Skyus Connects Enel X's Smart Energy Solution

Skyus SC

Skyus DS2

Energy intelligence software provider Enel X is helping customers make the most of every kilowatt with its 24/7/365 network that connects enterprise customers, utility companies, and grid operators with real-time data on energy consumption. Enel X uses Inseego's cost-effective Skyus USB embeded modems to bring data from meters in the fields to its Network Operations Center (NOC).

Connected to utility meters at customer sites, Skyus USB modems provides the connection for Enel X data collectors, sending real-time energy information to the NOC. Enel X monitors energy consumption levels and in certain situations notifies customers of impending increases in demand on the grid. Energy data is used to help customers rein in energy costs and help utility companies reduce strain on the grid.

Skyus USB modem's industrial grade temperature range and durability enable it to thrive in extreme environments, making it ideal for the continuous operation Enel X requires. With the help of Skyus USB modems, Enel X's customers are able to identify waste, use less energy, and reduce environmental impact.

FOR SOLUTION SUPPORT CONTACT: Inseego at 800-683-4818

Key Features:

- Continuous 24/7 operation
- 8+ years between failure

- Enterprise grade security
- Industrial rated

- Lightweight and durable design
