EASY, FAST, & SAFE

Cleaning with Pure Water

WHAT IS PURE WATER?

It's water in its purest form, physically processed to remove the minerals that would otherwise lead to limescale spots and streaks. Such impurities are referred to as **TDS** (total dissolved solids) and are measured in **ppm** (parts per million). The water is considered 100% demineralized (pure) when TDS is 0 ppm.

ADVANTAGES

EASY

Easy to operate and simple resin change

FAST

Twice as fast as traditional glass cleaning - just one process

COST-SAVING

Half the labor costs and no lift rental fees

ENVIRONMENTALLY FRIENDLY

Glass cleaning without harmful cleaning chemicals

SAFE

Safely work from the ground up to 55 ft., with no need for ladders or lifts

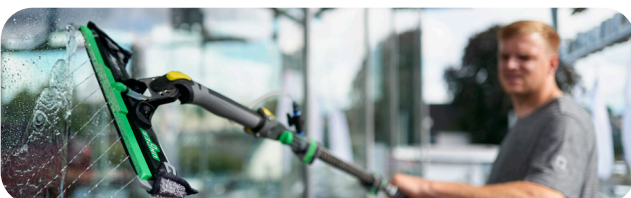

TYPICAL APPLICATIONS

WINDOW AND FACADE CLEANING:

- Fast and effective method – great results
- Easy access of hard to reach areas

SOLAR PANEL CLEANING:

- Regular cleaning prevents build up of dirt for greater energy output
- Leaves no streaks or detergent residue

Water purification

TYPES OF WATER PURIFICATION

There are three methods of water purification that are used in the window cleaning industry: Deionization, Nanofiltration, and Reverse Osmosis.

Find the water filtration system that meets your pure water cleaning needs.

SITUATION	ULTRA	NANO	RO
Hard Water		✓	✓
Daily Window Cleaning	✓	✓	✓
Low Water Pressure			✓
Access to Electricity			✓
Compact & Lightweight	✓		
Investment Cost	Low	Medium	High
Resin Replacement	High	Medium	Low
Membrane Replacement		Low	Low

FILTRATION METHODS

Deionization: Ultra resin pack filtration

Nanofiltration: High-Quality triple-stage filtration using a large pore membrane

Reverse Osmosis: High-Quality triple-stage filtration using a smaller pore membrane

UNDERSTANDING TDS

TDS (Total Dissolved Solids) measures the mineral content in water, which affects how efficiently a pure water system operates. Higher TDS consumes more resin, reducing system output before resin change is needed. Lower TDS allows for more pure water production with less resin use. Understanding your TDS level helps determine the right system capacity and maintenance needs.

Efficient pure water cleaning with a Deionization (DI) system

HYDRO POWER® ULTRA SYSTEM

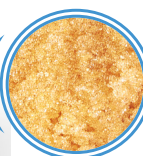

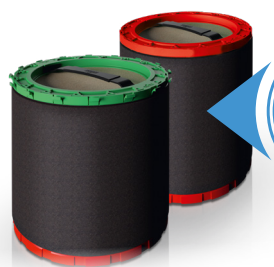

Designed to be the perfect fit for professional window cleaners that demand the best for their window washing services. With over 30% more pure water per resin filling, the FloWater Technology 2.0 ensures a highly efficient flow of water through the whole tank, optimizing the resin saturation.

Economical Pure Water System with Nanofiltration & DI Technology for Superior Cleaning

HYBRID PURE WATER SYSTEM

Revolutionize your cleaning process with this advanced, hybrid Pure Water System. Designed for cleaning professionals, it seamlessly integrates a triple-stage filtration system with a pre-filter, a 40" large-pore nano-membrane, and the proven Hydropower DI resin unit.

