**.

<table>
<thead>
<tr>
<th>Enabled</th>
<th>Enables the USB floppy disk drive legacy emulation function (Default).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disabled</td>
<td>Disables the USB floppy disk drive legacy emulation function.</td>
</tr>
</tbody>
</table>
Configuring the Execute-Disable Bit Capability and TPM

The configurations for the Execute-Disable Bit Capability and TPM are carried out in the BIOS setup program.

Notes before using the BIOS Setup

- In most cases, changes to the system’s configuration should be made within Windows by using applications such as TOSHIBA HW Setup, TOSHIBA Password Utility, TOSHIBA Power Saver, Windows Device Manager and so forth. If you make changes to the configuration through the BIOS setup program, please be aware that the configuration set through the Windows applications will take priority.
- Changes to the settings within the BIOS setup program will not be erased even if the power supply is switched off and the main battery removed. However, if the built-in Real Time Clock (RTC) battery runs out of power, most of the settings will revert back to their default values. However, please note that the following items will not be affected in this instance:
  - Password
  - HDD Password
  - Security controller

Starting and Ending the BIOS Setup Program

Starting the BIOS Setup Program

1. Switch on your computer while pressing the Esc key.
   If “Password =” is displayed, enter either the Supervisor Password, if one is set, or the User Password and press the Enter key.
   Please refer to Chapter 6, the TOSHIBA Password Utility, for details about the User Password.
   The “Check system. Then press [F1] key.” message is displayed.
2. Press the F1 key.
   The BIOS setup program will start up.

Select either the Execute-Disable Bit Capability or settings in the security controller to make changes. Please refer to the operating instructions displayed in the settings screen.
**Ending the BIOS Setup Program**

Save the changes and end the program.

1. Press the **End** Key.
   The "Are you sure? (Y/N) The changes you made will cause the system to reboot." message is displayed.
2. Press the **Y** key.
   The configured settings are saved and the BIOS setup program ends. The computer may reboot depending on the settings that were modified.

**Ending the BIOS Setup Program Halfway**

The configuration settings can be terminated halfway without saving any of the changes made.

1. Press the **Esc** key.
   The "Exit without saving? (Y/N)" message is displayed.
2. Press the **Y** key.
   The BIOS setup program will end.

**Execute-Disable Bit Capability**

This setting, which is displayed on the first page of the setup screen, configures the Execute-Disable Bit function of the CPU. This function is specific to Intel processors and, when activated, helps to reduce security threats to the computer by preventing certain classes of malicious "buffer overflow" attacks when combined with a supporting operating system such as Windows XP.

<table>
<thead>
<tr>
<th>Available</th>
<th>Makes the processor’s Execute-Disable Bit Capability available for use.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Available</td>
<td>Disables the processor’s Execute-Disable Bit Capability so that it is not available for use. (Default).</td>
</tr>
</tbody>
</table>

*System configuration changes, other than changes to this setting, should be made within Windows by using applications such as TOSHIBA HW Setup, TOSHIBA Password Utility, TOSHIBA Power Saver, Windows Device Manager and so forth.*
Security controller

The security controller settings are available in SYSTEM SETUP (2/2).

TPM

This setting enables or disables the security controller known as TPM (Trusted Platform Module).

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enabled</td>
<td>Enables the TPM.</td>
</tr>
<tr>
<td>Disabled</td>
<td>Disables the TPM (Default).</td>
</tr>
</tbody>
</table>

Clear TPM Owner

This setting is used to erase the data in TPM when disposing of the computer or when the owner of the computer changes, etc. Once this operation is carried out, the TPM configuration settings are erased, such that the encrypted data can no longer be decrypted and the files can no longer be read. Please backup or delete the data as necessary before carrying out this operation.

The operating procedure is as follows:

1. Move the cursor to the Clear TPM Owner setting and press the Space key or BkSp key.
2. A message is displayed. Press the Y, E, S, and Enter keys and the TPM information is erased.
3. The TPM setting changes from being displayed as Enable to Disabled, and the setting is no longer displayed.

- System configuration changes other than changes to this setting should be made in Windows using TOSHIBA HW Setup, TOSHIBA Password Utility, TOSHIBA Power Saver, Device Manager, etc.
- When using TPM, please install the Infineon TPM Installation Guide from the TOSHIBA Application Installer. Please ensure that the user reads the Infineon TPM Installation Guide as it contains usage information and notes on using TPM.

Diagnostic Mode

Set whether the BIOS Setup Diagnostic test is enabled.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disabled (Default)</td>
<td>The Diagnostic test is disabled.</td>
</tr>
<tr>
<td>Enabled</td>
<td>The Diagnostic test is enabled.</td>
</tr>
</tbody>
</table>
Optional Devices

Optional devices can expand the computer’s capabilities and its versatility. This chapter describes connection or installation of the following devices, which are available from your TOSHIBA dealer:

**Cards/memory**
- PC card
- ExpressCard
- SD card
- Memory expansion

**Power devices**
- Battery pack
- AC adaptor
- Battery charger

**Peripheral devices**
- Hard disk drive pack
- Ultra Slim Bay HDD adaptor
- USB floppy disk drive
- External monitor
- i.LINK (IEEE1394)
- Advanced Port Replicator III
- Parallel printer
- Serial interface devices

**Other**
- Security lock
**PC card**

The computer is equipped with a PC card slot that can accommodate a Type II card. Any PC card that meets industry standards (manufactured by TOSHIBA or other vendor) can be installed. The slot supports 16-bit PC cards, including PC card 16’s multifunction card and CardBus PC cards. CardBus supports the new standard of 32-bit PC cards. The bus provides superior performance for the greater demands of multimedia data transmission.

*PC cards can sometimes become hot during PC operation. Before you remove a PC card always wait for it to cool. You could get burned removing a hot PC card.*

**Inserting a PC card**

Windows hot-install feature lets you insert PC cards while the computer’s power is on.

*Do not insert a PC card while the computer is in standby or Hibernation Mode. Some cards might not work properly.*

To insert a PC card, follow the steps below:

1. Insert a PC card in the PC card slot.
2. Press gently to ensure a firm connection.
3. After inserting the PC card, refer to the PC card’s documentation and check the configuration in Windows to make sure it is appropriate for your PC card.
Removing a PC card

To remove the PC card, follow the steps below.
1. Open the **Safely Remove Hardware** icon on the Task Bar.
2. Point to **PC card** and click.
3. Press the PC card eject button to extend it.
4. Press the extended eject button to pop the card out slightly.
5. Grasp the PC card and draw it out.

*If the PC card is not inserted all the way, the eject button may not cause it to pop out sufficiently to allows it to be grasped. Be sure to push the PC card firmly into the computer and slide the eject button again.*

ExpressCard

The computer is equipped with an ExpressCard slot. Any ExpressCard that meets industry standards (manufactured by TOSHIBA or other vendor) can be installed. The slot supports hot plug connection and utilizes the PCI-Express interface that supports the reading and writing of data at a theoretical maximum rate of 2.5 Gbps.

Inserting an ExpressCard

Windows’ hot-install feature lets you insert an ExpressCard while the computer’s power is on.

*Do not insert an ExpressCard while the computer is in standby or Hibernation Mode. Some cards might not work properly.*

*The ExpressCard slot is the top slot of the two located on the left of the computer. Please confirm this with the following illustration, avoid confusion with the PC card slot and insert the card carefully.*
To insert an ExpressCard, follow the steps below:
1. Insert an ExpressCard in the ExpressCard card slot.
2. Press gently to ensure a firm connection.

3. After inserting the ExpressCard, refer to the ExpressCard’s documentation and check the configuration in Windows to make sure it is appropriate for your ExpressCard.

**Removing an ExpressCard**

To remove the ExpressCard, follow the steps below.
1. Open the **Safely Remove Hardware** icon on the Task Bar.
2. Point to **ExpressCard** and click.
3. Press the ExpressCard eject button to extend it.

*If the ExpressCard is not inserted all the way, the eject button may not pop out. Be sure to push the ExpressCard firmly and press the eject button again.*

4. Press the extended eject button to pop the card out slightly.
5. Grasp the ExpressCard and draw it out.
SD card

The computer is equipped with an SD card slot that can accommodate Secure Digital flash memory cards with various memory capacities. SD cards let you easily transfer data from devices, such as digital cameras and Personal Digital Assistants that use SD card flash-memory. The cards have a high level of security and copy protection features. The slot cannot accommodate Multi Media cards.

Keep foreign objects out of the SD card slot. A pin or similar object can damage the computer’s circuitry.

SD memory cards comply with SDMI (Secure Digital Music Initiative), which is a technology adopted to prevent unlawful copy or playback of digital music. For this reason, you cannot copy or playback protected material on another computer or other device. You may not use the reproduction of any copyrighted material except for your personal enjoyment.

Formatting an SD memory card

SD memory cards are sold already formatted in conformity to specific standards. If you format the SD card again, be sure to format it with the TOSHIBA SD memory card format utility, not with the format commands provided within Windows.

In order to run TOSHIBA SD memory card format, click start, point to All Programs, point to TOSHIBA, point to Utilities and click SD memory card Format.

The TOSHIBA SD memory card format utility does not format the protected area of the SD memory card. Should you need to format all areas of the memory card, including the protected area, you will need to obtain an appropriate application that applies the copy protection system.

Inserting an SD card

To insert an SD card, follow the steps below.
1. Insert an SD card in the SD card slot.
2. Press gently to ensure a firm connection.
Removing an SD card

To remove an SD card, follow the steps below.
1. Open the **Safely Remove Hardware** icon on the Task Bar.
2. Point to **SD card** and click.
3. Push in the SD card and release it to pop the card out slightly.
4. Grasp the SD card and remove it.

**Make sure the SD card is oriented properly before you insert it.**
**Do not turn the computer off or switch to Standby Mode or Hibernate Mode while files are being copied - doing so may cause data to be lost.**

**Make sure the SD card indicator is out before you remove the SD card or turn off the computer's power. If you remove the card or turn off the power while the computer is accessing the card you may lose data or damage the card.**
**Do not remove an SD card while the computer is in Standby or Hibernation Mode. The computer could become unstable or data in the SD card could be lost.**
SD card care

- Do not write to an SD card if the battery power is low. Low power could affect writing accuracy.
- Do not remove an SD card while read/write is in progress.
- The SD card is designed so that it can be inserted only one way. Do not try to force the SD card into the SD card slot.
- Do not leave an SD card partially inserted in the slot. Press the SD card until you hear it click into place.
- Do not twist or bend SD cards.
- Do not expose SD cards to liquids or store in humid areas or lay media close to containers of liquid.
- After using an SD card, return it to its case.
- Do not touch the metal part or expose it to liquids or let it get dirty.

Creation of a boot disk

Within the TOSHIBA SD Memory Boot Utility, a bootable SD memory card can be created if required. Refer to the Utilities section in Chapter 1, Introduction, for details.

Memory expansion

You can install additional memory in the computer’s memory module slot to increase the amount of RAM. This section describes how to install and remove a memory module.

- Place a mat beneath the computer to prevent scratching or damaging the computer’s lid when installing/replacing the memory module. Avoid mats made of materials that generate static electricity.
- When you install or remove a memory module, ensure that you do not touch any other internal areas of the computer.
If you install a memory module that is not compatible with the computer, a beep will sound when you turn on the power. If the incompatible module is installed in slot A, there will be a long beep (1 second) followed by one short beep (0.5 seconds), while if the incompatible module is in slot B, there will be a long beep followed by two short beeps. In the event both modules are incompatible, there will be a long beep followed by one short beep, a pause, and then a long beep followed by two short beeps. In all instances you should shut down the computer and remove the incompatible module(s).

