Installation Instructions

- 1 Slide the keystone jack into the surface-mount box at an angle, rather than laying it flat. Then push down the back end of the jack until you hear the jack snap into place. You won't need to press the jack with much force to install it correctly.

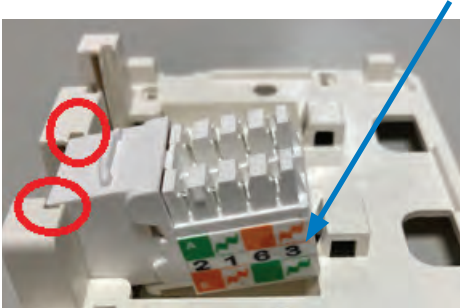

Figure 1

- 2 When the keystone jack has been properly clicked into place, turn the box over. It should look like this from underneath. If the jack is loose, redo the previous step to ensure it snaps correctly into place.

Figure 2

- 3 Figures 3, 4 and 5 show a comparison of the surface-mount box with and without the keystone jack installed.

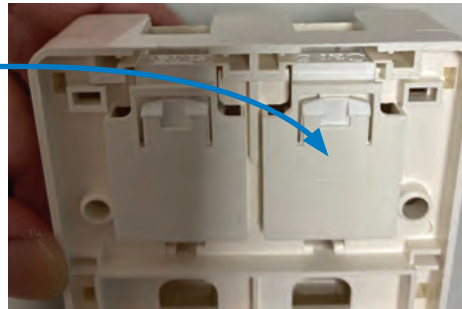

Figure 4

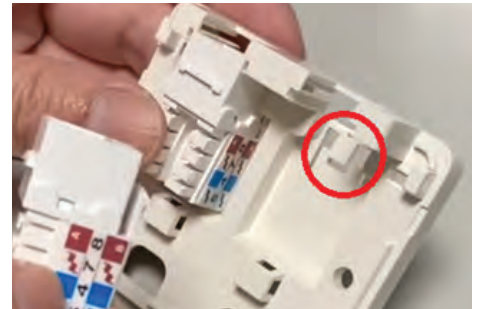

Figure 5

- 4 Connect a Cat5a or Cat6 Ethernet cable to the keystone jack after the jack has been successfully installed. The surface-mount box's lid helps set the jack in place to prevent it from moving around.
