## **OVERVIEW**

The UCS C245 M6 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 2U form factor with the addition of the AMD CPUs, 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with individual DIMM capacity points up to 256 GB. The maximum memory capacity for 2 CPUs is 8 TB (for 32 x 256 GB DDR4 DIMMs). The C245 M6 SFF server has:

- Up to 24 front SFF SAS/SATA HDDs or SSDs (optionally up to 4 of the drives can be NVMe)
- I/O-centric option provides up to 8 PCie slots using three rear risers, or
- Storage-centric option provides three rear risers with a total of up to 4 NVMe SFF drives and 3 PCIe slots

The server provides internal slots for the following:

- One Cisco 12G SAS RAID controllers with 4 GB cache backup to control SAS/SATA drives, or
- Cisco 12G SAS HBAs to control SAS/SATA drives

NOTE: PCIe drives are controlled directly from the CPUs.

The UCS C245 M6 server has a single 1 GbE management port. A modular LAN on motherboard (mLOM)/OCP 3.0 module provides up to two 100 GbE ports. A connector on the front of the chassis provides KVM functionality.

The Cisco UCS C245 M6 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

See Figure 1 on page 6 for front and rear views of the UCS C245 M6 server.

#### Figure 1 Cisco UCS C245 M6 SFF Rack Server

24 Front drives are SAS/SATA and NVMe mix (up to 4 NVMe drives) and optionally 4 NVMe rear drives

#### Notes:

- 1. Any CPU PID ending in "P" cannot be used in a 2-CPU system. They can only be used in a 1-CPU system
- 2. If higher or lower speed DIMMs are selected than what is shown in *Table 6 on page 19* for a given CPU speed, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.

CAUTION: For systems configured with processors operating above 28° C [82.4° F], a fan fault or executing workloads with extensive use of heavy instructions sets may assert thermal and/or performance faults with an associated event recorded in the System Event Log (SEL).

If an NVIDIA A10, or A100 GPU is installed, or rear HDDs are installed, the 28° C [82.4° F] restriction changes to 25° C [77° F]

#### **Approved Configurations**

#### (1) For the UCSC-C245-M6SX:

- For 1-CPU systems, select one CPU from *Table 5 on page 16*. The server is shipped by default with riser 1 only
- For 2-CPU systems, select two identical CPUs from *Table 5 on page 16*.

#### NOTE:

- You cannot have two CPUs ending in a "P" suffix in a two-CPU configuration.
- If you configure a server with one CPU with a "P" suffix, you cannot later upgrade to a 2-CPU system with two of these CPUs.

#### **Caveats**

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - STEP 4 SELECT MEMORY, page 19
  - STEP 5 SELECT DRIVE CONTROLLERS, page 24
  - STEP 6 SELECT DRIVES, page 27
  - STEP 7 SELECT OPTION CARD(s), page 31

#### **STEP 4 SELECT MEMORY**

The available memory main characteristics for the C245 M6 SFF are as follows:

■ Clock speed: 3200 MHz

■ Ranks per DIMM: 1, 2, 4, or 8

Operational voltage: 1.2 V

■ Registered ECC DDR4 DIMMS (RDIMMs) or Load-reduced DIMMs (LRDIMMs).

Memory is organized with eight memory channels per CPU, with one or two DIMMs per channel (DPC).

#### **Select DIMMs**

The supported memory DIMMs are listed in Table 6.

#### (2) Two CPU (CPU1 and CPU2) population

- Select 8,12,16,20,24,28,32 DIMMs for the 2 CPUs system.
- 8 DIMMs for 2 CPUs system configuration is only allowed if the 16 channels cannot be populated, and only with processors that have 128MB L3 cache or less.

The DIMMs will be placed by the factory as shown in the following tables.

Total DIMM number per system	CPU 1 DIMM Placement in Channels (for identically ranked DIMMs)	CPU 2 DIMM Placement in Channels (for identically ranked DIMMs)

32	(C2, D2); (G2, H2); (A2, E2); (B2, F2); (D1, E1); (B1, G1); (C1, F1); (A1, H1)	(C2, D2); (G2, H2); (A2, E2); (B2, F2); (D1, E1); (B1, G1); (C1, F1); (A1, H1)

**NOTE:** System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

Table 7 on page 22 and Table 8 on page 22 give the maximum DRAM speeds for various DIMM populations.