**Installing memory module**

There are slots for two memory modules, one over the other. The procedures are the same for installing either module.

1. Set the computer to boot mode and turn the computer’s power off. Make sure the Power indicator is off. Refer to the Turning off the power section in Chapter 3, Getting Started.
2. Remove AC adaptor and all cables connected to the computer.
3. Turn the computer upside down and remove the battery pack. Refer to Replacing the battery pack section in Chapter 6, Power and Power-Up Modes, for details.
4. Loosen the screw securing the memory module cover. The screw is attached to the cover to prevent it from being lost.

Use only memory modules approved by TOSHIBA.

Do not try to install or remove a memory module under the following conditions as you can damage the computer and/or the module, and you risk losing data:

a. The computer is turned on.
b. The computer was shut down using either Standby Mode or Hibernation Mode.
c. Wake-up on LAN is enabled.

Be careful not to let screws or other foreign matter fall into the computer. It could cause malfunction or electric shock.

Expansion memory is a precision electronic component that may be fatally damaged by static electricity. Since the human body can carry static electricity, it is important that you discharge yourself before touching or installing any expansion memory modules. To discharge your body’s static electricity, simply touch any metal close to you with bare hands.

Use a 0 point Phillips screwdriver to remove and fasten the screws. Use of an incorrect screwdriver can damage the screw heads.
5. Slide your fingernail or a thin object under the cover and lift it off.

6. Align the notch of the memory module with that of the memory slot and gently insert the module into the slot at about a 45 degree angle before pressing it down until the latches on either side snap into place.

---

Align the grooves along the edges of the memory module with the locking tabs on the connector and insert the module into the connector firmly. If you find it difficult to install the memory module, gently prize the locking tabs outwards using the tip of your finger. Ensure that you hold the memory module along its left and right hand edges - the edges with the grooves in.

- Never allow metal objects, such as screws, staples and paper clips, to enter the PC or keyboard. Foreign metal objects can create a short circuit, which can cause PC damage and fire, possibly resulting in serious injury.
- Do not touch the connectors on the memory module or on the computer. Debris on the connectors may cause memory access problems.
7. Seat the memory module cover and secure it with one screw.  

*Be sure that the cover is closed firmly.*

8. Install the battery pack. Refer to *Replacing the battery pack* section in Chapter 6, *Power and Power-Up Modes*, for details.

9. Turn your computer over.

10. Turn the power on and make sure the added memory is recognized. Click **start**, click **Control Panel**, click **Performance and Maintenance** and select the **System** icon. Open **System Properties** window and click **General** tab.

### Removing memory module

To remove the memory module, make sure the computer is in boot mode then:

1. Set the computer to boot mode and turn the computer’s power off. Make sure the **Power** indicator is off.

2. Remove AC adaptor and all cables connected to the computer.

3. Turn the computer upside down and remove the battery pack. Refer to *Replacing the battery pack* section in Chapter 6, *Power and Power-Up Modes*, for details.

4. Loosen the screw securing the memory module cover. The screw is attached to the cover to prevent it from being lost.

5. Slide your fingernail or a thin object under the cover and lift it off.

6. Push the latches to the outside to release the module. A spring will force one end of the module up.
7. Grasp the module by the sides and pull it out.

- If you use the computer for a long time, the memory modules and the circuits located close to the memory modules will become hot. In this case, let them cool to room temperature before you replace them.
- Do not touch the connectors on the memory module or on the computer. Debris on the connectors may cause memory access problems.

8. Seat the memory module cover and secure it with one screw.

Be sure that the cover is closed firmly.

9. Install the battery pack. Refer to Replacing the battery pack section in Chapter 6, Power and Power-Up Modes, for details.

10. Turn your computer over.

**Battery pack**

You can increase the portability of the computer with additional battery packs. If you’re away from an AC power source and your battery runs low, you can replace it with a freshly charged battery. Refer to Chapter 6, Power and Power-Up Modes.

**AC adaptor**

If you frequently transport the computer between different sites such as your home and office, purchasing an AC adaptor for each location will reduce the weight and bulk of your carrying load.
Optional Devices

Battery charger

The battery charger provides a convenient way to charge battery packs without requiring the use of your computer. The battery charger holds up to two battery packs (lithium ion).

Hard disk drive pack

An extra hard disk drive expands the flexibility of your system and lets you carry your data without carrying the computer.

Use a 0 point Phillips screwdriver for the task described here.

Removing the hard disk drive pack

To remove the hard disk drive pack, follow the steps below.

1. Set the computer to boot mode and turn off the power.
2. Disconnect the AC adaptor and all external cables connected to the computer.
3. Turn the computer upside down and remove the battery pack. Refer to Replacing the battery pack section in Chapter 6, Power and Power-Up Modes, for details.
4. Loosen one screw securing the hard disk drive cover.
5. A small row of ridges marks latches securing the cover. Press on these ridges until you hear a click.
6. Press on the arrows and lift the cover up and out to remove it.

7. Reposition the hard disk drive until it is vertical.
8. With the hard disk drive in a vertical position, lift it straight up and away from the connector.

### Installing the hard disk drive pack

To install the hard disk drive pack, follow the steps below.

1. Move the connector until it is vertical.
2. Hold the hard disk drive vertically with its label on the left.
3. Connect the hard disk drive to the connector.

Ensure that the hard disk drive is connected to the connector in a vertical position. If the hard disk drive is slanted and connected to the connector, it might damage the connector.

4. With the connector connected, lower the hard disk drive down to the storage position.

5. Seat the cover and press down until the latches click into place.
6. Secure the cover with a screw.
7. Turn your computer over.
Ultra Slim Bay HDD adaptor

You can increase your computer’s data storage capacity by installing an additional 80.0 billion bytes (74.53 GB) and 100.0 billion bytes (93.16 GB) hard disk drive in the Ultra Slim Bay.

To install a hard disk drive in the Ultra Slim Bay HDD adaptor follow the steps below.

1. Slide the lock to the unlock position and open the lid.

![Opening the lid](image)

2. Insert the hard disk drive in the Ultra Slim Bay HDD adaptor and push forward to ensure a firm connection.

![Inserting the hard disk drive](image)
3. Close the lid and slid the lock to the lock position.

For details on inserting the Ultra Slim Bay HDD adaptor in the computer’s Ultra Slim Bay slot, refer to Chapter 4, *Operating Basics*.

**USB floppy disk drive**

The USB floppy disk drive module can be connected to the USB port. For details on connecting the USB floppy disk drive module, refer to Chapter 4, *Operating Basics*.

**External monitor**

An external analog monitor can be connected to the external monitor port on the computer. The computer supports XGA and Super XGA video modes. To connect a monitor, follow the steps below.

1. Turn the computer’s power off.
2. Connect the monitor cable to the external monitor port and tighten the screws on the left and right hand side.
3. Turn the monitor’s power on.
4. Turn the computer’s power on.

When you turn on the power, the computer automatically recognizes the monitor and determines whether it is color or monochrome.

However, the Windows Desktop appears on a display device that you used last time to shut down your computer, if the display device exists when you turn on the power.

To change the display settings, press \textbf{Fn} + \textbf{F5}. If you disconnect the external monitor before you turn the computer’s power off, be sure to press \textbf{Fn} + \textbf{F5} to switch to the internal display. Refer to Chapter 5, \textit{The Keyboard}, for details on using hot keys to change the display setting.

**TV**

You can connect a television set to the Video out jack on the computer. Follow the steps below.

**Using the TOSHIBA Assist button**

1. Connect the TV adaptor cable’s S-Video plug to the Video-out jack on the computer.

2. Connect the TV adaptor cable’s S-Video plug to the Video-out jack on the TV.

3. Press the TOSHIBA Assist button.

You can use the hot keys \textbf{Fn} + \textbf{F5} to change the display device. Refer to Chapter 5, \textit{The Keyboard}.

To use “TV OUT” function by “TOSHIBA Assist button”, it is necessary to change the settings of “TOSHIBA Assist button” in advance.

To open “TOSHIBA Controls” properties, click \texttt{start}, click \texttt{Control Panel}, click \texttt{Printers and Other Hardware}, select “TOSHIBA Controls”, and set “TV OUT” to “TOSHIBA Assist button” on “Buttons” tab.
Changing the resolution

If you want to change the resolution, follow the steps below.
1. Open Display properties and select the Settings tab.
2. Select Advanced.
3. Select the Adapter tab, then select List all modes.
4. Select a resolution from the menu.

Displaying movies on a TV or CRT

This section describes how to set up your system to display movies simultaneously on your computer’s internal LCD and on an external TV or CRT monitor. Follow the steps below.
1. Open the Control Panel and click Appearance and Themes.
2. Click Display.
3. Select the Settings tab and click Advanced button.
4. Select the GeForce Go 6600 tab.
   a. Click the GeForce Go 6600 button.
   b. Click Full Screen Video in the small menu.
   c. From the Full screen device drop down menu, select Primary display or Secondary display to enable movie display on an external TV or CRT monitor.
      Primary Device: Movies will be displayed full screen on the computer’s internal LCD and in a window on the TV or CRT monitor.
      Secondary Device: Movies will be displayed full screen on the TV or CRT monitor and in a window on the computer’s internal LCD.
      Disable: Movies will not be displayed on a TV or CRT monitor.
Optional Devices

- Click OK.
- Click OK in the Display Properties screen.

i.LINK (IEEE1394)

i.LINK (IEEE1394) is used for high-speed data transfer for a range of compatible devices such as
- Digital video cameras
- Hard disk drives
- MO drives
- Writable optical disc drives

Precautions

- Make a back-up of your data before transferring it to the computer. There is a possibility that the original data will be damaged. There is a particular risk that some frames will be deleted in the case of digital video transfer. TOSHIBA assumes no liability for such loss of data.
- Do not transfer data in areas where static electricity is easily generated or in areas subjected to electronic noise. Data can be destroyed.
- If you are transferring data through an IEEE1394 hub, do not connect or disconnect other devices from the hub during data transfer. There is a likelihood that data will be damaged. Connect all devices to the hub before you turn on the computer’s power.
- You may not use any copyrighted video or music data copied from a video camera except for your personal enjoyment.
- If you connect/disconnect an i.LINK device to/from another i.LINK device that is currently exchanging data with the computer, data frames might be dropped.
- Make sure data transfer has ended or turn off the computer, before you:
  - Connect/disconnect an i.LINK device to/from the computer.
  - Connect/disconnect an i.LINK device to/from another i.LINK device that is connected to the computer.

Even if the above does not set up, there are some as which the movies is simultaneously displayed depending on the type of the movies.

i.LINK uses a four-pin connector, which does not carry any electric current. External devices will need their own power supply to operate.
Optional Devices

Connecting

1. Make sure the connectors are properly aligned and plug the i.LINK (IEEE1394) cable into the computer.

2. Plug the other end of the cable into the device.

   Note the following when you use i.LINK:
   ■ You may need to install drivers for your i.LINK devices.
   ■ Not all i.LINK devices have been tested. Therefore, compatibility with all i.LINK devices cannot be guaranteed.
   ■ Some devices might not support standby or automatic off functions.
   ■ Do not connect or disconnect an i.LINK device while it is using an application or when the computer is automatically shutting it down to save power. Data might be destroyed.

Disconnecting

1. Open the **Safely Remove Hardware** icon on the Task Bar.
2. Point to **i.LINK (IEEE1394) device** and click.
3. Disconnect the cable from the computer then from the i.LINK device.

Refer also to the documentation that came with your i.LINK device.
Advanced Port Replicator III

In addition to the ports available on the computer, the Advanced Port Replicator III provides serial port and separate ports for PS/2 mouse and PS/2 keyboard. The Advanced Port Replicator connects directly to the docking interface on the underside of the computer. The AC adaptor connects the Advanced Port Replicator to a power source.

