

Statement of Volatility – Dell Pro 14 Plus Portable Monitor P1425

⚠ CAUTION: A CAUTION indicates either potential damage to hardware or erasure of data and tells you how to avoid the problem.

The P1425 Monitor contains both volatile and non-volatile components. Volatile components erase their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following non-volatile components are present on the P1425 Monitor system board.

Table 1. List of non-volatile components on system board

Description	Reference designator	Volatility description	User accessible for external data	Remedial action (action necessary to erase data)
System EEPROM	Storage of system setting (OSD)	Non-Volatile memory, 16 Kbit. For storage system setting.	No	Part place on Interface Board, it has hardware/software write protected.
System Flash ROM	Store of system firmware	Non-Volatile memory, 32 Mbit. For storage system firmware.	No	Part place on Interface Board, it has hardware/software write protected.
USB Type-C PD controller	Store of PD firmware	Non-Volatile memory. For storage PD firmware.	No	Part place on Interface Board, it has hardware/software write protected.

⚠ CAUTION: All other components on the system board erase data if power is removed from the system. Primary power loss (unplugging the power cord and removing the battery) destroys all user data on the memory (DDR4, 2667 MHz). Secondary power loss (removing the on-board coin-cell battery) destroys system data on the system configuration and time-of-day information.