Table 7 Memory Speed for 1 DIMM Per Channel (1 DPC)

DIMM Type	DIMM Population	Maximum DRAM Frequency (MHz)
	DIMMO	
RDIMM	One rank	3200
KDIIWW	Two ranks	3200
LRDIMM	Four ranks	3200
LINDIIVVV	Eight ranks	3200

Table 8 Memory Speed for 2 DIMMs Per Channel (2DPC)

DIMM Type	DIMM Population		Maximum DRAM Frequency (MHz)
	DIMMO	DIMM1	
	One rank	One rank	2933
RDIMM	One rank	Two rank	2933
	Two rank	Two rank	2933
LRDIMM	Four ranks	Four ranks	2933
LINDIMUN	Eight ranks	Eight ranks	2933

#### **DIMM Rules**

#### ■ DIMM Mixing:

- Mixing different types of DIMM (RDIMM with any type of LRDIMM or 3DS LRDIMM with non-3DS LRDIMM) is not supported within a server.
- Mixing RDIMM with RDIMM types is allowed if they are mixed in same quantities, in a balanced configuration.
- Mixing 16 GB, 32 GB, and 64 GB RDIMMs is supported.
- 128 GB and 256 GB LRDIMMs cannot be mixed with other RDIMMs
- 128 GB non-3DS LRDIMMs cannot be mixed with 256 GB 3DS LRDIMMs
- General Population Order Guidelines:
  - For best performance, populate all eight memory channels for each CPU socket, with every channel having the same capacity.
  - Populate open channels before populating two DIMMs on a given channel.
  - In 2 DPC configurations where only one DIMM is populated on a channel, populate the DIMM socket physically farthest away from the processor.
  - Balance memory capacity per channel pair on a given CPU.
  - Balance memory capacity per CPU socket in a two-socket system.
  - DIMMs within the same channel must be of the same base DIMM module type (all RDIMM, LRDIMM, or 3DS).
  - DIMMs within the same channel must be of the same DRAM density.
  - All memory channels operate at the same frequency. The system will use the highest common supported frequency when populated with different speed DIMMs. The highest common supported speed is the rated speed of the slowest DIMM in the system while also applying the population speed limits for the configuration (1 of 1, 1 of 2, 2 of 2).

#### STEP 5 SELECT DRIVE CONTROLLERS

The following list summarizes how drives are controlled on the server:

- SAS/SATA drives are controlled through a Cisco M6 12G RAID controller, or
- SAS/SATA drives are controlled through one or two Cisco 12G SAS HBAs
- NVMe PCIe drives are controlled directly from the CPUs

#### Cisco M6 12G SAS RAID Controller

This RAID controller supports up to 24 SAS or SATA drives operating at 3 Gbs, 6 Gbs, and 12 Gbs. It includes a SuperCap for a 4 GB flash-back write cache (FBWC) and supports RAID 0, 1, 5, 6, 10, 50, 60, SRAID0, and JBOD mode. The RAID controller plugs directly into a dedicated slot.

**NOTE:** 64 RAID groups (virtual drives) are supported with this RAID controller.

#### Cisco 12G SAS HBA

This HBA supports up to 16 SAS or SATA drives operating at 3 Gbs, 6 Gbs, and 12Gbs. It supports JBOD or pass-through mode (not RAID) and plugs directly into a dedicated slot. Two of these HBAs are required to control 24 drives.

## **RAID Volumes and Groups**

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For the Cisco M6 12G RAID controller, use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

#### **Select RAID Controller Options**

Select one of the following:

- Cisco 12G SAS RAID controller (see *Table 9*), or
- Cisco 12G SAS HBA (see *Table 9*)

NOTE: vSAN HCL listed/qualified component is UCSC-SAS-M6T (UCSC-SAS-240M6).

**NOTE:** Cisco uses solid state drives from a number of vendors. All solid state drives are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.

#### Notes:

- 1. Operating Systems that support 4k sector size drives are as follows:
  - CentOS 7.9/8.2/8.3 (and later), Windows Server 2016/2019 (and later)
  - Red Hat Enterprise Linux 7.9/8.2 (and later), SUSE Linux Enterprise Server 15.2 (and later)
  - ESXi 6.7 U3/7.0 U2 (and later)
  - See this link for operating system guidance: https://ucshcltool.cloudapps.cisco.com/public/
  - UEFI Mode must be used when booting from 4K sector size drives (legacy mode is not supported).
  - Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.
- 2. Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI)
- 3. Targeted for read centric IO applications. Supports endurance of 1 DWPD (drive write per day). Target applications are boot, streaming media, and collaboration.
- 4. Except HGST, Intel and WD NVMe drives can be mixed.