The computer must be configured properly before connecting to a LAN. Logging onto a LAN using the computer’s default settings could cause a malfunction in LAN operation. Check with your LAN administrator regarding set-up procedures.

You must connect the AC adaptor before you connect to an Advanced Port Replicator III.

When an Advanced Port Replicator III is connected to the computer, you cannot use the following computer’s ports: Modem jack, LAN jack, DC IN 15V jack, External monitor port, i.LINK (IEEE 1394) port, Video-out jack.

The following ports and accessories are available on the Advanced Port Replicator III.

- RJ45 LAN jack
- RJ11 Modem jack
- External monitor port
- Parallel port
- Serial port
- PS/2 mouse port
- PS/2 keyboard port
- DC IN 15V jack
- Security lock slot
- Audio line-in, line-out jacks
- Universal Serial Bus 2.0 port (four)
- i.LINK (IEEE 1394) port
- DVI port

DVI Monitors

When you connect a TECRA S3 computer to an optional Advanced Port Replicator III, the Digital Visual Interface (DVI) supports the following DVI-D type monitors:

- EIZO FlexScan L675
- EIZO FlexScan L985EX
- SHARP LL-T1620-B
- SHARP LL-T2020-H
Connecting the Advanced Port Replicator III

A triangle symbol on top of your computer indicates the docking position. Position the computer so that this symbol is aligned with the triangle symbol on the Advanced Port Replicator III to dock it.

Parallel printer

You can connect any standard Centronics-compatible parallel printer to your computer. All you need is an IBM PC™ parallel printer cable. You can purchase one at most computer stores.

The cable’s connectors are designed so that it is impossible for you to connect them incorrectly. To connect a printer, follow these steps:

1. Turn off the computer’s power.
2. Connect the cable into the computer’s parallel port.
3. Tighten the screws that fasten the connector to the computer’s parallel port.
4. Connect the other connector of the cable into the printer’s parallel connector.
5. Fasten the connector to the printer with the clips on the parallel port.
6. Turn on the printer’s power.
7. Turn on the computer’s power.
8. Start the HW Setup program. Refer to Chapter 7, *HW Setup*.
9. Select the **Parallel/Printer** tab from the *TOSHIBA HW Setup* window.
10. Set the **Parallel Port Mode** and press **OK**.
11. Choose Reboot for the change to take effect.
12. Select the printer in Windows Add Print Wizard. To access the **Add Print Wizard** utility, click **start**, click **Control Panel**, click **Printers and Other Hardware** and select the **Add Printer**.

**Do not connect a DVI monitor to the DVI port and a VGA monitor to the external monitor port at the same time.**
Serial interface devices

The serial port can be used to connect to RS-232C compatible devices. RS-232C compatible devices include the following:

- Modem
- Mouse

To connect a serial device, follow the steps below.
1. Turn the computer's power off.
2. Connect the serial connector to the serial port and tighten the screws on the left and right hand side.

Security lock

Security locks enable you to anchor your computer and optional Advanced Port Replicator III to a desk or other heavy object to help prevent unauthorized removal of the computer or Advanced Port Replicator III. The computer has a security lock slot on the left side. Attach one end of a cable to a desk and the other end to the security lock slot.
1. Turn the computer so the left side faces you.
2. Align the holes for the security lock and attach the lock.
Troubleshooting

TOSHIBA designed the computer for durability. However, should problems occur, following the procedures in this chapter can help to determine the cause.

All readers should become familiar with this chapter. Knowing what might go wrong can help prevent problems from occurring.

Problem solving process

Resolving problems will be much easier if you observe the following guidelines:

■ Stop immediately when you recognize a problem exists. Further action may result in data loss or damage. You may destroy valuable problem-related information that can help solve the problem.

■ Observe what is happening. Write down what the system is doing and what actions you performed immediately before the problem occurred. If you have a printer attached, print a copy of the screen using **PrtSc**.

The questions and procedures offered in this chapter are meant as a guide, they are not definitive problem solving techniques. Many problems can be solved simply, but a few may require help from your dealer. If you find you need to consult your dealer or others, be prepared to describe the problem in as much detail as possible.
Preliminary checklist

Consider the simplest solution first. The items in this checklist are easy to fix and yet can cause what appears to be a serious problem.

- Make sure you turn on all peripheral devices before you turn on the computer. This includes your printer and any other external device you are using.
- Before you attach an external device, turn the computer off. When you turn the computer back on it recognizes the new device.
- Make sure all options are set properly in the setup program.
- Check all cables. Are they correctly and firmly attached? Loose cables can cause signal errors.
- Inspect all connecting cables for loose wires and all connectors for loose pins.
- Check that your floppy disk or CD/DVD-ROM is correctly inserted and that the floppy disk’s write protect tab is correctly set.

Make notes of your observations and keep them in a permanent error log. This will help you describe your problems to your dealer. If a problem recurs, the log will help you identify the problem faster.

Analyzing the problem

Sometimes the system gives clues that can help you identify why it is malfunctioning. Keep the following questions in mind:

- Which part of the system is not operating properly: keyboard, floppy disk drives, hard disk drive, optical media drive, display. Each device produces different symptoms.
- Is the operating system configuration set properly? Check the configuration options.
- What appears on the display screen? Does it display any messages or random characters? If you have a printer attached, print a copy of the screen using PrtSc. Look up the messages in the software and operating system documentation. Check that all connecting cables are correctly and firmly attached. Loose cables can cause erroneous or intermittent signals.
- Do any indicators light? Which ones? What color are they? Do they stay on or blink? Write down what you see.
- Do you hear any beeps? How many? Are they long or short? Are they high pitched or low? Is the computer making any unusual noises? Write down what you hear.

Record your observations so you can describe them to your dealer.
This section discusses problems caused by your computer’s hardware or attached peripherals. Basic problems may occur in the following areas:

- System start-up
- Self test
- Power
- Password
- Keyboard
- Internal LCD display panel
- Hard disk drive
- DVD-ROM&CD-R/RW drive
- DVD Super Multi drive
- USB floppy disk drive
- SD card
- PC card
- ExpressCard
- Infrared port
- Dual Pointing Device
- Fingerprint Sensor
- USB device
- Memory expansion
- Sound system
- External monitor
- i.LINK (IEEE1394) device
- Modem
- LAN
- Wireless LAN
- Bluetooth
- Printer
- TV output signal
System start-up

When the computer does not start properly, check the following items:
- Self Test
- Power Sources
- Power-on Password

Self test

When the computer starts up, the self test will be run automatically, and the following will be displayed:

In Touch with Tomorrow
TOSHIBA

This message remains on the screen for a few seconds.

If the self test is successful, the computer tries to load the operating system, depending on how the Boot Priority is set in the TOSHIBA HW Setup program.

If any of the following conditions are present, the self test failed:
- The computer stops and does not proceed to display information or messages except the TOSHIBA logo.
- Random characters appear on the screen, and the system does not function normally.
- The screen displays an error message.

Turn off the computer and check all cable connections. If the test fails again, contact your dealer.

Power

When the computer is not plugged into an AC outlet, the battery pack is the primary power source. However, your computer has a number of other power resources, including an intelligent power supply and a Real Time Clock battery. These resources are interrelated and any one could affect apparent power problems. This section provides checklists for AC power and the battery. If you cannot resolve a problem after following them, the cause could lie with another power resource. In such case, contact your dealer.
## Overheating power down

If the computer’s internal temperature becomes too high, the computer will automatically enter Hibernation or Standby Mode and shut down.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer shuts down and <strong>DC IN</strong> indicator blinks orange</td>
<td>Leave the computer off until the <strong>DC IN</strong> indicator stops blinking.</td>
</tr>
</tbody>
</table>

**It is recommended to leave the computer off until the interior reaches room temperature even though the **DC IN** indicator stops blinking.**

- If the computer has reached room temperature and still does not start, or if it starts but shuts down quickly contact your dealer.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer shuts down and its <strong>DC IN</strong> indicator is flashing green</td>
<td>Indicates a problem with the heat dispersal system. Please contact your dealer.</td>
</tr>
</tbody>
</table>

## AC power

If you have trouble turning on the computer with the AC adaptor connected, check the **DC IN** indicator. Refer to Chapter 6, *Power and Power-Up Modes* for more information.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>AC adaptor doesn’t power the computer (<strong>DC IN</strong> indicator does not glow green)</td>
<td>Check the connections. Make sure the cord is firmly connected to the computer and a power outlet.</td>
</tr>
</tbody>
</table>

- Check the condition of the cord and terminals. If the cord is frayed or damaged, replace it. If the terminals are soiled, wipe them with cotton or a clean cloth.

- If the AC adaptor still does not power the computer, contact your dealer. |
**Battery**

If you suspect a problem with the battery, check the **DC IN** indicator as well as the **Battery** indicator. For information on indicators and battery operation see Chapter 6, *Power and Power-Up Modes*.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery doesn’t power the computer</td>
<td>The battery may be discharged. Connect the AC adaptor to charge the battery.</td>
</tr>
<tr>
<td>Battery doesn’t charge when the AC adaptor is attached (Battery or Ultra Slim Bay indicator does not glow orange.)</td>
<td>If the battery is completely discharged, it will not begin charging immediately. Wait a few minutes. If the battery still does not charge, make sure the outlet of the AC adaptor is supplying power. Test it by plugging in an appliance. Check whether the battery is hot or cold to the touch. If the battery is too hot or too cold, it will not charge properly. Let it reach room temperature. Unplug the AC adaptor and remove the battery to make sure the terminals are clean. If necessary wipe them with a soft dry cloth dipped in alcohol. Connect the AC adaptor and replace the battery. Make sure it is securely seated. Check the Battery indicator. If it does not glow, let the computer charge the battery for at least 20 minutes. If the Battery indicator glows after 20 minutes, let the battery continue to charge at least another 20 minutes before turning on the computer. If the indicator still does not glow, the battery may be at the end of its operating life. Replace it. If you do not think the battery is at the end of its operating life, see your dealer.</td>
</tr>
<tr>
<td>Battery doesn’t power the computer as long as expected</td>
<td>If you frequently recharge a partially charged battery, the battery might not charge to its full potential. Fully discharge the battery, then try to charge it again. Check the power consumption settings in TOSHIBA Power Saver utility. Consider using a power saving mode.</td>
</tr>
</tbody>
</table>
### Real Time Clock

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>The following message is displayed on the LCD screen:</td>
<td>The charge in the RTC battery has run out - you will need to set the date and time in the BIOS setup using the following steps:</td>
</tr>
<tr>
<td><strong>RTC battery is low or CMOS checksum is inconsistent.</strong></td>
<td>1. Press F1 key. BIOS setup will boot up.</td>
</tr>
<tr>
<td><strong>Press [F1] key to set Date/Time.</strong></td>
<td>2. Set the date in <strong>System Date</strong>.</td>
</tr>
<tr>
<td></td>
<td>3. Set the time in <strong>System Time</strong>.</td>
</tr>
<tr>
<td></td>
<td>4. Press <strong>End</strong> key. Confirmation message will appear.</td>
</tr>
<tr>
<td></td>
<td>5. Press <strong>Y</strong> key. BIOS setup will terminate and the computer will be rebooted.</td>
</tr>
</tbody>
</table>

### Password

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cannot enter password</strong></td>
<td>Refer to the <strong>TOSHIBA Password Utility</strong> section in Chapter 6, <strong>Power and Power-Up Modes</strong>.</td>
</tr>
</tbody>
</table>

