

EcoStruxure™ IT Advisor Mobile

(part of EcoStruxure IT Advisor 10.0 subscription)

Today's data centers are evolving rapidly but without a clear, up-to-date view of the environment, even simple changes can become complex, increasing the risk of downtime, inefficiency, and compliance issues.

EcoStruxure IT Advisor Mobile is a powerful application designed to modernize IT asset management in data centers. Included as part of the IT Advisor 10.0 subscription (for both hosted and SaaS), it combines Augmented Reality (AR), Digital Twin technology, and Artificial Intelligence (AI) to connect the physical and digital worlds, helping your teams work smarter, faster, and with confidence.

Key Benefits

Confidence in every decision

Gain an always-accurate, real-time view of your data center, eliminating discrepancies and enabling confident decision-making.

See your data like never before

Visualize assets and infrastructure directly on the data center floor with AR. No more guesswork or outdated documentation.

Do more in less time

Reduce manual tasks and speed up audits, asset capture, and updates, freeing your teams to focus on higher-value work.

Make every change count

Plan and implement moves, adds, and changes faster and reduce operational risk.

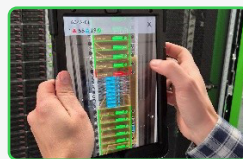

Capture and visualize your environment in real time:

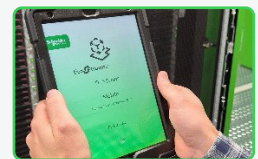

Manage digital twin of racks, assets, and dependencies

Keep your digital model continuously aligned with reality

Overlay live data on physical equipment using augmented reality

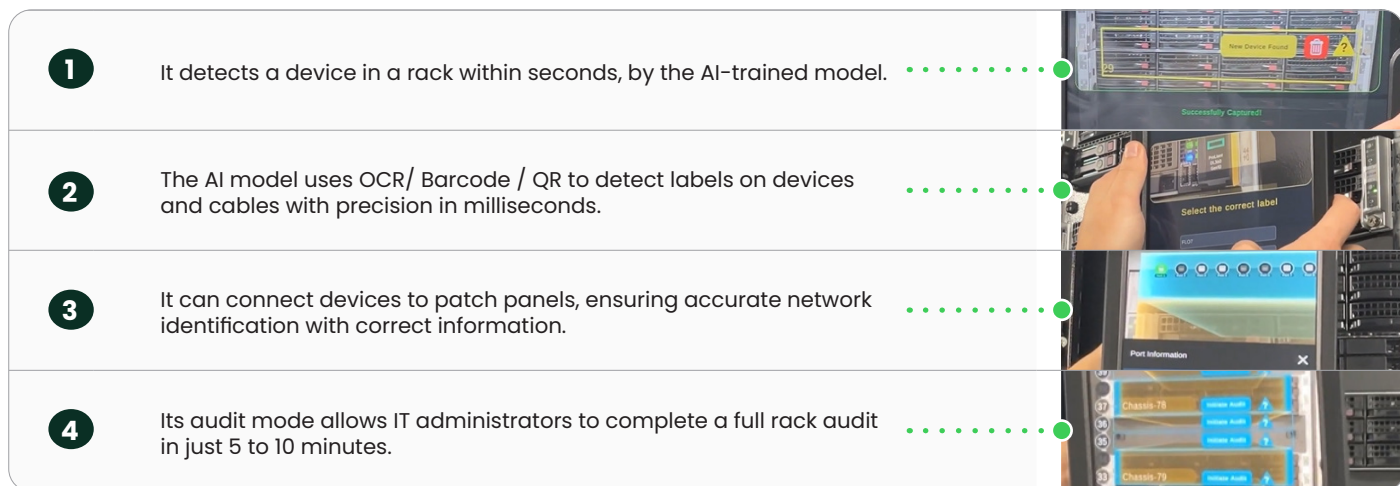

Seamlessly integrate with EcoStruxure IT Advisor

How IT Advisor Mobile works

Built for modern data center teams

Scenario	Challenge	How IT Advisor Mobile helps	Business impact
Manufacturing	Changes in racks go undocumented, making failures difficult to diagnose and halting production.	Rapid full rack scan in minutes with live asset visibility.	Faster troubleshooting, reduced downtime, minimized production loss.
Finance	Audit readiness is poor due to outdated spreadsheets and unreliable data.	Digital twin synced with DCIM for real-time, verifiable data.	Improved audit readiness, reliable compliance, reduced risk.
Managed Service Providers	Manual inventories slow delivery, require senior staff, and increase costs.	AI and AR enable faster asset capture by junior technicians with fewer errors.	Up to 3x faster execution, reduced errors, improved project margins.
Healthcare	Distributed IT rooms lack documentation, impacting security and compliance.	Centralized visibility with remote tracking of all changes and assets.	Better security, faster response times, improved compliance.
Operations and support	On-site visits are costly and time-consuming; troubleshooting takes too long.	AR-enabled remote support with live visibility and faster issue identification.	Reduced travel costs, faster resolution, improved efficiency.

Get Started

EcoStruxure IT Advisor Mobile App is available as part of **IT Advisor 10.0 subscription** and can be downloaded from the App Store and Google Play.

- Register via [mySchneider](#)
- After registration, you will receive an onboarding email with step-by-step instructions to access and begin using the app

Download the App now
