OVERVIEW

Cisco HyperFlex™ Systems unlock the full potential of hyperconvergence. The systems are based on an end-to-end software-defined infrastructure, combining software-defined computing in the form of Cisco Unified Computing System (Cisco UCS) servers; software-defined storage with the powerful Cisco HX Data Platform and software-defined networking with the Cisco UCS fabric that will integrate smoothly with Cisco Application Centric Infrastructure (Cisco ACI™). Together with a single point of connectivity and hardware management, these technologies deliver a preintegrated and adaptable cluster that is ready to provide a unified pool of resources to power applications as your business needs dictate.

The Cisco HyperFlex Express HX240C M6 All NVMe/All Flash/Hybrid Server Nodes extends the capabilities of Cisco's HyperFlex portfolio in a 2U form factor with the addition of the 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with DIMM capacity points up to 64 GB. The maximum memory capacity for 2 CPUs is listed here:

- 2 TB (32 x 64 GB DDR4 DIMMs)

There are three servers to choose from:

- **HXAF240C-M6SN-EXP (All NVMe)** (see [Figure 1 on page 4](#)):
 - Up to 24 front NVMe (only) drives.
- **HXAF240C-M6SX-EXP (All Flash)** (see [Figure 1 on page 5](#)):
 - Up to 24 front SFF SAS/SATA SSDs and NVMe caching drive.
- **HX240C-M6SX-EXP (Hybrid)** (see [Figure 1 on page 5](#)):
 - Up to 24 front SFF SAS/SATA HDDs and SSDs

Drive Controller

The server provides one or two internal slots (depending on the server type) for the following:

- Two slots for Cisco 12G SAS pass-through HBAs. Each HBA controls up to 16 SAS/SATA drives

NOTE: PCIe drives are controlled directly from the CPUs.

The HyperFlex Express HX240C M6 All NVMe/All Flash/Hybrid Server Nodes has two LOM ports (10Gbase-T LOM) and a single 1 GbE management port. A modular LAN on motherboard (mLOM) module provides up to two 100 GbE ports. A connector on the front of the chassis provides KVM functionality.

See [Figure 1 on page 4](#) for front and rear views of all the configurations of the HyperFlex Express HX240C M6 All NVMe/All Flash/Hybrid Server Nodes.

STEP 5 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 HyperFlex Express M6 servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

HXE-PSUV2-1050DC	Cisco HX Express 1050W -48V DC Power Supply for Rack Server
HXE-PSU1-2300W	Cisco HX Express 2300W AC Power Supply for Rack Servers

Notes:

1. The 2300 W power supply uses a different power connector than the rest of the power supplies, so you must use different power cables to connect it. See [Table 11 on page 36](#) and [Table 12 on page 39](#).

NOTE: In a server with two power supplies, both power supplies must be identical.

STEP 6 SELECT INPUT POWER CORD(s)

Using [Table 11](#) and [Table 12](#), select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYPWRCORD, no power cord is shipped with the server.

NOTE: [Table 11](#) lists the power cords for servers that use power supplies less than 2300 W. [Table 12](#) lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

Solution Support (SSPT)

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you’ve deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. Success Tracks (ST)

Success Tracks builds on the Smart Net Total Care and Solution Support offers as described above and provides access to the CX Cloud, a centralized, web-based portal which is a personalized connection to Cisco for accessing support, knowledge, insights, and recommendations from Cisco experts to maximize the value of Cisco assets. CX Cloud connects you with Cisco's global user base to share your expertise, exchange ideas, and discuss best practices.

With Level 1 Support Cisco provides resources that support running and maintaining Products. You will have access to “Ask the Experts” knowledge sessions. These sessions are led by solution specialists who teach best practices for operating Products. Access to CX Centers will be available 24x7 to help resolve Product issues with Solution Support; this access streamlines case management for solutions comprised of Cisco and Solution Support Alliance Partner products. In addition, you will have access to case information, up-to-date install base views, and e-learning courses.

You can choose a desired service listed in [Table 18](#).

UPGRADING or REPLACING MEMORY

NOTE: Before servicing any DIMM do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs, follow these steps:

Step 1 Open both DIMM connector latches.

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.