### Keyboard

Keyboard problems can be caused by your setup configuration. For more information refer to Chapter 5, *The Keyboard*.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Some letter keys produce numbers</strong></td>
<td>Check that the numeric keypad overlay is not selected. Press <strong>Fn + F10</strong> and try typing again.</td>
</tr>
<tr>
<td><strong>Output to screen is garbled</strong></td>
<td>Make sure the software you are using is not remapping the keyboard. Remapping involves reassigning the meaning of each key. See your software’s documentation.</td>
</tr>
<tr>
<td></td>
<td>If you are still unable to use the keyboard, consult your dealer.</td>
</tr>
</tbody>
</table>
# Internal LCD display panel

Apparent LCD problems may be related to the computer’s setup. Refer to Chapter 7, *HW Setup*, for more information.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>No display</td>
<td>Press hotkeys <strong>Fn + F5</strong> to change the display priority, to make sure it is not set for an external monitor.</td>
</tr>
<tr>
<td>Markings appear on the LCD screen.</td>
<td>The marks may have come from contact with the keyboard, Touch Pad or AccuPoint. Try wiping the LCD screen gently with a clean dry cloth. If markings remain, use a good quality LCD screen cleaner, taking care to ensure you let the LCD screen dry before closing it.</td>
</tr>
<tr>
<td>Problems above remain unresolved or other problems occur</td>
<td>Refer to your software’s documentation to determine if the software is causing the difficulty. Run the diagnostic test. Contact your dealer if the problems continue.</td>
</tr>
</tbody>
</table>

## Hard disk drive

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer does not boot from hard disk drive</td>
<td>Check if a floppy disk is in the floppy disk drive or a CD-ROM is in the optical media drive. Remove any floppy disk and/or CD-ROM and check the Boot priority. Refer to the <em>Boot Priority</em> section in Chapter 7, <em>HW Setup</em>. There may be a problem with your operating system files. Refer to your operating system documentation.</td>
</tr>
<tr>
<td>Slow performance</td>
<td>Your files may be fragmented. Run Disk Defragmenter to check the condition of your files and disk. Refer to your operating system’s documentation or online HELP for information on running the Disk Defragmenter. As a last resort, reformat the hard disk. Then, reload the operating system and other files. If problems persist, contact your dealer.</td>
</tr>
</tbody>
</table>
# DVD-ROM&CD-R/RW drive

For more information, refer to Chapter 4, *Operating Basics*.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
</table>
| You cannot access a CD/DVD in the drive | Make sure the drive’s disc tray is securely closed. Press gently until it clicks into place.  
Check whether the drive power is on. If the power is off, click on the optical media drive icon in the task tray and turn on the power.  
Open the disc tray and make sure the CD/DVD is properly seated. It should lie flat with the label facing up.  
A foreign object in the disc tray could block laser light from reading the CD/DVD. Make sure there is no obstruction. Remove any foreign object.  
Check whether the CD/DVD is dirty. If it is, wipe it with a clean cloth dipped in water or a neutral cleaner. Refer to the *Media care* section in Chapter 4 for details on cleaning. |
| Some CD/DVDs run correctly, but others do not | The software or hardware configuration may be causing a problem. Make sure the hardware configuration matches your software’s needs. Check the CD/DVD’s documentation.  
Check the type of CD/DVD you are using. The drive supports:  
**DVD-ROM:** DVD-ROM, DVD-Video  
**CD-ROM:** CD-DA, CD-Text, Photo CD™ (single/multi-session), CD-ROM Mode 1, Mode 2, CD-ROM XA Mode 2 (Form1, Form2), Enhanced CD (CD-EXTRA), Addressing Method 2  
**Recordable CD:** CD-R, CD-RW  
Check the region code on the DVD. It must match that on the DVD-ROM&CD-R/RW drive. Region codes are listed in the *Optical media drives* section in Chapter 2, *The Grand Tour*. |
### Troubleshooting

**DVD Super Multi drive**

| Cannot write correctly | If you have trouble writing, make sure you are observing the following precautions:  
- Use only media recommended by TOSHIBA.  
- Do not use the mouse or keyboard during writing.  
- Use only the software supplied with the computer for recording.  
- Do not run or start other software during writing.  
- Do not jar the computer during writing.  
- Do not connect/disconnect external devices or install/remove internal cards during writing.  
If problems persist, contact your dealer. |

</tbody>
</table>
| The mouse pointer moves too fast or too slow | Try changing the speed setting in the mouse control utility.  
1. Click **start**, click **Control Panel**, click **Printers and Other Hardware** and select **Mouse** icon.  
2. Click the **Pointer Options** tab.  
3. Set the speed as required and click **OK**. |
### USB mouse

#### Problem
Double-tapping (Touch Pad) or double-clicking (AccuPoint) does not work

#### Procedure
Try changing the double-click speed setting in the mouse control utility.

1. Click **start**, click **Control Panel**, click **Printers and Other Hardware** and select **Mouse** icon.
2. Click the **Buttons** tab.
3. Set the double-click speed as required and click **OK**.

If problems persist, contact your dealer.

#### Problem
On-screen pointer does not respond to mouse operation

#### Procedure
The system might be busy. If the pointer is shaped as an hourglass, wait for it to resume its normal shape and try again to move it.

Make sure the mouse is properly connected to the USB port.

#### Problem
Double-clicking does not work

#### Procedure
Try changing the double-click speed setting in the mouse control utility.

1. Click **start**, click **Control Panel**, click **Printers and Other Hardware** and select **Mouse** icon.
2. Click the **Buttons** tab.
3. Set the double-click speed as required and click **OK**.

#### Problem
The mouse pointer moves too fast or too slow

#### Procedure
Try changing the speed setting in the mouse control utility.

1. Click **start**, click **Control Panel**, click **Printers and Other Hardware** and select **Mouse** icon.
2. Click the **Pointer Options** tab.
3. Set the speed as required and click **OK**.

#### Problem
The mouse pointer moves erratically

The mouse might be dirty. Refer to your mouse documentation for instructions on cleaning.

If problems persist, contact your dealer.
## Fingerprint Sensor

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>

## Troubleshooting

### i.LINK (IEEE1394) device

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>i.LINK device does not function</td>
<td>Make sure the cable is securely connected to the computer and to the device.</td>
</tr>
<tr>
<td></td>
<td>Make sure the device’s power is turned on.</td>
</tr>
<tr>
<td></td>
<td>Reinstall the drivers. Open the Windows Control Panel and double-click the <strong>Add Hardware</strong> icon. Follow the on-screen directions.</td>
</tr>
<tr>
<td></td>
<td>Restart Windows. If problems persist, contact your dealer.</td>
</tr>
</tbody>
</table>

### Modem

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication software can’t initialize modem</td>
<td>Make sure the computer’s internal modem settings are correct. Refer to <strong>Phone and Modem</strong> Properties in the Control Panel.</td>
</tr>
<tr>
<td>You can hear a dial tone but can’t make a call</td>
<td>If the call is going through a PBX machine, make sure the communication application’s tone dial detection feature is disabled.</td>
</tr>
<tr>
<td></td>
<td>You can also use the ATX command.</td>
</tr>
<tr>
<td>You place a call, but a connection can’t be made</td>
<td>Make sure the settings are correct in your communications application.</td>
</tr>
<tr>
<td>After making a call you can’t hear a ring</td>
<td>Make sure the tone or pulse selection in your communications application is set correctly. You can also use the ATD command.</td>
</tr>
<tr>
<td>Communication is cut off unexpectedly</td>
<td>The computer will automatically cut off communication when connection with the carrier is not successful for a set time interval. Try lengthening this time interval.</td>
</tr>
<tr>
<td>A <strong>CONNECT</strong> display is quickly replaced by <strong>NO CARRIER</strong></td>
<td>Check the error control setting in your communications application. You can also use the AT\N command.</td>
</tr>
<tr>
<td>Character display becomes garbled during a communication session</td>
<td>In data transmission, make sure the parity bit and stop bit settings correspond with those of the remote computer. Check the flow control and communication protocol.</td>
</tr>
</tbody>
</table>
**Troubleshooting**

- **LAN**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>You cannot receive an incoming call</td>
<td>Check the rings before auto answer setting in your communications application. You can also use the ATS0 command. If problems persist, contact your dealer.</td>
</tr>
<tr>
<td>Cannot access LAN</td>
<td>Check for a firm cable connection between the LAN jack and the LAN hub.</td>
</tr>
<tr>
<td>Wake-up on LAN does not work</td>
<td>Make sure the AC adaptor is connected. The Wake-up on LAN function consumes power even when the system is off. If problems persist, consult your LAN administrator.</td>
</tr>
</tbody>
</table>

- **Wireless LAN**

If the following procedures do not restore LAN access, consult your LAN administrator. For more information on wireless communication, refer to Chapter 4, *Operating Basics*.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot access Wireless LAN</td>
<td>Make sure the computer’s wireless communication switch is set to on. If problems persist, contact your LAN administrator.</td>
</tr>
</tbody>
</table>
Bluetooth

For more information on wireless communication, refer to Chapter 4, Operating Basics.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot access Bluetooth device</td>
<td>Make sure the computer’s wireless communication switch is set to on. Make sure the Bluetooth Manager is running and the power to the Bluetooth device is turned on. Make sure no optional Bluetooth PC card and Bluetooth SD card are installed in the computer. The built-in Bluetooth function and an optional Bluetooth PC card cannot operate simultaneously. If problems persist, contact your dealer.</td>
</tr>
</tbody>
</table>

Printer

Refer also to the Parallel printer sections in Chapter 8, Optional Devices, and to the troubleshooting and other relevant sections in your printer and software documentation.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printer does not turn on</td>
<td>Check that the printer is connected to an electric outlet. Make sure the outlet is supplying power by plugging in an appliance.</td>
</tr>
<tr>
<td>Computer/printer do not communicate</td>
<td>Make sure the printer is turned on and is online (ready to use). Inspect the cable connecting the printer to the computer for damage. Make sure it is securely connected. A parallel printer connects to the parallel port. Make sure the port is configured correctly. Make sure your software is configured to recognize the printer. Check your printer and software documentation.</td>
</tr>
<tr>
<td>Printer error</td>
<td>Check your printer documentation. If problems persist, contact your dealer.</td>
</tr>
</tbody>
</table>
## TV output signal

<table>
<thead>
<tr>
<th>Problem</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display on TV is poor</td>
<td>Make sure the TV type is correct for your area: NTSC (US, JAPAN), PAL (Europe).</td>
</tr>
</tbody>
</table>
| No display           | Try adjusting the contrast and brightness controls on the external monitor.  
                        | Press hotkeys **Fn + F5** to change the display.  
                        | Refer to Chapter 5, *The Keyboard*.  
                        | If problems persist, contact your dealer. |

*If you turn the computer off into Standby Mode while the display is on TV, the computer will select either the internal LCD or an external computer CRT as the display device the next time is switched on.*

## Disposing of PC and PC batteries

- Discard this PC in accordance with ordinances or rules of local regulations. For further information, contact your local government.
- This PC contains rechargeable batteries. After repeated use, the batteries will finally lose their ability to hold a charge and you will need to replace them. Under certain applicable laws and regulation, it may be illegal to dispose of old batteries by placing them in the trash.
- Please be kind to our shared environment. Check with your local government authority for details regarding where to recycle old batteries or how to dispose of them properly. This product contains mercury. Disposal of this material may be regulated due to environmental considerations. For disposal, reuse or recycling information, please contact your local government.
- If your hard disk or other storage media contains sensitive data, you should be aware that standard deletion procedures do not remove data from the media. These standard deletion procedures include:
  - Selecting Delete for a target file
  - Putting files in the Recycle Bin and emptying the Recycle Bin
  - Reformatting the media
  - Reinstalling an operating system from the recovery CD-ROM

The procedures above delete only the initial part of the data used for file management. This makes the file invisible to the operating system, but the data can still be read by specialized utilities. If you dispose of the PC, please delete all the data on its hard disk drive. Doing so prevents unauthorized use of such data. To ensure your data is not used for unauthorized purposes, you can:
  - Physically destroy the hard disk drive
  - Use a proven specialized utility to overwrite all data
  - Take the hard disk drive to a professional deletion service

All data deletion costs will be borne by you.
TOSHIBA support

If you require any additional help using your computer or if you are having problems operating the computer, you may need to contact TOSHIBA for additional technical assistance.