HydroPower® NANO COMPLETE

Part No.	Weight	Size	Case Qty.
NANOC	66 lbs (unit) / 78 lbs (filled)	25.5" L x 19" W x 47.5" H	1

NO ELECTRICITY

HYDRO POWER® NANO SYSTEM

The system delivers an economical and effective cleaning solution that produces spotless, pure water for a streak-free finish. With an emphasis on portability, performance, and ease of use, it's a perfect choice for cleaning windows, facades, and hard-to-reach surfaces.

RECOMMENDED USE

- Areas with moderate to high water hardness
- Continuous water purification to meet high demand

ADDITIONAL FEATURES

- Produces up to 1.5 gallons of pure water per minute for streak-free cleaning of smooth exterior surfaces
- Compact, portable design ensures easy transport and maintenance
- **Triple-stage filtration**
 - Pre-filter to capture chlorine and sediments
 - Large pore nano membrane removes impurities from water at a molecular level to provide maximum water flow
 - DI resin to filter any remaining impurities

HydroPower® NANO BASE

NANOB	46 lbs (unit)	25.5" L x 19" W x 47.5" H	1

HYDROPOWER[®] RO SYSTEM

REVERSE OSMOSIS FILTER (RO)

Cleaning with pure water reduces running costs, especially in areas with hard water. The **HydroPower[®] RO** pressurizes water through a 3-stage filtration process, resulting in high cleaning efficiency that leaves surfaces streak-free. The boost function provides high pressure dirt and debris removal while optimizing filter usage.

RECOMMENDED USE

- Areas with hard to very hard water
- Constant water purification with high water demand

ADDITIONAL FEATURES

- Pure water mode (up to 60 gal. per minute output): pure water for streak-free cleaning of smooth exterior surfaces
- Boost mode (up to 180 gal. per minute output): strong tap water jet on demand for pre-washing heavily soiled surfaces and other dirt that a brush can't reach
- Compact and robust design makes it easy to transport and maintain
- **High-Quality 3-stage filtration**
 - Pre-filter to capture chlorine and sediments
 - Premium 30" RO membrane to remove dissolved minerals
 - DI polisher to filter any remaining impurities

HydroPower[®] RO

Part No.	Weight	Size	Case Qty.
RO20S	99 lbs (unit) / 110 lbs (filled)	36" L x 21" W x 18" H	1