#### NOTE:

- When you order front-facing NVMe drives with or without raid controller (UCSC-RAID-M6SD), an NVMe cable (PID: CBL-SDFNVME-245M6) is included along with the drives.
- When you order front-facing NVMe drives with dual SAS HBAs (UCSC-SAS-240M6), an NVMe cable (PID: CBL-FNVME-245M6) is included along with the drives.
- If you decide to add front-facing NVMe drives later, you may need to order the drives as spare and also an NVMe cable (PID: CBL-SDFNVME-245M6= or CBL-FNVME-240M6=). Spare NVMe cables supports depends on the drive controller installing/installed in the system. this each PID includes two cables:
  - This cable plugs into NVMe-C on MB side, and NVMe-C on BP side and controls drives 1-2.
  - This cable plugs into NVMe-B on MB side, and NVMe-D on BP side and controls drives 3-4.

See for SPARE PARTS, page 81 section for all the spare components and required other parts with it.

#### **Caveats**

- Front SFF NVMe drives are connected directly to CPU2, and are not managed by any drive controller.
- If you order any front SFF NVMe drives, you must also order two CPUs.
- The rear NVMe drives are controlled directly from the CPUs.
- The rear NVMe drives are not bootable.
- If you order 3 or 4 NVMe drives, you must also order two CPUs
- SFF NVMe drives are bootable in UEFI mode only.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using a Cisco M6 12G SAS RAID controller or Cisco 12G SAS HBA.
- SED drives can be mixed with the non-SED drives in *Table 10 on page 27*

#### **Caveats**

#### ■ For 1-CPU systems:

- Only PCIe slots 1, 2, and 3 on PCIe riser 1A are available for a 1-CPU system.
- The PCIe slots on riser 2 are not supported on 1-CPU systems. The riser 2 slots are full-height PCIe slots 4, 5, and 6 (see *Figure 3 on page 8*). These are the slots in the middle when looking at the rear of the server. Slot 4 is the bottom slot.
- The PCIe slots on riser 3 are not supported on 1-CPU systems. The riser 3 slots are full-height PCIe slots 7 and 8 (see *Figure 3 on page 8*). These are the slots on the right when looking at the rear of the server. Slot 7 is the bottom slot.
- Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slots 1, 2, or 3 of riser 1A.
- You can order an mLOM VIC card to be installed in the mLOM/OCP 3.0 slot internal to the chassis and thus have two VIC cards in operation at the same time. If you order a GPU, it must be installed in slots as specified in *Table 11 on page 31*. See *Table 11 on page 31* for the selection of plug-in and mLOM VIC cards. For 2-CPU systems:
- The following PCIe slots are available:
  - Three on PCIe riser 1A (PCIe slots 1, 2, and 3),
  - Three on PCIe riser 2A (PCIe slots 4, 5, and 6),
  - Two on PCIe riser 3A (PCIe slots 7 and 8).
- Two plug-in PCIe VIC cards can be installed in dual CPU systems, using slots 2 and 5.
   In addition, you can order an mLOM VIC card, which is installed in the mLOM/OCP
   3.0 slot inside the chassis and thus have three VIC cards in operation at the same

- time. See *Table 11 on page 31* for the selection of plug-in and mLOM VIC cards. See also *Table 1 on page 10* and *Serial Port Details*, page 80 for the PCIe slot physical descriptions.
- If GPUs are installed in slot 2 of riser 1A or slot 5 of riser 2A, the NCSI capability automatically switches over to slot 1 of riser 1A or slot 4 of Riser 2A. Therefore, Cisco PCIe VICs can be installed in slots 1 and 4 if GPUs are installed in slots 2 and 5.
   If you order multiple GPUs, they must be installed as shown in *Table 11 on page 31*.
- The server supports up to two PCIe Cisco VICs plus an mLOM VIC
  - However, single-wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the mLOM/OCP 3.0 slot, then slot 2, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C245 M6 server, but are not sold on the Cisco price list, check the Hardware Compatibility List at this link

http://www.cisco.com/en/US/products/ps10477/prod\_technical\_reference\_list.html

#### STEP 8 ORDER OPTIONAL PCIE OPTION CARD ACCESSORIES

- These optics and cables have been tested for compatibility and are approved for use with Ethernet Network Adapter (as of the time of this publication). For the latest update, check the and consult Cisco Compatibility Matrix at <a href="https://tmgmatrix.cisco.com">https://tmgmatrix.cisco.com</a>.