Before you call

Some problems you experience may be related to software or the operating system, it is important to investigate other sources of assistance first. Before contacting TOSHIBA, try the following:

- Review troubleshooting sections in the documentation for software and peripheral devices.
- If a problem occurs when you are running software applications, consult the software documentation for troubleshooting suggestions. Call the software company’s technical support for assistance.
- Consult the dealer you purchased your computer and/or software from. They are your best sources for current information and support.

Where to write

If you are still unable to solve the problem and suspect that it is hardware related, write to TOSHIBA at the location listed in the accompanying warranty booklet or visit www.toshiba-europe.com on the Internet.
Specifications

This appendix summarizes the computer’s technical specifications.

Physical Dimensions

| Weight (typical) | 2.85 kilograms, configured with: 15”SXGA+, 256MB RAM, 40GB HDD, DVD-ROM&CD-R/RW drive, modem, LAN, Wireless LAN, 6cell battery pack. Weight will vary with other configurations. Above weights are measured at specific criteria. They are not guaranteed as the maximum weight of the actual product. |
| Size | 338 (+6) (w) × 280 (+6) (d) × 29.9/38.6 (h) millimeters (not including parts that extend beyond the main body) |

- Data: ITU-T-Rec (Former CCITT) / V.21/V.22/V.22bis/V.32/V.32bis/V.34/V.90
- Bell: 103/212A
- Fax: ITU-T-Rec (Former CCITT) / V.17/V.29/V.27ter/V.21 ch2

#### Communication speed

- Data transmission and reception:
  300/1200/2400/4800/7200/9600/12000/14400/16800/19200/21600/24000/26400/28800/31200/33600 bps
  Data reception only with V.90:
  Fax:
  2400/4800/7200/9600/12000/14400 bps

#### Transmitting level

-10 dBm

#### Receiving level

-10 to -40 dBm

#### Input/output impedance

600 ohms ±30%

#### Error correcting

- MNP class 4 and ITU-T V.42

#### Data compression

- MNP class 5 and ITU-T V.42bis

#### Power supply

+3.3V (supplied by computer)
Display Controller and Modes

Display controller

The display controller interprets software commands into hardware commands that turn particular parts on the screen on or off.

The display controller supports VGA, SVGA and XGA modes on the internal LCD display panel.

Two models are available:

- 15.0" XGA, 1024 horizontal × 768 vertical pixels
- 15.0" SXGA+, 1400 horizontal × 1050 vertical pixels

Because of the LCD’s increased resolution, lines may appear broken in DOS mode.

A high-resolution external monitor connected to the computer can display up to 2048 horizontal and 1536 vertical pixels at up to 16M colors.

The display controller also controls the video mode, which uses industry standard rules to govern the screen resolution and the maximum number of colors that can be displayed on screen.

Software written for a given video mode will run on any computer that supports the mode.

The computer’s display controller supports all XGA and SXGA modes, the most widely used industry standards.
Video modes

The computer supports video modes defined in the tables below. If your application offers a selection of mode numbers that do not match the numbers on the table, select a mode based on mode type, resolution, character matrix, number of colors and refresh rates. Also, if your software supports both graphics and text modes, the screen display may appear to operate faster using a text mode.

Table 1: Video modes (VGA)

PowerMizer

The PowerMizer function is only available in nVIDIA models.

PowerMizer is a graphics processor installed on this computer. The performance of PowerMizer can be configured in three ways. To define the performance, select the menu options shown below:

Display Properties -> Settings -> Advanced -> GeForce Go 6600 tab -> GeForce Go 6600 button -> nView Display Settings -> PowerMizer

The graphics processor offers three options, Maximum Power Savings, Balanced and Maximum Performance, in each of the AC power mode and battery power mode.

</tbody>
</table>
Radio Characteristics

Radio Characteristics of Wireless LAN Cards may vary according to:
- Country/region where the product was purchased
- Type of product

Wireless communication is often subject to local radio regulations. Although Wireless LAN wireless networking products have been designed for operation in the license-free 2.4GHz and 5GHz band, local radio regulations may impose a number of limitations to the use of wireless communication equipment.

Refer to the sheet “Information to the User” for regulatory information that may apply in your country/region.

<table>
<thead>
<tr>
<th>R-F Frequency</th>
<th>Band 5GHz (5150-5850 MHz) (Revision A)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Band 2.4GHz (2400-2483.5 MHz) (Revision B, G)</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>OFDM-BPSK, OFDM-QPSK, OFDM-16QAM, OFDM-64QAM (Revision A, G)</td>
</tr>
</tbody>
</table>

The range of the wireless signal is related to the transmit rate of the wireless communication. Communications at lower transmit range may travel larger distances.
- The range of your wireless devices can be affected when the antennas are placed near metal surfaces and solid high-density materials.
- Range is also impacted due to “obstacles” in the signal path of the radio that may either absorb or reflect the radio signal.
Supported Frequency Sub-bands

Subject to the radio regulations that apply in the countries/regions, your Wireless LAN card may support a different set of 5 GHz/2.4 GHz channels. Consult your Authorized Wireless LAN or TOSHIBA Sales office for information about the radio regulations that apply in the countries/regions.

Wireless IEEE 802.11 Channels Sets (Revision B and G)

<table>

| 11  | 2462  |
| 12  | **2467***2 |
| 13  | **2472***2 |

*1 Factory-set default channels  
*2 Dependent on the country/region where the WiFi card was purchased

When installing Wireless LAN cards, the channel configuration is managed as follows:

- For wireless clients that operate in a Wireless LAN Infrastructure, the Wireless LAN card will automatically start operation at the channel identified by the Wireless LAN Access Point. When roaming between different access points the station can dynamically switch to another channel if required.

- For Wireless LAN cards installed in wireless clients that operating in a peer-to-peer mode, the card will use the default channel 10.

- In a Wireless LAN Access Point, the Wireless LAN card will use the factory-set default channel (printed in bold), unless the LAN Administrator selected a different channel when configuring the Wireless LAN Access Point device.

</table>
TOSHIBA RAID provides the RAID function. 2 hard disk drives can be used to construct a RAID configuration (RAID-1: mirroring).

When using RAID-1 (mirroring), the data is stored on 2 HDDs so that even if there are problems with one of the hard disk drive, the other hard disk drive can be used to recover the data.

Please refer to the TOSHIBA RAID help for details.

- By changing this setting you are reconfiguring your hard disk. In which case, all data and programs in the hard disk, including the operating system (e.g. Windows), will be erased.
  - If you have not yet done so, launch the Recovery Disc Creator and create the recover discs now.
  - If you have data on the hard drive that you wish to keep, make a backup of that data onto external media (such as a CD) now.
  - You will not be able to create recovery discs, nor access any data from the hard disk after reconfiguring your hard disk.

- A power-on password can help restrict access to your data.
  - It can also help restrict access to System Setup, where some of your computer’s configuration settings are kept.
  - If you do not have a power-on password set, someone with access to it could (i) set a power-on password, locking you out of your own computer, or (ii) change your configuration settings, which could result in data loss.
  - We recommend that you consider using a power-on password.
Windows Manual Setup

Use the following procedures when manually setting up Windows.

Before Setting Up Windows

Before setting up Windows, create the TOSHIBA RAID Driver Disk and configure the BIOS setup program.

Creating the TOSHIBA RAID Driver Disk

1. Connect the USB floppy disk drive and insert a floppy disk.
2. From the start menu, select TOSHIBA Application Installer and click the Next button.
3. Select the TOSHIBA RAID Driver and click the Install button.
4. Specify the folder and click the Unzip button. The driver file will be copied to the floppy disk.

Configuring the BIOS Setup Program

In the RAID ARRAY setting of the BIOS setup program, set the built-in HDD to 1RAID-0.
It is not necessary to change the setting if it has already been set as such.
Refer to the Starting, Modifying and Ending the BIOS Setup Program, in this chapter.

Windows Setup Procedure

1. Insert the Windows Setup CD-ROM into the CD-ROM drive and boot up.
   The Windows Setup program will start.
2. When the message “Press F6 if you need to install a third party SCSI or RAID driver” appears on the screen, press the F6 key.
3. When the message “Setup will load support for the following mass storage device(s):” appears on the screen, press the S key and install the TOSHIBA RAID Driver using the TOSHIBA RAID Driver Disk that was created.
4. Follow the onscreen instructions to continue Windows setup.

Please use only hard disk drives supported by the computer. Correct operations cannot be guaranteed if other hard disk drives are used.

The following types of applications might not work correctly:

- Applications that directly access the hardware and read/write to the hard disk drive.
- Using an OS such as Linux to run applications that read/write to the hard disk drive.
Boot menu
When 2 hard disk drives are connected, it is possible to select which hard disk drive to boot from in the boot menu. However, if a RAID configuration is used, the 2 hard disk drives are recognized as 1 drive and there is no change in the boot configuration no matter which hard disk drive is selected.

When using a RAID-1 (mirroring) configuration, the additional hard disk drive’s capacity must be equal to or more than the capacity of the existing hard disk drive.

The hard disk drives used in the RAID configuration should not be removed and used in other computers.

When using the RAID-1 (mirroring) configuration, the OS recognizes the lesser capacity of the 2 hard disk drives. For example, if a 60 GB and an 80 GB hard disk drive are used in the mirroring configuration, the OS will recognize the capacity as a 60 GB hard disk drive.

The additional 20 GB capacity (over the 60 GB hard disk drive) of the 80 GB hard disk drive cannot be used.

If a hard disk drive had been replaced, execute the rebuild command and rebuild the RAID-1 (mirroring) configuration.

Implementing the media checking schedule
Media checks should be carried out regularly to ensure even more stable operation of the RAID configuration and to make it easier for maintenance and repair measures to be carried out in case of hard disk drive failures.

For RAID-1 with data redundancy, if a hard disk drive failure occurs, the hard disk drive is replaced and its data reconstructed from the other hard disk drive which did not fail.

If there are bad blocks, etc., in the hard disk drive that did not fail, it is possible that portion of data might not be recovered and system down might occur.

An effective way to ensure that such situations do not happen is to carry out RAID-1 media checks regularly.

The TOSHIBA RAID utility is set as default to carry out media checks every month on the third Wednesday from noon.
Starting, Modifying and Ending the BIOS Setup Program

Starting the BIOS Setup Program

1. Switch on your computer while pressing the Esc key. If Password = is displayed, enter the User Password and press the Enter key. Please refer to Chapter 6, the TOSHIBA Password Utility, for details about the User Password. The “Check system. Then press [F1] key.” message is displayed.
2. Press the F1 key. The BIOS setup program will start up.

Modifying the BIOS

1. Select the RAID ARRAY setting in the SYSTEM SETUP (3/3) screen.

Please refer to the operating instructions displayed in the settings screen.