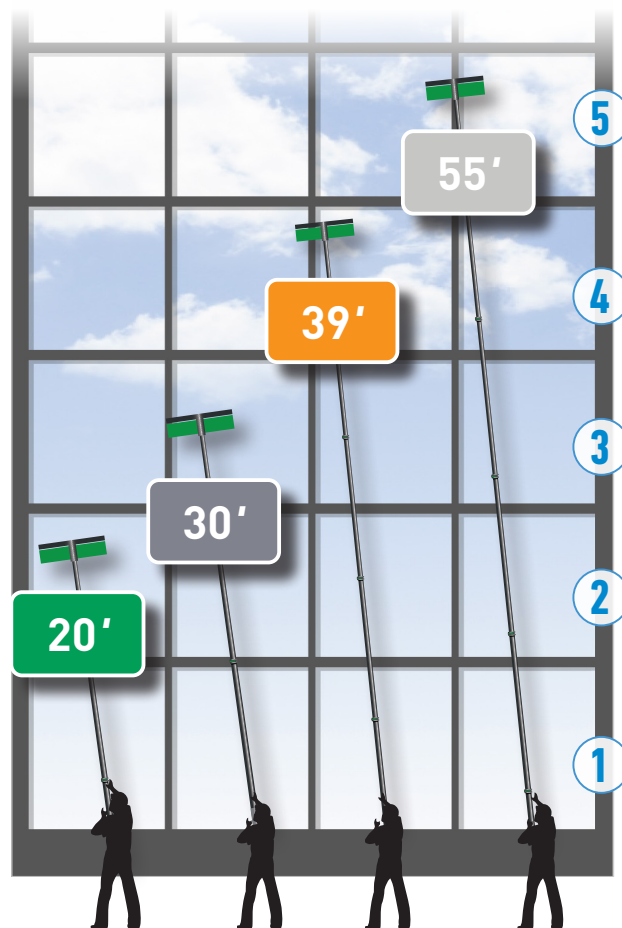

Safely work up to 55 ft., with no ladders or lifts

REACH NEW HEIGHTS FROM THE GROUND

Cleaning windows from the ground using **UNGER nLITE®** telescopic poles is an efficient and safe method, especially for heights up to 55 feet. These poles are made from lightweight yet durable material using carbon fiber and fiberglass. This allows cleaners to reach high windows without the need for ladders or scaffolding, reducing the risk of falls. To ensure safety, these poles are well-built and extend smoothly, with secure locking clamps to avoid accidents.

Strong and lightweight high-reach modular pole systems designed for commercial use

UNGER nLITE®

The next generation of the **UNGER nLITE®** Waterfed Pole System exemplifies innovation and high quality. Using pure water is the fastest and most efficient way to clean outdoor glass surfaces. The lightweight and rigid **nLITE®** carbon waterfed poles help keep workers safe by allowing them to clean from the ground.

ADVANTAGES

- No twisting: trouble-free work and less wear and tear
- Optimal stability-to-weight ratio
- Greater pole rigidity
- More precise control of the cleaning movement

Telescopic Poles (CF60T, CC85T, CC60T, CC32T) can extend up to 28' depending on pole size chosen. Extension Poles cannot be added to Telescopic Poles.

FULL FLEXIBILITY

Modular construction allows you to add on or remove Extension Poles to create telescopic poles in different lengths for cleaning at various heights.

DIAMETER

Diameter of the **nLite®** pole you are holding will never exceed 1.4", irrespective of the number of Extension Poles.

YELLOW VISUAL WARNING AREA

The top of the Extension Pole helps to avoid unintentional separation.

DURABLE ENDCAP

Prevents accidental damage to the end of the pole and features a side opening for the hose exit when used inside the pole.

nLITE® POWERPAD

nLITE® PowerPad: For faster and easier pure water cleaning

nLITE® POWERPAD

The innovative **nLITE® PowerPad** is the ultimate alternative to waterfed brushes for cleaning glass surfaces. This intuitive design makes cleaning with pure water faster and more effective. The PowerPad is ideal for first floor cleaning. It is perfect for pure water professionals and those new to pure water technology.

INNOVATIVE MICROFIBER CLEANING PAD

- **Faster dirt removal**, as the microfiber cleaning pad covers more surface area compared to a traditional bristle brush.
- **Self-cleaning feature** via continuous pure water rinsing from the integrated rinse bar
- **Highly effective microfiber technology** for streak-free surface cleaning
- **Glides easily** over glass surfaces

- Lightweight, ergonomic surface scraper offers simple blade change
- Ergonomic design with rubber-coated handle
- Easy blade change. Protection cap ensures safety
- Features a reversible razor/blunt-edge blade

→ EXPERT TIPS

- Check if glass is scratch-resistant and suitable for scraper use
- Unsuitable for use on plexiglas, crown glass, solar glass, safety glass (ESG). Follow the manufacturer's care instructions
- Perform a scrape test in advance on an inconspicuous section if possible
- Before starting work, check the glass for preexisting damage and report it, if necessary
- Replace or reverse damaged blades
- The surface to be scraped should always be wet
- It is best to use a release agent
- Always scrape in one direction! Never pull the scraper back – scratch risk!
- After scraping, check if adhesive or stucco residues are stuck to blade. If necessary, change or reverse blade

ATTENTION!

UNGER blades are razor-sharp.
Always handle with greatest care.

- **What is GSM?*** - GSM is a metric term which stands for grams per square meter. It is a standard industry wide method of measurement of the density or weight of a fabric.

