Quiet Fan Panels

Equipment cooling without the noise.

FEATURES
- » Each fan is 50 cfm.
- » Mount horizontally in only 3U (5.25") of rack space.
- » Include fan guards for safety.
- » Include cord and plug.

OVERVIEW

The ultra-quiet fan(s) in this panel cool off your cabinets with a free-air noise rating of less than 33 dB. That means you won't have to put up with any distracting rattle and hum—adding to the ambient noise you already hear from the operation of components as they run.

Available with one or two fans, the Quiet Fan Panel installs easily in any cabinet with 19" rails. The panel needs only 3 RU (5.25") of space, so you can maximize the remaining space in the cabinet with more heat-sensitive components installed below.

The Quiet Fan Panels provide efficient air circulation throughout the cabinet, essentially eliminating the potentially harmful effects of heat on your expensive cabinet-mount equipment.

Each fan provides 50 cfm (for a total of 100 cfm in the two-fan model) and is designed to give you continuous, reliable operation so your critical server room components operate at an optimal temperature around the clock.

Measuring 5.25"H x 19"W x 5.85"D (13.3 x 48.3 x 14.9 cm), the aluminum panel is black with a textured powder coat finish, seamlessly matching the look of many standard cabinets.

For ease of installation, the fan panel and its safety fan guard grill ship fully assembled.

The cord and plug attached to the panel supplies 110–125-VAC, 50–60-Hz power from a nearby outlet.

NOTE: For indoor use only.