2. The settings are explained as follows. Modify the settings as necessary.

<table>
<thead>
<tr>
<th>Current State</th>
<th>Shows the current hard disk status.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create State</td>
<td>Modify the hard disk configuration. (Modifications are made with this setting).</td>
</tr>
<tr>
<td>Built-in HDD</td>
<td>Status of the connected hard disk.</td>
</tr>
<tr>
<td>Second HDD</td>
<td>Status of the second hard disk.</td>
</tr>
</tbody>
</table>

Configuration status and settings

<table>
<thead>
<tr>
<th>JBOD</th>
<th>No RAID settings. Windows cannot be installed in this disk except for using recovery CD/DVD.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1RAID-0</td>
<td>Including RAID settings. Windows can be installed in this disk.</td>
</tr>
<tr>
<td>2RAID-0</td>
<td>Set to RAID-0 for 2 hard disks. This cannot be set in this computer (Current State Only).</td>
</tr>
<tr>
<td>RAID-1</td>
<td>Set to RAID-1 for 2 hard disks (Current State Only).</td>
</tr>
<tr>
<td>UNKNOWN</td>
<td>A RAID status except for the above status and settings (Current State Only).</td>
</tr>
<tr>
<td>No Drive</td>
<td>No hard disks connected (Current State Only).</td>
</tr>
</tbody>
</table>
3. The Execute Creation message is displayed once the configuration is modified. Move the cursor to the appropriate location and press the space bar to continue.

4. The following message will be displayed. Follow the instructions and press the keys in the order of 1, 2, 3, 4, [Enter].

   Warning: If you change the RAID array, you will need to install the OS again. Are you sure? All data on the HDD(s) will be destroyed. Do you really want to do this? If “Yes”, please type the key string which is written in the manual.

**Ending the BIOS Setup Program**

Save the changes and end the program.

1. Press the **End** key.
   The “Are you sure? (Y/N) The changes you made will cause the system to reboot.” message is displayed.

2. Press the **Y** key.
   The configured settings are saved and the BIOS setup program ends. The computer may reboot depending on the settings that were modified.
Bluetooth™ Cards from TOSHIBA are designed to be interoperable with any product with Bluetooth wireless technology that is based on Frequency Hopping Spread Spectrum (FHSS) radio technology, and is compliant to:

- Bluetooth Specification Ver2.0+EDR, as defined and approved by The Bluetooth Special Interest Group.
- Logo certification with Bluetooth wireless technology as defined by The Bluetooth Special interest Group.
Bluetooth wireless technology is a new innovative technology, and TOSHIBA has not confirmed compatibility of its Bluetooth™ products with all computers and/or equipment using Bluetooth wireless technology other than TOSHIBA portable computers. Always use Bluetooth™ Cards from TOSHIBA in order to enable wireless networks over two or more (up to a total of seven) TOSHIBA portable computers using these cards. Please contact TOSHIBA PC product support on Web site http://www.toshiba-europe.com/computers/tnt/bluetooth.htm in Europe or http://www.pc.support.global.toshiba.com in the United States for more information.

When you use Bluetooth™ Cards from TOSHIBA close to 2.4 GHz Wireless LAN devices, Bluetooth transmissions might slow down or cause errors. If you detect certain interference while you use Bluetooth™ Cards from TOSHIBA, always change the frequency, move your computer to the area outside of the interference range of 2.4 GHz Wireless LAN devices (40 meters/43.74 yards or more) or stop transmitting from your computer. Please contact TOSHIBA PC product support on Web site http://www.toshiba-europe.com/computers/tnt/bluetooth.htm in Europe or http://www.pc.support.global.toshiba.com in the United States for more information.

Bluetooth™ and Wireless LAN devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth™ and Wireless LAN devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection. If you should experience any such problem, immediately turn off either one of your Bluetooth™ or Wireless LAN. Please contact TOSHIBA PC product support on web site http://www.toshiba-europe.com/computers/tnt/bluetooth.htm in Europe or http://www.pc.support.global.toshiba.com in the United States for more information.
Bluetooth wireless technology and your Health

The products with Bluetooth wireless technology, like other radio devices, emit radio frequency electromagnetic energy. The level of energy emitted by devices with Bluetooth wireless technology however is far much less than the electromagnetic energy emitted by wireless devices like for example mobile phones.

Because products with Bluetooth wireless technology operate within the guidelines found in radio frequency safety standards and recommendations, TOSHIBA believes Bluetooth wireless technology is safe for use by consumers. These standards and recommendations reflect the consensus of the scientific community and result from deliberations of panels and committees of scientists who continually review and interpret the extensive research literature.

In some situations or environments, the use of Bluetooth wireless technology may be restricted by the proprietor of the building or responsible representatives of the organization. These situations may for example include:

- Using the equipment with Bluetooth wireless technology on board of airplanes, or
- In any other environment where the risk of interference to other devices or services is perceived or identified as harmful.

If you are uncertain of the policy that applies on the use of wireless devices in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use the device with Bluetooth wireless technology prior to turning on the equipment.

Regulatory statements

**General**

This product complies with any mandatory product specification in any country/region where the product is sold. In addition, the product complies with the following.

**European Union (EU) and EFTA**

This equipment complies with the R&TTE directive 1999/5/EC and has been provided with the CE mark accordingly.
Canada - Industry Canada (IC)

This device complies with RSS 210 of Industry Canada.
Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L'utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

The term “IC” before the equipment certification number only signifies that the Industry Canada technical specifications were met.

USA-Federal Communications Commission (FCC)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by tuning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

■ Reorient or relocate the receiving antenna

■ Increase the distance between the equipment and the receiver.

■ Connect the equipment to outlet on a circuit different from that to which the receiver is connected.

■ Consult the dealer or an experienced radio/TV technician for help.

TOSHIBA is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this Bluetooth™ Card from TOSHIBA, or the substitution or attachment of connecting cables and equipment other than specified by TOSHIBA.

The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.
Caution: Exposure to Radio Frequency Radiation

The radiated output power of the Bluetooth™ Card from TOSHIBA is far below the FCC radio frequency exposure limits. Nevertheless, the Bluetooth™ Card from TOSHIBA shall be used in such a manner that the potential for human contact during normal operation is minimized. The antenna(s) used in this device are located at the upper edge of the LCD screen, and this device has been tested as portable device as defined in Section 2.1093 of FCC rules when the LCD screen is rotated 180 degree and covered the keyboard area. In addition, Bluetooth has been tested with Wireless LAN transceiver for co-location requirements. This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter. The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population; consult Safety Code 6, obtainable from Health Canada’s website www.hc-sc.gc.ca/rpb.

Taiwan

Article 14  Unless approved, for any model accredited low power radio frequency electric machinery, any company, trader or user shall not change the frequency, increase the power or change the features and functions of the original design.

Article 17  Any use of low power radio frequency electric machinery shall not affect the aviation safety and interfere with legal communications. In event that any interference is found, the use of such electric machinery shall be stopped immediately, and reusing of such products can be resumed until no interference occurs after improvement.

The legal communications mentioned in the above item refer to radio communications operated in accordance with telecommunication laws and regulations.

Low power radio frequency electric machinery shall resist against interference from legal communications or from industrial, scientific and medical radio emission electric machinery.
Using Bluetooth™ Card from TOSHIBA equipment in Japan

In Japan, the frequency bandwidth of 2,400 - 2,483.5 MHz for second generation low-power data communication systems such as this equipment overlaps that of mobile object identification systems (premises radio station and specified low-power radio station).

1. Sticker

Please put the following sticker on computer incorporating this product.

The frequency bandwidth of this equipment may operate within the same range as industrial devices, scientific devices, medical devices, microwave ovens, licensed radio stations and non-licensed specified low-power radio stations for mobile object identification systems (RFID) used in factory production lines (Other Radio Stations).

1. Before using this equipment, ensure that it does not interfere with any of the equipment listed above.
2. If this equipment causes RF interference to other radio stations, promptly change the frequency being used, change the location of use, or turn off the source of emissions.
3. Contact TOSHIBA Direct PC if you have problems with interference caused by this product to Other Radio Stations.

2. Indication

The indication shown below appears on this equipment.

(1) 2.4 : This equipment uses a frequency of 2.4 GHz.
(2) FH : This equipment uses FH-SS modulation.
(3) 1: The interference range of this equipment is less than 10 m.
(4) This equipment uses a frequency bandwidth from 2,400 MHz to 2,483.5 MHz.

It is impossible to avoid the band of mobile object identification systems.

3. TOSHIBA Direct PC

   Toll Free Tel : 0120-15-1048
   Direct Dial : 03-3457-4850
   FAX : 03-3457-4868
Device Authorization

This device obtains the Technical Conditions Compliance Approval, and it belongs to the device class of radio equipment of low-power data communication system radio station stipulated in the Telecommunications Business Law.

The Name of the radio equipment: EYXF3CS

JAPAN APPROVALS INSTITUTE FOR TELECOMMUNICATIONS EQUIPMENT

Approval Number: D05-0074001

The following restrictions apply:
Do not disassemble or modify the device.
Do not install the embedded wireless module into other device.

Approved Countries/Regions for use (Bluetooth™ wireless technology)

Bluetooth™ Card from TOSHIBA equipment is approved to the radio standard by the countries/regions in the following table.

<table>
<thead>
<tr>
<th>Australia</th>
<th>Austria</th>
<th>Belgium</th>
</tr>
</thead>

Countries/regions that have approved Bluetooth™ Card from TOSHIBA

Do not use this equipment except in the countries/regions in the following table.
AC Power Cord and Connectors

The power cord’s AC input plug must be compatible with the various international AC power outlets and the cord must meet the standards for the country/region in which it is used. All cords must meet the following specifications:

- **Length:** Minimum 2 meters
- **Wire size:** Minimum 0.75 mm²
- **Current rating:** Minimum 2.5 amperes
- **Voltage rating:** 125 or 250 VAC (depending on country/region’s power standards)

### Certification agencies

<table>
<thead>
<tr>
<th>Country</th>
<th>Certification Agency</th>

</thead>
</table>
| **U.S. and Canada** | UL listed and CSA certified  
No. 18 AWG, Type SVT or SPT-2  |
| Australia        | AS                   |
| Japan            | DENANHO              |
| **Europe**       |                      |
| Austria          | OVE                  |
| Belgium          | CEBEC                |
| Denmark          | DEMKO                |
| Finland          | FIMKO                |
| France           | LCIE                 |
| Germany          | VDE                  |
| The Netherlands  | KEMA                 |
| Norway           | NEMKO                |
| Sweden           | SEMKO                |
| Switzerland      | SEV                  |
| United Kingdom   | BSI                  |
In Europe, two conductors power cord must be VDE type, H05VVH2-F or H03VVH2-F and for three conductors power cord must be VDE type, H05VV-F.

For the United States and Canada, two pin plug configuration must be a 2-15P (250V) or 1-15P (125V) and three pin plug configuration must be 6-15P (250V) or 5-15P (125V) as designated in the U.S. National Electrical code handbook and the Canadian Electrical Code Part II.

The following illustrations show the plug shapes for the U.S.A. and Canada, the United Kingdom, Australia and Europe.
If your computer is stolen

Always take care of your computer and try to prevent it from being stolen. You are the owner of a valuable technical device, which may be highly attractive to thieves, so please do not leave it unattended in a public place. To further help protect against theft, security cables can be bought for use with your notebook when it is being used at home or in the office.

Make a note of your computer’s machine type, model number, and serial number, and put it in a safe place. You will find this information on the underside of your notebook. Please also keep the receipt of the computer you purchased.

Should your computer be stolen, however, we’ll help you try to find it. Before contacting TOSHIBA, please prepare the following information which is necessary to uniquely identify your computer:

- In which country was your computer stolen?
- What type of machine do you have?
- What was the model number (PA number)?
- What was the serial number (8 digits)?
- When was it stolen, i.e. date?
- What is your address, phone, and fax number?

