

EnGenius Cloud Switch Series

Multi-Gigabit Performance, Enterprise Features & Cloud Management

EnGenius Cloud Switch Series provides enterprise-class features for simplifying network configuration and monitoring for mid-size to large businesses. With advanced management, EnGenius switches enhance network performance to allow companies to focus on growing their business.

Simple — With easy-to-deploy design, EnGenius managed multi-gigabit & gigabit switches are operational within minutes. Organizations with limited IT support and budgets can create a reliable, efficiently managed network in no time.

Flexible — Choose the port and physical configuration that meets your network and space requirements for optimal performance. Select the management method most effective for the network – locally managed, remotely and locally managed, or cloud managed.

Reliable — EnGenius Cloud's reliable gigabit and multi-gigabit access for networked devices reduces delays that interrupt communications. EnGenius uses its decades of manufacturing and software development experience, long-lasting chipset vendor relationships, and tight manufacturing process to build reliable hardware.

Secure — With EnGenius Cloud, your network devices are protected with two-factor authentication and non-sequential serial numbers and MAC address verification to ensure only authorized cloud devices are on the network.

Features & Benefits

- Full-featured layer 2+ switching
- 8-48 10/100/1000/2500/5000/10000 Base-T GbE ports
- 802.3bt/at/af PoE++ ready on all ports with 55 - 740W PoE budgets
- 1-10 Gbps SFP+ extends connectivity and provides redundancy, and failover
- PoE extended mode extends PoE range up to 250 meters
- PD Lifeguard provides real-time detection and auto-reboot PoE power
- Continuous PoE power supplies PoE power even during switch upgrades
- Switch alert system so teams can be proactively notified of potential issues
- Quick-scan device register, remote monitoring, and troubleshooting
- Hybrid switch supports multiple management options

EnGenius now offers a 2 year factory warranty for all cloud products

Benefits to Help Grow Your Business

Increased Flexibility for Network Design

Select either 8-, 24-, or 48-multi-gigabit or gigabit ports and Power-over-Ethernet (PoE++)-ready Layer 2+ switches with 1-10 Gbps SFP+ ports. Cloud managed switch model options also include desktop and rack mountable, fanless, and SmartFan designs.

Enhanced Network Performance

EnGenius' full-featured Layer 2+ multi-gigabit and gigabit switches improve network speed and performance by controlling the available bandwidth speed for devices such as access points at the port level. By providing the available speed needed in areas where bandwidth needs vary such as conference rooms and lobbies, EnGenius switches provides faster overall network performance.

Optimized Network Devices

EnGenius switches allow businesses to optimize the installation and power management of network devices, such as Wi-Fi 6E wireless access points, AV controllers, PTZ cameras, digital signage, and lighting. By providing 802.3bt/at/af PoE++ power and data on all ports, companies can regulate power budgets according to device requirements and remotely power cycle individual ports.

Built-in Advanced PoE to Empower Surveillance

EnGenius provides reliable, high-quality video streaming at long distances to enable real-time monitoring and recovery of surveillance if the camera goes down, and to keep the power supply uninterrupted during switch firmware upgrades. EnGenius offers a series of switches with advanced PoE features designed for reliable, secure, high-tech surveillance.

High-Speed Gigabit with Fiber

The switch's 1 or 10 Gbps SFP+ slot options connect wired network segments throughout buildings extending beyond the limitations of Ethernet cabling. By reducing delays, businesses experience more consistent and uninterrupted communications.

Keep Up with Today's Technologies

High-performing access points supporting faster speeds and hundreds of concurrent users, now support 1, 2.5, 3.5, and 5 Gbps Ethernet connections. Multi-gig switches using existing cabling can support up to 1, 2.5, 5, and 10 Gbps per a port and automatically detect the speed needed by the connected end device. Utilize the higher PoE++ (802.3bt) standard on any port for the growing demand of high-powered devices like Wi-Fi 6E wireless access points, AV controllers, PTZ cameras, digital signage, and lighting.

Increased Access Control and Security

Protect the network with 802.1X port-based client authentication with dynamic VLAN and security through a RADIUS server. Utilizing Access Control Lists (ACLs), administrators can see who has access to network segments while screening traffic from unauthorized MAC or IP addresses. By establishing a guest VLAN to grant and limit internet resources for visitors, guests can use the network while also keeping the network secure.

Improved VLAN/Voice and Quality of Service

Automatically set up voice VLANs using LLDP-MED for IP phone in seconds. Segment the network by departments or traffic types for increased performance and security with 802.1Q VLAN, statically or dynamically. The 802.1p Class of Service prioritizes compliant VoIP and video traffic ensuring bandwidth intensive, time-sensitive data is forwarded immediately for clear, smooth voice and video delivery.

Minimize Truck-Rolls with In-Depth Visibility

Speed up tech support calls and minimize truck-rolls by quickly isolating issues with switch diagnostic tools. Remotely check cable continuity, port statistics, and device information all from a powerful diagnostic tool. The network topology view automatically maps the network deployment and displays device relationships across the infrastructure. No more manual tracking required – simply use network topology view to troubleshoot switches or access points directly from the cloud management interface. Grab high-level information by hovering over the device icon or click on details to take you right to the cloud device page.

Every Cloud Device is Secure and Protected by Advanced Authentication

With EnGenius Cloud, your network devices are protected with two-factor authentication, non-sequential serial numbers, and MAC address verification to ensure only authorized cloud devices are on the network. Once devices are authenticated, a secure tunnel is established between the device and the cloud management system with a unique certificate to encrypt transmissions.

Cloud Improves Setup, Registry and Device Management of Multi-Gig & Gigabit Switches

For quick and simple setup, manage your switches using EnGenius Cloud. Scan and assign switches into an organization and network for device registration and configuration using the EnGenius Cloud app. Simply refine configurations under the list view for switches in the switch's detail page after initial setup and registration.

EnGenius Cloud's dashboard provides a quick health check status of all your switches in an organization and network. Simply click on the switch picture from the dashboard to dive into detailed switch configurations and system information.

Conveniently & easily monitor and troubleshoot all of your network switches in one location. Quickly review switch list to compare resources and check overall configurations with other switches within the network. Further access individual switch information by (1) clicking detail view to get real-time meters and (2) configuring system and port settings for easy setup and fine tuning of switches.

Set maintenance schedules across times zones to improve up-time, enable remote system log to track system modifications or configuration changes, establish event-based email alerts, and receive push notifications via the EnGenius Cloud app.

Simplified Switch Management, Visibility, and Troubleshooting

By using multiple methods to manage switches, EnGenius decreases administration time through remote management, visibility, and troubleshooting. Select the most effective management approach based on network architecture, administrative permissions, technical aptitude, or even budget.

Locally Manage – manage each EnGenius switch in a standalone setup from its intuitive user interface that provides full access into all the Layer 2+ switching features.

Remote and Local Management – manage up to **100** EnGenius switches with the plug-and-play SkyKey device, which provides on-premises and subscription-free cloud network management capabilities.

Remote & Local Management – manage **1,000s** of EnGenius switches with ezMaster network software, an on-premises solution utilizing a virtual machine server or a private-cloud AWS account that easily configures and maintains multiple customer sites and thousands of devices via ezMaster network management software, all with no license or subscription fees.

Cloud Management – remotely or locally manage an unlimited number of EnGenius switches with EnGenius Cloud, a true license-free cloud management solution that provides quick deployment from anywhere, deep-dive analytics to review system performance, and custom device alerts through a simple to use smart phone app.
