

Revised: March 27, 2025

Cisco NCS 540 Series Routers Licensing Quick Reference

Licensing for Cisco IOS XR Routers

This article provides information on available licenses and deployment solutions on Cisco IOS XR Routers.

Cisco IOS XR licensing is structured to provide flexibility and scalability for network operators, with a focus on high-end routers.

Cisco Network Convergence System 540 Series Routers

The Cisco Network Convergence System (NCS) 540 Series routers are a family of fixed-form-factor routers designed for the service provider market. These routers offer high-density, small-footprint solutions for deployment in provider edge and access networks. These routers are optimized for the 5G and multicloud era, providing high throughput, low latency, and a rich set of features to support various applications, including mobile backhaul, residential, and business services.

The Cisco Network Convergence System (NCS) 540 Series Routers include:

- **NCS 540 Small Density Routers:** These are compact routers designed for smaller-scale deployments, offering various interface options in a small form factor.
- **NCS 540 Medium Density Routers:** These routers provide a balance between port density and form factor, suitable for a range of edge and aggregation applications.
- **NCS 540 High-Density Routers:** These routers are aimed at high-capacity needs, offering greater port density and throughput for demanding environments.
- **NCS 540 Small Form-Factor Pluggable (SFP) Routers:** These routers are designed to accommodate a range of SFP and SFP+ interfaces, providing flexibility for different optical networking requirements.
- **NCS 540 Fixed Chassis Routers:** These are nonmodular routers with a fixed set of ports and features, optimized for specific use cases.

Licensing Solutions and Offerings

Cisco IOS XR offers licensing solutions for you to manage your licenses.

- **Smart Licensing:** A flexible and convenient cloud-based software licensing model that simplifies the management of software licenses across your organization. It automatically creates a pool of licenses or entitlements for use throughout the organization. With Smart Licensing, you only pay for the features you currently need, with the option to upgrade as necessary, ensuring the security of your investment. For more information, see [Smart Licensing](#).
- **Smart Licensing Using Policy:** An enhanced version of Smart Licensing that enables immediate use of devices right out of the box. This licensing solution streamlines the process, making it easier to manage your licenses. For more information, see [Smart Licensing Using Policy](#).
- **Specific License Reservation (SLR):** A solution specifically designed for classified environments where electronic communication is restricted. In such environments, routers are unable to communicate directly with the Cisco Smart Software Manager (CSSM) or through SSM On-Prem. SLR enables the use of all entitlements on the router without the need for communication with Cisco.

Key Differences between Licensing Solutions

Table 1: Available Licensing Solutions

License Attributes	Smart Licensing Using Policy	Smart Licensing	Specific License Reservation
Activation of Licenses	Creates a trust relationship with CSSM	Registers with CSSM	Generates code from the device to reserve licenses in CSSM
Supported Deployments	<ul style="list-style-type: none">• SSM On-Prem or CSLU deployment• Direct deployments• Offline deployment	<ul style="list-style-type: none">• SSM On-Prem deployment• Direct deployment• Offline deployment	Offline deployment for air-gapped environments
License Reporting	Generates RUM reports from the device and synchronizes with CSSM	Generates Product Instance reports from CSSM or SSM On-Prem	Not applicable for SLR

What are the Flexible Consumption Models?

The Flexible Consumption Model (FCM) is a modern licensing framework that enables you to tailor your software expenditures to real-time requirements. It provides the agility to scale software services based on fluctuating business needs, often using a subscription or usage-based payment structure. This approach offers financial flexibility, as you only pay for the software you use, and can quickly adjust subscriptions as the business landscape changes. This model of licensing is available at a low initial investment, provides easy scalability, and allows you to increase consumption of licenses as you expand.

FCM is enabled by default on the NCS 540 Series routers.

Key Features of FCM

- **Pay-as-you-grow:** Enables you to lower initial costs and add more capacity over time.
- **Simplify operations:** FCM delivers the carrier-class IOS-XR software feature set with two software suites, Essentials and Advantage, that simplify license management.
- **Utilize capital efficiently:** License pooling enables an efficient way to share licenses across the network.
- **Protect investment:** Software portability provides investment protection by enabling porting of licenses to next-generation hardware.

For more information, see [Cisco IOS XR Software Flexible Consumption Model Data Sheet](#).

Smart Licensing, Smart Licensing Using Policy and Flexible Consumption Model

Flexible Consumption Model (FCM) is a consumption model that lets you pay for software based on actual use, offering flexibility and cost efficiency.

