PROMINENCE SERIES

LASER EDGEBANDING

All Lorell Prominence laminate products have laser edgebanding. The edgeband is heated with a laser beam and fused to the laminate board for a smooth, seamless finish.

Advantages of laser edge banding versus traditional glue application:

- 1.5 mm thick made of ABS
- Zero joint between the board and the edgeband
- Sealed from microbial contamination
- 25-year warranty applies to edgeband delamination
- Surfaces are easier to clean, which is the best way to eliminate viruses
- Greater resistance to moisture and impact versus 2.5 mm and 3 mm PVC edgebands.