To register the theft on paper, please follow these procedures:

- Fill in the TOSHIBA Theft Registration form (or a copy of it) below.
- Attach a copy of your receipt showing where your computer was purchased.
- Either fax or send the receipt and registration form to the address below.

To register the theft online, please follow these procedures:

- In the Computer Systems page, open the Support & Downloads menu and choose the Stolen Units Database option.

Your entries are used to track your computer at our service points.

TOSHIBA Anti-theft Protection Timer

This function sets the limit for the number of days during which you are able to bypass authentication for the BIOS, Hard Disk Drive and Fingerprint. When the time limit is exceeded, you are required to provide the Password or fingerprint authentication for the BIOS and Hard Disk Drive to gain access to the system.

To set permissions and limits for the TOSHIBA Anti-theft Protection Timer please use the TOSHIBA Password Utility.

The settings can only be activated or modified by a user with supervisor authority. If the supervisor password is not set, click on the Set button in Supervisor Password from the supervisor tab in TOSHIBA Password Utility and set the password on the dialog screen that appears.

Then, click on the Set button in TOSHIBA Anti-theft Protection Timer.

Take the following action if the set limit is exceeded.

- If the Supervisor Password is registered but the User Password is not, enter the Supervisor Password to boot up the computer.
- If both the Supervisor Password and the User Password are registered, enter either the Supervisor Password, the User Password or the fingerprint authentication to boot up the computer.

- The limit counts the number of days from the last time Windows is logged on till the next time the computer is booted up. The range can be set from 1 to 28 days.

- Authentication is required in the following cases even if the time limit is not exceeded:
  - The computer’s clock is significantly modified.
  - The RTC battery becomes completely discharged.
  - The computer is not turned off normally.

- If the Supervisor Password is deleted, this function becomes disabled.
Glossary

The terms in this glossary cover topics related to this manual. Alternate naming is included for reference.

Abbreviations

AC: alternating current
AGP: accelerated graphics port
ANSI: American National Standards Institute
APM: advanced power manager
ASCII: American Standard Code for Information Interchange
BIOS: basic input output system
CD-ROM: Compact Disc-Read Only Memory
CD-RW: Compact Disc-ReWritable
CMOS: complementary metal-oxide semiconductor
CPU: central processing unit
CRT: cathode ray tube
DC: direct current
DDC: display data channel
DMA: direct memory access
DOS: disk operating system
DVD: digital versatile disc
DVD-R: Digital Versatile Disc-Recordable
DVD-RAM: Digital Versatile Disc-Random Access Memory
DVD-ROM: Digital Versatile Disc-Read Only Memory
DVD-RW: Digital Versatile Disc-ReWritable
ECP: extended capabilities port
FDD: floppy disk drive
FIR: fast infrared
HDD: hard disk drive
IDE: integrated drive electronics
I/O: input/output
**IrDA**: Infrared Data Association

**IRQ**: interrupt request

**KB**: kilobyte

**LCD**: liquid crystal display

**LED**: light emitting diode

**LSI**: large scale integration

**MB**: megabyte

**MS-DOS**: Microsoft Disk Operating System

**OCR**: optical character recognition (reader)

**PCB**: printed circuit board

**PCI**: peripheral component interconnect

**RAM**: random access memory

**RGB**: red, green, and blue

**ROM**: read only memory

**RTC**: real time clock

**SCSI**: small computer system interface

**SIO**: serial input/output

**SXGA+**: super extended graphics array plus

**TFT**: thin-film transistor

**UART**: universal asynchronous receiver/transmitter

**USB**: Universal Serial Bus

**UXGA**: ultra extended graphics array

**VESA**: Video Electronic Standards Association

**VGA**: video graphics array

**VRT**: voltage reduction technology

**WXGA**: wide extended graphics array

**XGA**: extended graphics array

---

**AccuPoint**: A pointing device integrated into the TOSHIBA computer keyboard.

**adaptor**: A device that provides an interface between two dissimilar electronic devices. For example, the AC adaptor modifies the power from a wall outlet for use by the computer. This term also refers to the add-in circuit cards that control external devices, such as video monitors and magnetic tape devices.

**allocate**: To assign a space or function for a specific task.

**alphanumeric**: Keyboard characters including letters, numbers and other symbols, such as punctuation marks or mathematical symbols.

**alternating current (AC)**: Electric current that reverses its direction of flow at regular intervals.
**analog signal:** A signal whose characteristics such as amplitude and frequency vary in proportion to (are an analog of) the value to be transmitted. Voice communications are analog signals.

**ANSI:** American National Standards Institute. An organization established to adopt and define standards for a variety of technical disciplines. For example, ANSI defined the ASCII standard and other information processing requirements.

**antistatic:** A material used to prevent the buildup of static electricity.

**application:** A group of programs that together are used for a specific task such as accounting, financial planning, spreadsheets, word processing and games.

**ASCII:** American Standard Code for Information Interchange. ASCII code is a set of 256 binary codes that represent the most commonly used letters, numbers, and symbols.

**async:** Short for asynchronous.

**asynchronous:** Lacking regular time relationship. As applied to computer communications, asynchronous refers to the method of transmitting data that does not require a steady stream of bits to be transmitted at regular time intervals.

**backup:** A duplicate copy of files kept as a spare in case the original is destroyed.

**batch file:** A file that can be executed from the system prompt containing a sequence of operating system commands or executable files.

**binary:** The base two number system composed of zeros and ones (off or on), used by most digital computers. The right-most digit of a binary number has a value of 1, the next a value of 2, then 4, 8, 16, and so on. For example, the binary number 101 has a value of 5. See also ASCII.

**BIOS:** Basic Input Output System. The firmware that controls data flow within the computer. See also firmware.

**bit:** Derived from "binary digit," the basic unit of information used by the computer. It is either zero or one. Eight bits is one byte. See also byte.

**board:** A circuit board. An internal card containing electronic components, called chips, which perform a specific function or increase the capabilities of the system.

**boot:** Short for bootstrap. A program that starts or restarts the computer. The program reads instructions from a storage device into the computer’s memory.

**bps:** Bits per second. Typically used to describe the data transmission speed of a modem.

**buffer:** The portion of the computer’s memory where data is temporarily stored. Buffers often compensate for differences in the rate of flow from one device to another.

**bus:** An interface for transmission of signals, data or electric power.
**byte:** The representation of a single character. A sequence of eight bits treated as a single unit; also the smallest addressable unit within the system.

**C**

**cache memory:** High speed memory which stores data that increases processor speed and data transfer rate. When the CPU reads data from main memory, it stores a copy of this data in cache memory. The next time the CPU needs that same data, it looks for it in the cache memory rather than the main memory, which saves time. The computer has two cache levels. Level one is incorporated into the processor and level two resides in external memory.

**capacity:** The amount of data that can be stored on a magnetic storage device such as a floppy disk or hard disk. It is usually described in terms of kilobytes (KB), where one KB = 1024 bytes and megabytes (MB), where one MB = 1024 KB.

**card:** Synonym for board. See board.

**CardBus:** An industry standard bus for 32-bit PC cards.

**CD-ROM:** A Compact Disc-Read Only Memory is a high capacity disc that can be read from but not written to. The CD-ROM drive uses a laser, rather than magnetic heads, to read data from the disc.

**CD-R:** A Compact Disc-Recordable disc can be written once and read many times. See also CD-ROM.

**CD-RW:** A Compact Disc-ReWritable disc can be rewritten many times. See also CD-ROM.

**character:** Any letter, number, punctuation mark, or symbol used by the computer. Also synonymous with byte.

**chassis:** The frame containing the computer.

**chip:** A small semiconductor containing computer logic and circuitry for processing, memory, input/output functions and controlling other chips.

**CMOS:** Complementary Metal-Oxide Semiconductor. An electronic circuit fabricated on a silicon wafer that requires very little power. Integrated circuits implemented in CMOS technology can be tightly packaged and are highly reliable.

**cold start:** Starting a computer that is currently off (turning on the power).

**COM1, COM2, COM3 and COM4:** The names assigned to the serial and communication ports.

**commands:** Instructions you enter at the terminal keyboard that direct the actions of the computer or its peripheral devices.

**communications:** The means by which a computer transmits and receives data to and from another computer or device. See parallel interface; serial interface.

**compatibility:** 1) The ability of one computer to accept and process data in the same manner as another computer without modifying the data or the media upon which it is being transferred. 2) the ability of one device to connect to or communicate with another system or component.
components: Elements or parts (of a system) which make up the whole (system).

computer program: A set of instructions written for a computer that enable it to achieve a desired result.

computer system: A combination of hardware, software, firmware, and peripheral components assembled to process data into useful information.

configuration: The specific components in your system (such as the terminal, printer, and disk drives) and the settings that define how your system works. You use the HW Setup program to control your system configuration.

control keys: A key or sequence of keys you enter from the keyboard to initiate a particular function within a program.

controller: Built-in hardware and software that controls the functions of a specific internal or peripheral device (e.g. keyboard controller).

co-processor: A circuit built into the processor that is dedicated to intensive math calculations.

CPS: Characters Per Second. Typically used to indicate the transmission speed of a printer.

CPU: Central Processing Unit. The portion of the computer that interprets and executes instructions.

CRT: Cathode Ray Tube. A vacuum tube in which beams projected on a fluorescent screen-producing luminous spots. An example is the television set.

cursor: A small, blinking rectangle or line that indicates the current position on the display screen.

D

data: Information that is factual, measurable or statistical that a computer can process, store, or retrieve.

data bits: A data communications parameter controlling the number of bits (binary digits) used to make up a byte. If data bits = 7 the computer can generate 128 unique characters. If data bits = 8 the computer can generate 256 unique characters.

DC: Direct Current. Electric current that flows in one direction. This type of power is usually supplied by batteries.

default: The parameter value automatically selected by the system when you or the program do not provide instructions. Also called a preset value.

delete: To remove data from a disk or other data storage device. Synonymous with erase.

device driver: A program that controls communication between a specific peripheral device and the computer. The CONFIG.SYS file contains device drivers that MS-DOS loads when you turn the computer on.

dialog box: A window that accepts user input to make system settings or record other information.
disk drive: The device that randomly accesses information on a disk and copies it to the computer’s memory. It also writes data from memory to the disk. To accomplish these tasks, the unit physically rotates the disk at high speed past a read-write head.

disk storage: Storing data on magnetic disk. Data is arranged on concentric tracks much like a phonograph record.

display: A CRT, LCD, or other image producing device used to view computer output.

documentation: The set of manuals and/or other instructions written for the users of a computer system or application. Computer system documentation typically includes procedural and tutorial information as well as system functions.

DOS: Disk Operating System. See operating system.

driver: A software program, generally part of the operating system, that controls a specific piece of hardware (frequently a peripheral device such as a printer or mouse).

Dual Pointing Device: Pointing device consisting of AccuPoint and Touch Pad. Both of these device can function together or separately. See AccuPoint and Touch Pad.

DVD-R (+R, -R): A Digital Versatile Disc-Recordable disk can be written once and read many times. The DVD-R drive uses a laser to read data from the disc.

DVD-RAM: A Digital Versatile Disc-Random Access Memory is a high-capacity, high performance disc that lets you store large volumes of data. The DVD-ROM drive uses a laser to read data from the disc.

DVD-ROM: A Digital Versatile Disc-Read Only Memory is a high capacity, high performance disc suitable for playback of video and other high-density files. The DVD-ROM drive uses a laser to read data from the disc.