The Smart Licensing and Smart Licensing Using Policy solutions facilitate FCM by providing a centralized way to manage licenses with ease. Combined, they deliver a user-friendly and adaptable licensing system.

FCM requires Smart Licensing registration and license usage reporting. A network under FCM is considered compliant if the FCM-enabled devices in the network are registered to Smart Licensing and are reporting the usage.

Similarly, FCM requires devices enabled with Smart Licensing Using Policy to have trust enablement and generate the first license usage report within 90 days.

Flexible Consumption model licenses are checked for usage on a daily basis. The daily license usage is reported to the Smart Licensing Manager at Cisco.com.

In short, the FCM adjusts software costs to actual usage, while Smart Licensing streamlines license management. Together, they provide a flexible and simplified licensing approach.

Parts of the FCM Model

The three parts of the FCM Model are:

1. The hardware
2. The perpetual software component, also known as Right To Use (RTU). RTU licenses are software licenses for indefinite period.
3. The recurring software component, also known as Software Innovation Access (SIA). SIA licenses are software licenses with the RTU licenses for the length of the subscription term. SIA licenses provide faster access to latest features. SIA provides pooling of licenses, continuous software upgrades.

Some product families may have additional, optional, a-la-carte software perpetual licenses for specialized platform-specific features.

FCM Model 1 License Suites

The FCM model follows a hierarchical structure where each higher-tier license encompasses the features and capabilities of the lower tiers. The tiers in the FCM Model 1 are:

- **Essentials Suite:** The foundational tier, offering basic features and capabilities. The Essentials license suite serves fundamental transport needs. It includes the IOS XR comprehensive suite of routing and management services.
- **Advantage Suite:** This tier includes everything in the Essentials tier, plus additional advanced features. The Advantage license suite enhances applications and network resilience. It includes all features of Essentials Software licenses with extra advanced routing and management services.

RTU Licenses

RTU licenses offer capability and flexibility to purchase software capacity as needed.

These are the types of RTU licenses.

- **Essential Licenses:** Are the base licenses that are required by every active port for its operation. An example of Essential License is .
- **Advantage (earlier known as Advanced licenses) without Essential licenses:** Are the licenses that are required on top of Essential Licenses for ports that use advanced features like L3VPN. An example of an advantage license is .
- **Advantage with Essential Combination Licenses:** Are the licenses that are packaged together as a combined entitlement. Example of an advantage license with essentials is .
- **Tracking Licenses:** Are the licenses that are required for the hardware for its operation. An example of a tracking license is .

Flexible Consumption Model Licenses

The table shows the various Flexible Consumption model licenses for Cisco NCS 540 Series Routers:

Table 2: FCM Licenses and Usage Consumption Pattern

Flexible Consumption Model Licenses	Consumption Pattern
Essential Licenses: <ul style="list-style-type: none">• ESS-AC-10G-RTU-1 Advantage Licenses: <ul style="list-style-type: none">• ADV-AC-10G-RTU-1	License consumption checks are performed on the chassis.
Hardware Tracking Licenses: These licenses are for the chassis. <ul style="list-style-type: none">• N540-24Z8Q2C-TRK• N540X-24Z8Q2C-TRK• N540_24Q8L2DD_TRK• N540-16-TRK 1	Licensing consumption is checked on every chassis. For example, the N540-24Z8Q2C-TRK license is tracked on the chassis.

¹ • Starting with Release 24.3.1, tracking licenses are no longer used.

Advantage with Essential Licenses

This table shows Advantage with Essential licenses entitlement and description.

Table 3: Advantage with Essential Licenses

License Product ID	License Entitlement	License Description
ADN-AC-10G-RTU-1	1 ESS RTU Tag + 1 ADV RTU Tag	Access Advantage with Essentials SW RTU v1.0 10G
ADN-AC-10G-SIA-3	1 ESS SIA 3 Tag + 1 ADV SIA 3 Tag	Access Advantage with Essentials SIA 10G 3-5 year term
ADN-AC-10G-SIA-5	1 ESS SIA 3 Tag + 1 ADV SIA 3 Tag	Access Advantage with Essentials SIA 10G 5-10 year term
ADN-AC-10G-SIA-ST	1 ESS SIA 3 Tag + 1 ADV SIA 3 Tag	Access Advantage with Essentials SIA 10G 1-35 month term
ESS-ADN-AC-10G-RT	1 ADV RTU Tag	Access Essentials to Advantage Upgrade RTU per 10G
ESS-ADN-AC-10G-SST	1 ADV SIA 3 Tag	Access Essentials to Advantage Upgrade SIA 10G 5-10 yrs
ESS-ADN-AC-10G-S3	1 ADV SIA 3 Tag	Access Essentials to Advantage Upgrade SIA 10G 1-35 month term
ESS-ADN-AC-10G-S5	1 ADV SIA 3 Tag	Access Essentials to Advantage Upgrade SIA 10G 3-5 yrs

Guidelines

These are the guidelines for deploying the license on NCS 540 Series routers.