BENEFITS

- **VERSATILE** - Quickly achieves a streak-free finish on various surfaces for a thorough clean
- **ABSORBENCY** - Ranges in absorbency: from 1100 ml up to 1700 ml of liquid, for heavier cleaning tasks
- **GENTLE ON SURFACES** - 16-split-blended microfiber cleans deeply without scratching delicate materials
- **QUICK DRYING** - Allows for faster reuse, reducing downtime
- **DURABLE DESIGN** - Cloths provide up to 1,500 wash cycles, ensuring long-lasting performance

MICROWIPE GRADING SYSTEM

UNGER follows several performance criteria, which have been tested, measured and evaluated by ASTM Laboratory and other US standard tests to help the user decide which microfiber cloth to use for the application

- **Durability (Wear Cycles)**** - The higher this factor, the more frequently the microfiber cloth can be moved across a rough surface before it becomes thinner and wears through.
- **Washing Cycles** - A large number of washing cycles, using machine wash and drying sequences, provides information on the durability of the cloth before quality starts to decline.

** ASTM tests *Standard US industry tests

MULTI-SURFACE CLEANING

WHAT IS THE SMARTCOLOR™ SYSTEM?

Helps prevent cross-contamination with easy color identification.

RECOMMENDED USAGE

- Restrooms / High Bacteria Areas
- Specialty Areas / Labs / Gymnasiums
- Food Service Area / Kitchens / Break Rooms
- General Area / Low-Risk Bacteria Area / Offices / Lobbies / Classrooms

RESTROOMR_X™ Cart System

A HIGHER LEVEL OF CLEAN

The **RestroomR_X** Cart is the first cleaning system designed by custodians to help them work safer, faster and better than ever before. Comprised of three parts, an innovative restroom cart, advanced floor care tools and best in class cleaning accessories, the **RestroomR_X** Cart System supports the entire process and improves productivity while delivering the highest level of clean.

SMART DESIGN

The **UNGER RestroomR_X** Cart is designed to streamline restroom maintenance with improved posture, easy maneuverability, and efficient tool organization.

EASY TO MANEUVER

- The handrail allows you to maneuver the cart in and out of restroom entrances quicker and easier

LARGE STORAGE

- With an expanded storage module, you'll minimize trips to the supply closet

NARROW DESIGN

- The narrow tool tower design allows all tools to remain within the boundaries of the cart

STAY ORGANIZED

- Every tool in the system has a designated position on the cart. Tools are always where they need to be, and always clipped on securely

CONTAINED BASE

- The base of the cart also acts as a drip tray catching excess liquid, so nothing ever drips on restroom or hallway floors

Cleaning chemicals and paper supplies not included

FLOOR CARE SYSTEMS

How to mop a room efficiently

METHOD OF MOPPING

Keep floors cleaner and safer than ever with Unger's selection of floor cleaning tools. Choose from a wide selection of microfiber flat mops, pads, and string mops that can handle even the toughest jobs.

To get the most out of a microfiber mop, begin by outlining the space to be cleaned. Then, starting in the corner furthest from the exit, walk backwards creating an overlapping "S" motion with the mop. Adjusting the height of the mop to the individual user is important to avoid strain and maintain proper form.

How does the OmniClean work to truly clean floors?

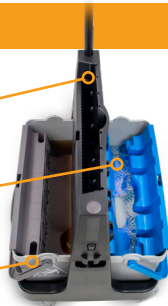

DUAL BUCKET TECHNOLOGY

OmniClean features dual bucket technology to separate clean and dirty solutions, ensuring the StayClean charging bucket is always clean.

Dual Bucket System: increase productivity and improve hygiene

DUAL BUCKET TECHNOLOGY

UNGER'S commercial floor cleaning buckets feature a dual-bucket system that keeps floors cleaner and safer than ever.

This system consists of two separate compartments: one for rinsing the dirty mop and one for holding clean cleaning solution. The rinse compartment collects the dirt from the mop, preventing it from contaminating the clean solution. As a result, the clean water stays cleaner longer, ensuring more effective and hygienic floor cleaning.

