

DisplayLink Manager - macOS

Installation

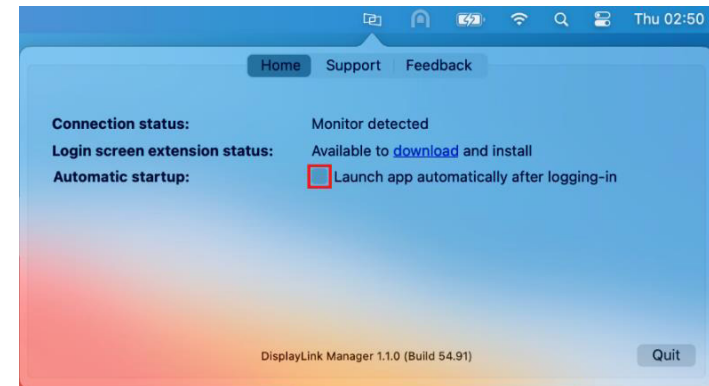

1. Download the latest version from the following location:
[\[displaylink\] mac usb display adapter.zip](#)
2. Run the **DMG File** associated with the installed **macOS Version**, located in the **[DisplayLink] Mac USB Display Adapter** folder.
3. Navigate to **Finder > Applications** and open the **DisplayLink Manager** app.

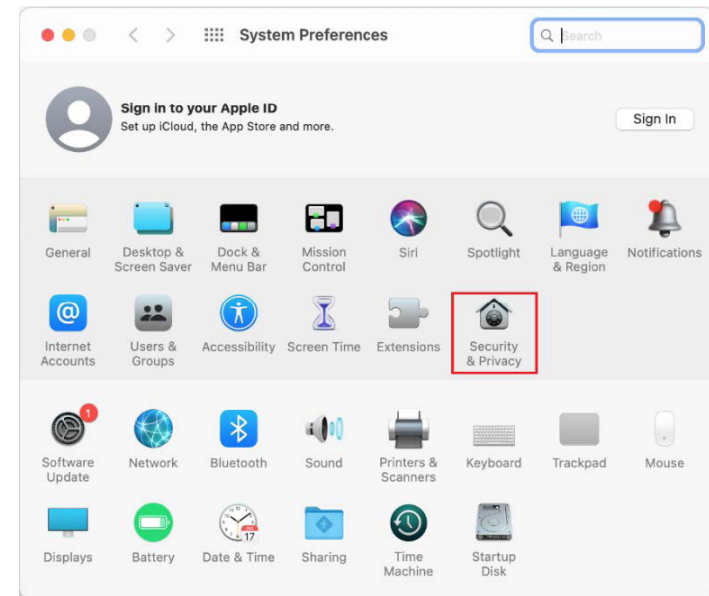

4. Select the **DisplayLink Manager** app icon from the **Menu Bar**.

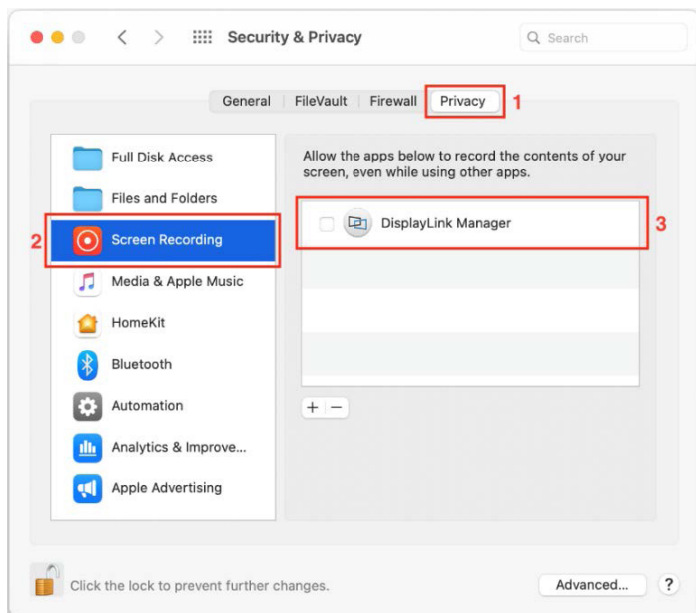

5. Select the check-box for **“Launch app automatically after logging-in”** from the **Automatic startup:** section.

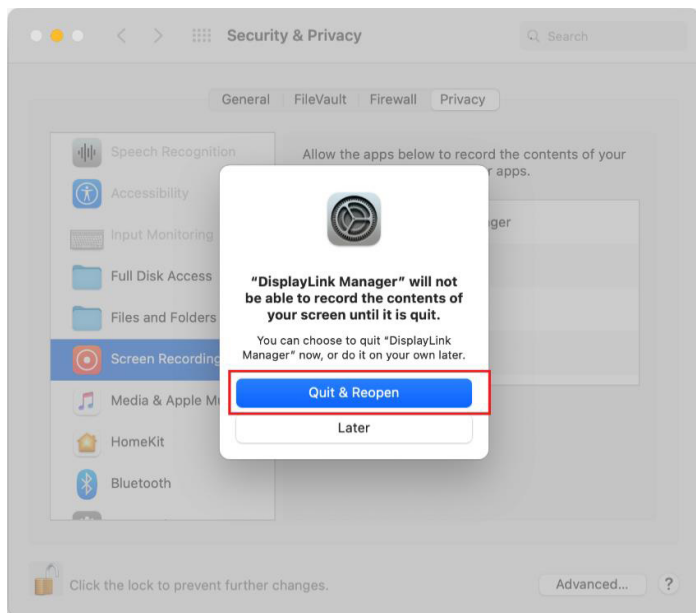

6. Connect the **StarTech.com Dock/Adapter** to the **Mac** and **Video Display Device**.
7. Navigate to **System Preferences > Security & Privacy**.

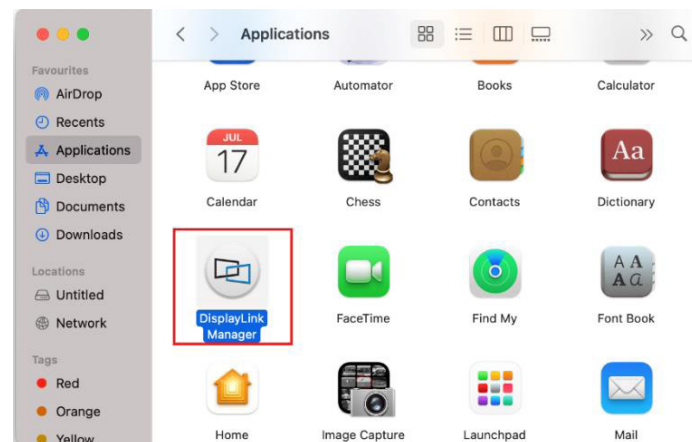

- Navigate to the **Privacy** tab (1).
- Select **Screen Recording** (2) > **DisplayLink Manager** (3). This step permits the Mac to use the **DisplayLink Manager** app to send video from the **StarTech.com Dock/Adapter** to the **Video Display Device**.

- Since the new permission will activate the next time the **DisplayLink Manager** app is started, select the prompt to **Quit & Reopen**. In Catalina 10.15.x please select **Quit Now**.

- Navigate to **Finder > Applications** and open the **DisplayLink Manager** app.

Troubleshooting

- Ensure the check-box for **“Launch app automatically after logging-in”** has been selected from the **Automatic startup** section. (Installation Step 5)
- On **Apple M1** powered **Macs**, there may be a prompt to install **Rosetta** during the **DisplayLink Manager** app installation process. This is currently required to allow **DisplayLink** to work on **Apple Silicon Macs**.