- Starting with Release 24.3.1, tracking licenses are no longer used.
- If you are using Layer 3 VPN features with VRF, then licenses vary depending the VRF tables.

Table 4: Software Features and License Usage

If Software Feature is	and Configuration is	then use License
Layer 3 VPN with VRF or VRF-Lite	Less than (or equal to) eight VRF tables	ESS-AC-10G-RTU-1
	More than eight VRF tables	ADV-AC-10G-RTU-1

Software Innovation Access

Software Innovation Access (SIA) subscription are FCM licenses that provide access to your network's latest software upgrades and features. SIA licenses enable the consumption of Right-to-Use (RTU) licenses for your devices to access software innovation and avail support for your devices throughout the term of subscription.

Benefits of SIA Licenses

- **Access to software innovation:** provides access to continuous software upgrades which contain latest features, security enhancements, and bug fixes for all your devices at a network level.
- **Pooling of licenses:** enables Right-to-Use (RTU) licenses to be shared across your FCM network from a common license pool through the virtual account.
- **Protects your investment:** enables the portability of perpetual RTU licenses purchased for your current device to a next-generation router when you expand or upgrade your network.

Types of SIA Licenses

The types of SIA licenses are

- Essential SIA license
- Advantage SIA license

SIA License Term

The initial term of a SIA subscription is for a term of three years. You can renew the subscription by contacting your Cisco account representative. An equal number of SIA licenses and corresponding RTU licenses are required to enjoy the benefits, and ensure that your network is in compliance.

If your device is in a state of SIA Out-of-Compliance (OOC) the benefits cease.

Managing SIA Entitlements

SIA entitlement management manages software upgrades for FCM. Software upgrades are possible when the device is in an In-Compliant State.

The table shows the SIA Compliance factors and its states.

Table 5: SIA Compliance and SIA States

Compliance	SIA In-Compliance State	SIA Out-of-Compliance State
License Usage Consumption	The device consumes fewer licenses than purchased.	The number of SIA licenses consumed exceeds the number of SIA licenses purchased. OOC can also occur when the RTU licenses consumed is higher than the number of SIA licenses purchased.
Reporting	The device reports regularly.	The term of the SIA license expires and you haven't renewed the subscription.
Grace Period	NA	The SIA License <i>Grace</i> period of 90 days expires.

Compliance	SIA In-Compliance State	SIA Out-of-Compliance State
License Authorization Status	NA	License Authorization Status is: <ul style="list-style-type: none"> • Not Authorized: The license authorization code doesn't contain sufficient counts for the request. This can occur when you attempt to use more licenses than the licenses available in your Virtual Account. • Authorization Expired: The device hasn't been able to connect to CSSM for an extended period, due to which the authorization status couldn't be verified.

When the device enters an OOC state, a grace period of 90 days (cumulative of all the previous occurrences) begins. During this period, SIA license benefits can still be availed. The system attempts to renew the authorization period by connecting with the CSSM during the grace period, or even after the grace period has expired. If an attempt isn't successful, it remains in an OOC state. If the attempt is successful, a new authorization period begins and the device is In-Compliance.

When are Software Upgrades Blocked?

A software upgrade for a device is blocked in these situations.

- Software upgrades are blocked for all devices in the product family in the virtual account when the devices are Out-of-Compliance.
- Software upgrades are blocked when the device does not report within 90 days.

Usage Guidelines for Device Compliance

These are the guidelines for device compliance.

Table 6: Device Compliance

If...	Then...
the SIA license Grace period has expired	register your device with CSSM.
the SIA license has expired or the number of SIA licenses consumed is more than the number of SIA licenses that are purchased	contact your Cisco Account Representative to purchase or renew the required license.
the authorization code has insufficient counts for the request	generate the code with sufficient counts.
the authorization has expired	connect the device with CSSM.

Verify the Compliance Status

Verify the device compliance status, using the **show license platform summary** command.