Available in three colors: gray or yellow for general use and red for restroom only use.

EASY TO EMPTY

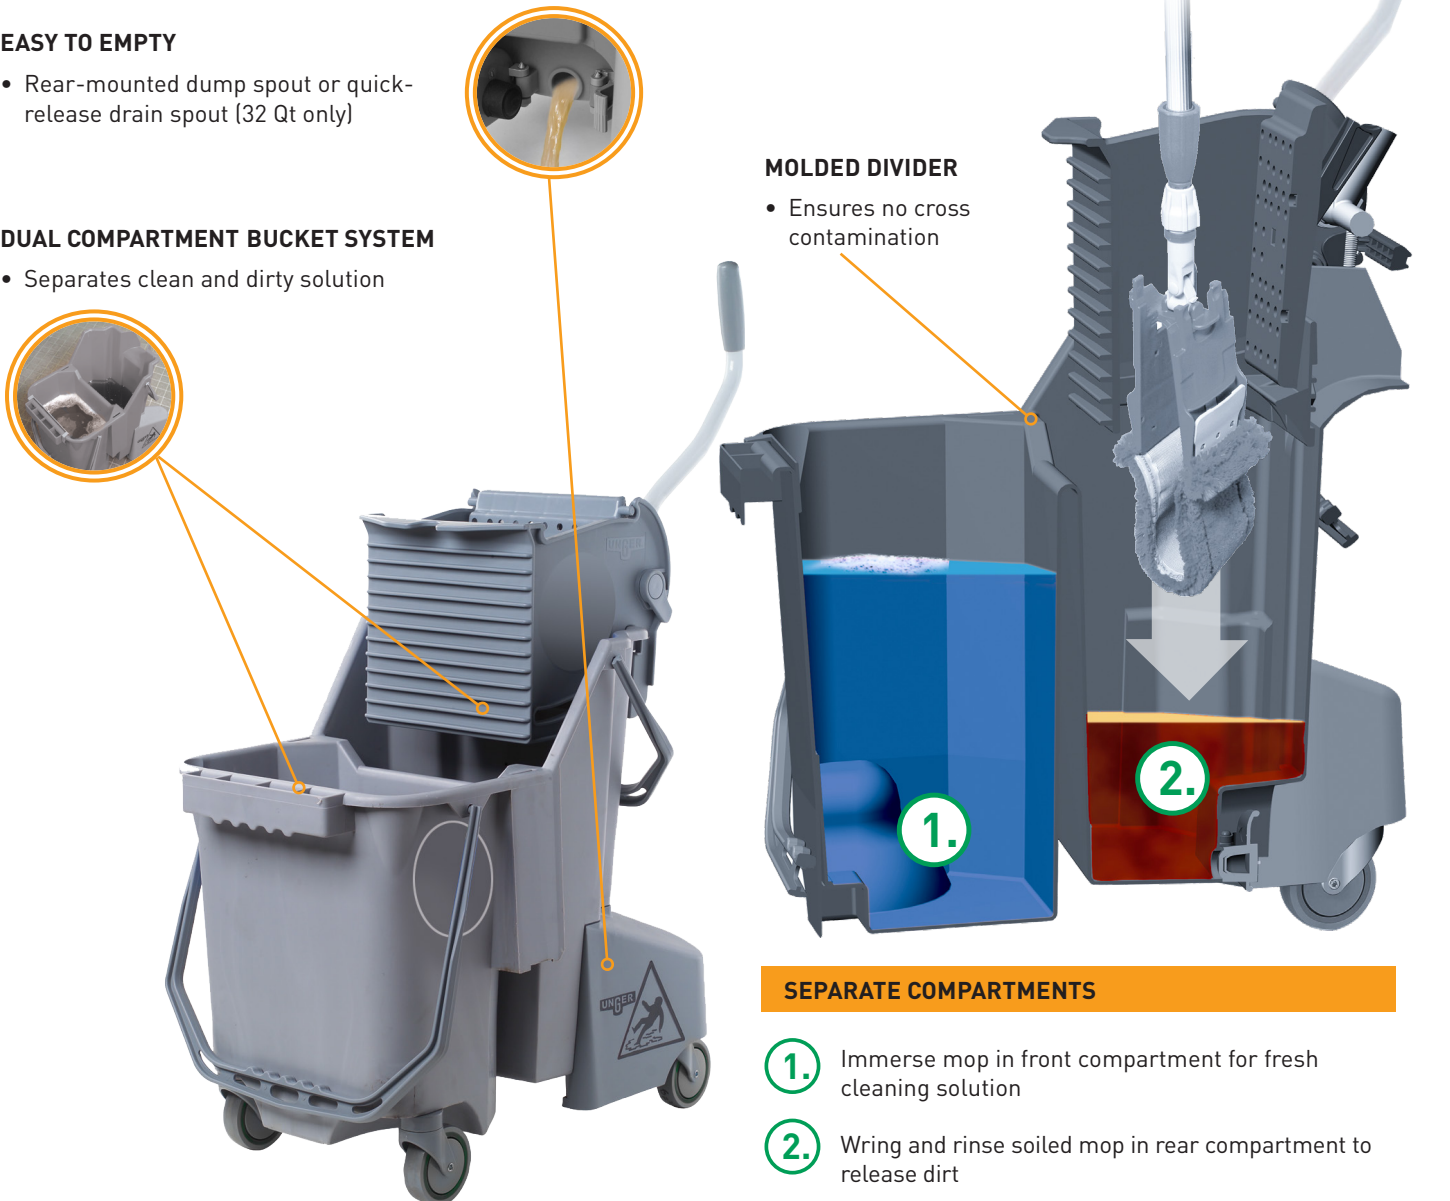

- Rear-mounted dump spout or quick-release drain spout (32 Qt only)

DUAL COMPARTMENT BUCKET SYSTEM

- Separates clean and dirty solution

MOLDED DIVIDER

- Ensures no cross contamination

SEPARATE COMPARTMENTS

1. Immerse mop in front compartment for fresh cleaning solution
2. Wring and rinse soiled mop in rear compartment to release dirt

SMARTCOLOR™

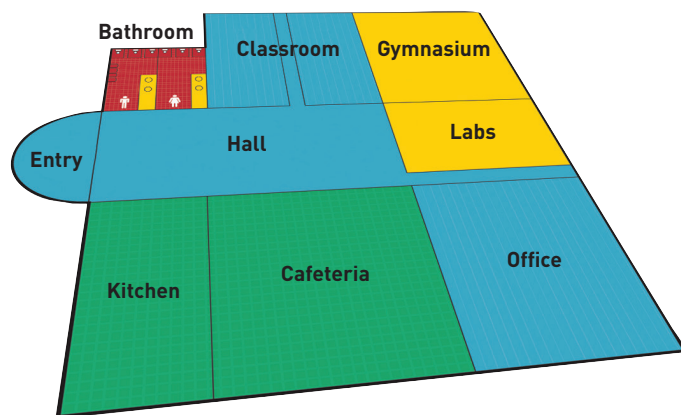

The advantages of color-coding

WHAT IS COLOR CODING?

Every facility is unique, which is why the Unger SmartColor Cleaning System is the first visual coding system designed to adapt to the specific, and changing, needs of your business. As your building's footprint grows or personnel needs fluctuate, SmartColor will keep your business ahead of all its cleaning demands.

SmartColor achieves its distinct color-coding through interchangeable features and durable metallic decals. This gives you the flexibility to easily retask tools for different areas or functions as required.

- Improves Training and Communication
- Prevents Cross-Contamination
- Enhances Building Safety
- Deters Chemical Misuse
- Simplifies Supply Management
- Elevates Employee Performance
