Warning: To prevent bodily injury, please ensure that the rack is installed in a structurally sound environment with a level floor and that all hardware has been assembled securely, and checked for stability before loading equipment. When installing equipment into the rack, start from the bottom of the rack first and move upwards, keeping the heaviest equipment at the bottom to avoid a situation where the rack becomes top-heavy.

Installation

1. Locate a suitable location in the rack/cabinet to mount the shelf - the shelf itself requires 1U of space.
2. If the rack uses square mounting holes, install cage nuts (not included) into the square mounting holes on the front posts of the rack.
3. Place the shelf into the rack and align the mounting points on the front brackets of the shelf with the mounting points on the rack (for example, cage nuts, if used).
4. Use the provided cabinet screws to secure the shelf to the rack. If you're not using cage nuts or M6 threaded rack posts, you should use the appropriate mounting hardware for the rack.
5. Make sure the screws are properly tightened and the shelf has no movement before attempting to place anything on the shelf. Be sure to observe the maximum weight capacity of the shelf.