DVD-RW (+RW, -RW): A Digital Versatile Disc-ReWritable disc can be rewritten many times.

echo: To send back a reflection of the transmitted data to the sending device. You can display the information on the screen, or output it to the printer, or both. When a computer receives back data it transmitted to a CRT (or other peripheral device) and then retransmits the data to printer, the printer is said to echo the CRT.

erase: See delete.

escape: 1) A code (ASCII code 27), signaling the computer that what follows are commands; used with peripheral devices such as printers and modems.
2) A means of aborting the task currently in progress.

escape guard time: A time before and after an escape code is sent to the modem which distinguishes between escapes that are part of the transmitted data, and escapes that are intended as a command to the modem.

execute: To interpret and execute an instruction.
Extended Capability Port: An industry standard that provides a data buffer, switchable forward and reverse data transmission, and run length encoding (RLE) support.

**F**

fast infrared: An industry standard that enables cableless infrared serial data transfer at speeds of up to 4 Mbps.

file: A collection of related information; a file can contain data, programs, or both.

fingerprint sensor: The fingerprint sensor compares and analyzes the unique characteristics in a fingerprint.

firmware: A set of instructions built into the hardware which controls and directs a microprocessor’s activities.

floppy disk: A removable disk that stores magnetically encoded data.

floppy disk drive (FDD): An electromechanical device that reads and writes to floppy disks.

Fn-esse: A TOSHIBA utility that lets you assign functions to hot keys.

folder: An icon in Windows used to store documents or other folders.

format: The process of readying a blank disk for its first use. Formatting establishes the structure of the disk that the operating system expects before it writes files or programs onto the disk.

function keys: The keys labeled F1 through F12 that tell the computer to perform certain functions.

**G**

gigabyte (GB): A unit of data storage equal to 1024 megabytes. See also megabyte.

graphics: Drawings, pictures, or other images, such as charts or graphs, to present information.

**H**

hard disk: A non-removable disk usually referred to as drive C. The factory installs this disk and only a trained engineer can remove it for servicing. Also called fixed disk.

hard disk drive (HDD): An electromechanical device that reads and writes a hard disk. See also hard disk.

hardware: The physical electronic and mechanical components of a computer system: typically, the computer itself, external disk drives, etc. See also software and firmware.

hertz: A unit of wave frequency that equals one cycle per second.

hexadecimal: The base 16 numbering system composed of the digits 0 through 9 and the letters A, B, C, D, E, and F.

host computer: The computer that controls, regulates, and transmits information to a device or another computer.

hot key: The computer’s feature in which certain keys in combination with the extended function key, FFn, can be used to set system parameters, such as speaker volume.
**HW Setup:** A TOSHIBA utility that lets you set the parameters for various hardware components.

**icon:** A small graphic image displayed on the screen or in the indicator panel. In Windows, an icon represents an object that the user can manipulate.

**i.LINK (IEEE1394):** This port enables high-speed data transfer directly from external devices such as digital video cameras.

**infrared port:** A cableless communications port capable of using infrared signals to send serial data.

**input:** The data or instructions you provide to a computer, communication device or other peripheral device from the keyboard or external or internal storage devices. The data sent (or output) by the sending computer is input for the receiving computer.

**instruction:** Statements or commands that specify how to perform a particular task.

**interface:** 1) Hardware and/or software components of a system used specifically to connect one system or device to another.  2) To physically connect one system or device to another to exchange information.  3) The point of contact between user, the computer, and the program, for example, the keyboard or a menu.

**interrupt request:** A signal that gives a component access to the processor.

**I/O:** Input/output. Refers to acceptance and transfer of data to and from a computer.

**I/O devices:** Equipment used to communicate with the computer and transfer data to and from it.

**IrDA 1.1:** An industry standard that enables cableless infrared serial data transfer at speeds of up to 4 Mbps.

**jumper:** A small clip or wire that allows you to change the hardware characteristics by electrically connecting two points of a circuit.

**K:** Taken from the Greek word kilo, meaning 1000; often used as equivalent to 1024, or 2 raised to the 10th power. See also byte and kilobyte.

**KB:** See kilobyte.

**keyboard:** An input device containing switches that are activated by manually pressing marked keys. Each keystroke activates a switch that transmits a specific code to the computer. For each key, the transmitted code is, in turn, representative of the (ASCII) character marked on the key.

**kilobyte (KB):** A unit of data storage equal to 1024 bytes. See also byte and megabyte.
L

**level 2 cache:** See cache.

**Light Emitting Diode (LED):** A semiconductor device that emits light when a current is applied.

**Liquid Crystal Display (LCD):** Liquid crystal sealed between two sheets of glass coated with transparent conducting material. The viewing-side coating is etched into character forming segments with leads that extend to the edge of the glass. Applying a voltage between the glass sheets alters the brightness of the liquid crystal.

**LSI:** Large Scale Integration.
1) A technology that allows the inclusion of up to 100,000 simple logic gates on a single chip.
2) An integrated circuit that uses large scale integration.

M

**main board:** See motherboard.

**megabyte (MB):** A unit of data storage equal to 1024 kilobytes. See also kilobyte.

**megahertz:** A unit of wave frequency that equals 1 million cycles per second. See also hertz.

**menu:** A software interface that displays a list of options on the screen. Also called a screen.

**microprocessor:** A hardware component contained in a single integrated circuit that carries out instructions. Also called the central processing unit (CPU), one of the main parts of the computer.

**mode:** A method of operation, for example, the boot mode, Standby Mode or the Hibernation Mode.

**modem:** Derived from modulator/demodulator, a device that converts (modulates) digital data for transmission over telephone lines and then converts modulated data (demodulates) to digital format where received.

**monitor:** A device that uses rows and columns of pixels to display alphanumeric characters or graphic images. See also CRT.

**motherboard:** A name sometimes used to refer to the main printed circuit board in processing equipment. It usually contains integrated circuits that perform the processor’s basic functions and provides connectors for adding other boards that perform special functions. Sometimes called a main board.

**MP3:** An audio compression standard that enables high-quality transmission and real-time playback of sound files.

N

**non-system disk:** A formatted floppy disk you can use to store programs and data but you cannot use to start the computer. See system disk.

**nonvolatile memory:** Memory, usually read-only (ROM), that is capable of permanently storing information. Turning the computer’s power off does not alter data stored in nonvolatile memory.
numeric keypad overlay: A feature that allows you to use certain keys on the keyboard to perform numeric entry, or to control cursor and page movement.

OCR: Optical Character Recognition (reader). A technique or device that uses laser or visible light to identify characters and input them into a storage device.

online state: A functional state of a peripheral device when it is ready to receive or transmit data.

operating system: A group of programs that controls the basic operation of a computer. Operating system functions include interpreting programs, creating data files, and controlling the transmission and receipt (input/output) of data to and from memory and peripheral devices.

output: The results of a computer operation. Output commonly indicates data. 1) printed on paper, 2) displayed at a terminal, 3) sent through the serial port of internal modem, or 4) stored on some magnetic media.

parallel interface: Refers to a type of information exchange that transmits information one byte (8 bits) at a time. See also serial interface.

parity: 1) The symmetrical relationship between two parameter values (integers) both of which are either on or off; odd or even; 0 or 1. 2) In serial communications, an error detection bit that is added to a group of data bits making the sum of the bits even or odd. Parity can be set to none, odd, or even.

password: A unique string of characters used to identify a specific user. The computer provides various levels of password protection such as user, supervisor and eject.

pel: The smallest area of the display that can be addressed by software. Equal in size to a pixel or group of pixels. See pixel.

peripheral component interconnect: An industry standard 32-bit bus.

peripheral device: An I/O device that is external to the central processor and/or main memory such as a printer or a mouse.

pixel: A picture element. The smallest dot that can be made on a display or printer. Also called a pel.

plug and play: A capability with Windows that enables the system to automatically recognize connections of external devices and make the necessary configurations in the computer.

port: The electrical connection through which the computer sends and receives data to and from devices or other computers.

Power Saver Utility: A TOSHIBA utility that lets you set the parameters for various power-saving functions.
**printed circuit board (PCB):** A hardware component of a processor to which integrated circuits and other components are attached. The board itself is typically flat and rectangular, and constructed of fiberglass, to form the attachment surface.

**program:** A set of instructions a computer can execute that enables it to achieve a desired result. See also application.

**prompt:** A message the computer provides indicating it is ready for or requires information or an action from you.

**R**

**Radio frequency interference (RFI) shield:** A metal shield enclosing the printed circuit boards of the printer or computer to prevent radio and TV interference. All computer equipment generates radio frequency signals. The FCC regulates the amount of signals a computing device can allow past its shielding. A Class A device is sufficient for office use. Class B provides a more stringent classification for home equipment use. TOSHIBA portable computers comply with Class B computing device regulations.

**Random Access Memory (RAM):** High speed memory within the computer circuitry that can be read or written to.

**restart:** Resetting a computer without turning it off (also called “warm boot” or "soft reset"). See also boot.

**RGB:** Red, green, and blue. A device that uses three input signals, each activating an electron gun for a primary additive color (red, green, and blue) or port for using such a device. See also CRT.

**RJ11:** A modular telephone jack.

**RJ45:** A modular LAN jack.

**ROM:** Read Only Memory: A nonvolatile memory chip manufactured to contain information that controls the computer’s basic operation. You cannot access or change information stored in ROM.

**S**

**SCSI:** Small Computer System Interface is an industry standard interface for connection of a variety of peripheral devices.

**SD card:** Secure Digital cards are flash memory widely used in a variety of digital devices such as digital cameras and Personal Digital Assistants.

**serial communications:** A communications technique that uses as few as two interconnecting wires to send bits one after another.

**serial interface:** Refers to a type of information exchange that transmits information sequentially, one bit at a time. Contrast: Parallel interface.

**SIO:** Serial Input/Output. The electronic methodology used in serial data transmission.

**soft key:** Key combinations that emulate keys on the IBM keyboard, change some configuration options, stop program execution, and access the numeric keypad overlay.
**Glossary**

**software:** The set of programs, procedures and related documentation associated with a computer system. Specifically refers to computer programs that direct and control the computer system’s activities. See also hardware.

**stop bit:** One or more bits of a byte that follow the transmitted character or group codes in asynchronous serial communications.

**subpixel:** Three elements, one red, one green and blue (RGB), that make up a pixel on the color LCD. The computer sets subpixels independently, each may emit a different degree of brightness. See also pixel.

**synchronous:** Having a constant time interval between successive bits, characters or events.

**system disk:** A disk that has been formatted with an operating system. For MS-DOS the operating system is contained in two hidden files and the COMMAND.COM file. You can boot a computer using a system disk. Also called an operating system disk.

**T**

**terminal:** A typewriter-like keyboard and CRT display screen connected to the computer for data input/output.

**TFT display:** A liquid crystal display (LCD) made from an array of liquid crystal cells using active-matrix technology with thin film transistor (TFT) to drive each cell.

**Touch Pad:** A pointing device integrated into the TOSHIBA computer palm rest.

**TTL:** Transistor-transistor logic. A logic circuit design that uses switching transistors for gates and storage.

**U**

**Universal Serial Bus:** This serial interface lets you communicate with several devices connected in a chain to a single port on the computer.

**V**

**VGA:** Video Graphics Array is an industry standard video adaptor that lets you run any popular software.

**volatile memory:** Random access memory (RAM) that stores information as long as power is supplied to the computer.

**W**

**warm start:** Restarting or resetting a computer without turning it off.

**window:** A portion of the screen that can display its own application, document or dialog box. Often used to mean a Microsoft Windows window.

**Wireless LAN:** Local Area Network (LAN) through wireless communication.

**write protection:** A method for protecting a floppy disk from accidental erasure.