#### **STEP 10 ORDER POWER SUPPLY**

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 C-series servers. Each power supply is certified for high-efficiency operation and offer multiple power output options. This allows users to "right-size" based on server configuration, which improves power efficiency, lower overall energy costs and avoid stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

Table 18 Power Supply

Product ID (PID)	PID Description

UCSC-PSU1-2300W	2300W Power supply for C-series servers		
UCSC-PSU1-1050ELV	1050W AC Power Supply for Rack Server Low Line		

#### Notes:

1. The 2300 W power supply uses a different power connector that the rest of the power supplies, so you must use different power cables to connect it. See *Table 19 on page 42* and *Table 20 on page 45*.

**NOTE:** In a server with two power supplies, both power supplies must be identical.

#### **Caveats**

- For PSUs with a high line input (220 VAC):
  - For 1050W AC PSUs:
    - For 1-CPU systems, a minimum of 2 PSUs is required
    - For 2-CPU systems with each CPU >180W and 2 or more GPUs, this PSU cannot be used
  - For 1050W DC PSUs:
    - For 1-CPU systems, a minimum of 2 PSUs is required

    - For 1-CPU systems, a minimum of 2 PSUs is required
    - For 2-CPU systems, this PSU cannot be used

### **STEP 11 SELECT INPUT POWER CORD(s)**

Using *Table 19* and *Table 20*, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

**NOTE:** *Table 19* lists the power cords for servers that use power supplies less than 2300 W. *Table 20* lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

# STEP 12 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

#### Select a Tool-less Rail Kit

Select a tool-less rail kit (or no rail kit) from Table 21.

Table 21 Tool-less Rail Kit Options

Product ID (PID)	PID Description
UCSC-RAIL-M6	Ball bearing rail kit
UCSC-RAIL-NONE	No rail kit option

NOTE: Cisco recommends a minimum quantity of 1 Rail Kit.

#### Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use *Table 22* to order a cable management arm.

Table 22 Cable Management Arm

Product ID (PID	)	PID Description
UCSC-CMA-C240	M6	Reversible CMA for ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the Cisco UCS C245 M6 Installation and Service Guide at this URL:

https://www.cisco.com/content/en/us/td/docs/unified\_computing/ucs/c/hw/c245m6/install/c245m6.html

**NOTE:** If you plan to rackmount your UCS C245 M6 server, you must order a tool-less rail kit. The same rail kits and CMAs are used for M5 and M6 servers.

### **STEP 13 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)**

By default, the C245 M6 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in *Table 23*. In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

https://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/c225m6/install/c225m6/m\_maintaining-the-server.html#Cisco\_Concept.dita\_cbad6f92-209d-4d56-986a-bbbc7ae6ba44

**NOTE:** If OCP PID UCSC-O-ID10GC is selected then must also select VIC PID (UCSC-PCIE-C100-04, UCSC-PCIE-C25Q-04)

## **STEP 14 SELECT SERVER BOOT MODE (OPTIONAL)**

By default, the C245 M6 SFF server ships with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID from *Table 24*.

Table 24 Server Boot Mode Ordering Information

### **STEP 15 ORDER SECURITY DEVICES (OPTIONAL)**

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in *Table 25*.

Table 25 Security Devices

Product ID (PID)	PID Description	
UCSX-TPM2-002B-C	Trusted Platform Module 2.0 for UCS servers	
UCSC-INT-SW02	Chassis Intrusion Switch	
UCSX-TPM-OPT-OUT	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified <sup>1</sup>	

#### Notes:

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

#### NOTE:

- The TPM module used in this system conforms to TPM v2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

# **STEP 16** SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from *Table 26*.

#### Table 26 Locking Bezel Option

Product ID (PID)	Description
UCSC-BZL-C240M5	Security Bezel

### STEP 17 ORDER M.2 SATA SSDs (OPTIONAL)

Order one or two matching M.2 SATA SSDs (see *Table 27*) along with a boot-optimized RAID controller (see *Table 28*). See *Figure 5 on page 68* for the location of the extender board connector on the motherboard. The motherboard extender board connector accepts the extender board and the extender board accepts the boot-optimized RAID controller.