Examples

Status: In-Compliance

```
Router# show license platform summary

FCM	Access Advanced SIA per 10G	7	0

Achieving and Maintaining Network Licenses Compliance

To ensure network compliance, it is important to use a quantity less than or equal to the total amount of perpetual (RTU) licenses and subscription (SIA) licenses, and report license usage regularly.

The benefits of maintaining network compliance include license pooling, portability of RTU, and access to software upgrades. If the network is out of compliance (OOC), these benefits are restricted.

Network compliance is measured at the virtual account level and enforced based on the product family. For example, consider a virtual account that contains ASR 9000 devices and NCS 540 devices. In this example, the NCS 540 devices are compliant, but one of the ASR 9000 devices uses more SIAs than that are available in the Smart account. Once all granted grace periods are exhausted, the enforcement conditions such as no license pooling, no RTU portability, and software upgrade restriction for all ASR 9000 devices within that virtual account are instituted. In this example, the NCS 540 devices in the same virtual account aren't impacted by the OOC condition, nor are the other ASR 9000 devices that reside in different virtual accounts.

A product family in a virtual account is considered in compliance when four factors are valid:

1. The devices are registered with the smart licensing server (On-Prem or CSSM).
2. The number of current SIA licenses in use is less than or equal to the number of available SIA licenses in your virtual account.
3. The number of current RTU licenses in use is less than or equal to the number of available RTU licenses in your virtual account.
4. The devices are reporting license usage within 90 days.

Thus, network compliance for a product family in a given virtual account is present when all devices are using no more RTUs & SIAs that have been purchased, and those devices are reporting usage at least every 90 days.

Revision History

Table 7: Feature History Table

Feature Name	Release Information	Feature Description
Smart Licensing Using Policy support on N540-24Q2C2DD-SYS	Release 25.1.1	Smart Licensing Using Policy support is now extended on the following Cisco NCS 540 router variant: <ul style="list-style-type: none"> • N540-24Q2C2DD-SYS
Smart Licensing Using Policy	Release 24.1.1	Cisco Smart Licensing Using Policy (SLP) is an enhancement to the existing Cisco Smart Licensing model. It streamlines the licensing process for Cisco IOS XR products by introducing a more flexible and automated approach. With SLP, you no longer need to register your device during installation, and there is no evaluation license state or period.
Cisco Smart Licensing on QDD-400G-ZR-S, QDD-400G-ZRP-S, and DP04QSDD-HE0 Optics	Release 7.10.1	Support for Smart Licensing is now extended to the hardware having following optics: <ul style="list-style-type: none"> • QDD-400G-ZR-S • QDD-400G-ZRP-S • DP04QSDD-HE0
Flexible Consumption Model Licenses	Release 7.9.1	Support for Flexible Consumption Model (FCM) is now extended to the following Cisco NCS 540 variant: <ul style="list-style-type: none"> • N540-6Z18G-SYS-A/D

Feature Name	Release Information	Feature Description
Flexible Consumption Model Licenses	Release 7.4.1	Smart Licensing support is now extended on the following Cisco NCS 540 router variants: <ul style="list-style-type: none"> • N540X-4Z14G2Q-A • N540X-4Z14G2Q-D • N540-24Q8L2DD-SYS
Flexible Consumption Model Licenses	Release 7.4.1	Support for Flexible Consumption Model (FCM) is now extended to the following Cisco NCS 540 variants: <ul style="list-style-type: none"> • N540X-4Z14G2Q-SYS-A • N540X-4Z14G2Q-SYS-D
Flexible Consumption Model Licenses	Release 7.4.1	Support for Flexible Consumption Model (FCM) is now extended to the following Cisco NCS 540 variants: <ul style="list-style-type: none"> • N540-24Q8L2DD-SYS
Essential and Advantage smart licenses in a combined entitlement	Release 7.4.1	With this release, the Advanced licenses are now referred to as the Advantage licenses, without essential entitlement. Also, a new license model – Advantage with Essentials, has been introduced that contains both Essential and Advantage licenses as a combined entitlement in a single PID. This simplifies the license procurement and management effort by eliminating the need to procure separate PIDs for Essential and Advantage licenses.
Software Innovation Access	Release 7.3.1	SIA license grants you access to the latest software upgrades which contain new features, bug fixes, and security enhancements for devices on your network. Also, it enables the consumption of Advantage and Essential Right-to-Use (RTU) licenses on your device, and allows portability of these RTU licenses from one device to another.
Licensing Solutions and Offerings	Release 7.3.1	Specific License Reservation is a solution designed for classified environments that don't allow electronic communication in or out of the environment.
Smart Licensing	Release 6.3.2	Smart Licensing is a cloud-based, flexible software licensing model that enables you to activate and manage Cisco software licenses across their organization. Smart Licensing solution allows you to easily track the status of your license and software usage trends.