Each boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs shown in *Table 27*. Order one or two M.2 SATA SSDs from *Table 27* 

**NOTE:** It is recommended that M.2 SATA SSDs be used as boot-only devices.

#### Table 27 M.2 SATA SSDs

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD

Order the Boot-Optimized RAID controller from *Table 28*. The Boot-Optimized RAID controller plugs into the extender board and holds up to two M.2 SATA drives.

**NOTE:** The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems

#### Table 28 Boot-Optimized RAID Controller

Product ID (PID)	PID Description
UCS-M2-HWRAID	Cisco Boot optimized M.2 RAID controller (holds up to two M.2 SATA SSDs)

#### NOTE:

- The UCS-M2-HWRAID boot-optimized RAID controller supports RAID 1 and JBOD mode
- The UCS-M2-HWRAID controller is available only with 240 GB and 960 GB M.2 SSDs.
- (CIMC/UCSM) is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives
- The minimum version of Cisco IMC and Cisco UCS Manager that support this controller is 4.2(1) and later. The name of the controller in the software is MSTOR-RAID
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported
- Hot-plug replacement is not supported. The server must be powered off.

#### Caveats

 Order one or two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.

### **STEP 18 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE**

### Partner Support Service for UCS

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice. PSS is available to all Cisco PSS partners. The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

PSS for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. You can choose a desired service listed in *Table 37*.

#### **UCS Drive Retention Service**

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available).

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

### Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

#### Notes:

1. This part is included with the purchase of option or spare CPU or CPU processor kits.

Please refer to "Cisco UCS C245 M6 Server Installation and Service Guide" for installation procedures. See this link:

### REPLACING CPUs and HEATSINKS

**NOTE:** Before servicing any CPU, do the following:

- Decommission and power off the server.
- Slide the C245 M6 SFF server out from the rack.
- Remove the top cover.

CAUTION: CPUs and their sockets are fragile and must be handled with extreme care to avoid damaging pins. The CPUs must be installed with heatsinks and thermal interface material to ensure cooling. Failure to install a CPU correctly might result in damage to the server.

CAUTION: Always shut down the server before removing it from the chassis, as described in the procedures. Failure to shut down the server before removal results in the corresponding RAID supercap cache being discarded and other data might be lost.

#### To replace an existing CPU, follow these steps:

- (1) Have the following tools and materials available for the procedure:
  - T-20 Torx driver—Supplied with replacement CPU.
  - Thermal interface material (TIM)—Syringe supplied with replacement CPU.
- (2) Order the appropriate replacement CPU from Table 5 on page 16
- (3) Carefully remove and replace the CPU and heatsink in accordance with the instructions found in "Cisco UCS C245 M6 Server Installation and Service Guide," found at:

https://www.cisco.com/content/en/us/td/docs/unified\_computing/ucs/c/hw/c245m6/install/c245m6.html

#### To add a new CPU, follow these steps:

- (1) Have the following tools and materials available for the procedure:
  - T-30 Torx driver—Supplied with new CPU.
  - Thermal interface material (TIM)—Syringe supplied with replacement CPU.

- (2) Order the appropriate new CPU from Table 5 on page 16
- (3) Order one heat sink for each new CPU. Order PID UCSC-HSHP-245M6 unless you have installed a double-wide or A10 GPU. In that case, order PID UCSC-HSLP-245M6.
- (4) Carefully install the CPU and heatsink in accordance with the instructions found in "Cisco UCS C240 M6 Server Installation and Service Guide," found at:

https://www.cisco.com/content/en/us/td/docs/unified\_computing/ucs/c/hw/c245m6/install/c245m6.html

### UPGRADING or REPLACING MEMORY

**NOTE:** Before servicing any DIMM, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

#### To add or replace DIMMs, follow these steps:

- Step 1 Open both DIMM connector latches.
- Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot
- Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.
- Step 3 Press the DIMM connector latches inward slightly to seat them fully.
- Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.
