This motherboard supports Wake from on Board LAN. To use this function, please make sure that the "Wake on Magic Packet from power off state" is enabled in Device Manager > Intel* Ethernet Connection > Power Management. And the "PCI Devices Power On" is enabled in UEFI SETUP UTILITY > Advanced > ACPI Configuration. After that, onboard LAN1 ~ LAN4 can wake up S5 under OS.

If you install Intel^{*} LAN utility or Marvell SATA utility, this motherboard may fail Windows^{*} Hardware Quality Lab (WHQL) certification tests. If you install the drivers only, it will pass the WHQL tests.

1.3 Unique Features

ASRock Rack Instant Flash is a BIOS flash utility embedded in Flash ROM. This convenient BIOS update tool allows you to update system BIOS without entering operating systems first like MS-DOS or Windows². With this utility, you can press the <F6> key during the POST or the <F2> key to enter into the BIOS setup menu to access ASRock Rack Instant Flash. Just launch this tool and save the new BIOS file to your USB flash drive, floppy disk or hard drive, then you can update your BIOS only in a few clicks without preparing an additional floppy diskette or other complicated flash utility. Please be noted that the USB flash drive or hard drive must use FAT32/16/12 file system.

Chapter 2 Installation

This is a SSI EEB form factor ($12'' \times 13''$, $30.5 \text{ cm} \times 33.0 \text{ cm}$) motherboard. Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it.

Make sure to unplug the power cord before installing or removing the motherboard. Failure to do so may cause physical injuries to you and damages to motherboard components.

2.1 Screw Holes

Place screws into the holes indicated by circles to secure the motherboard to the chassis.

Attention! Before installing this motherboard, be sure to unscrew and remove the standoff at the marked location, under the motherboard, from the chassis, in order to avoid electrical short circuit and damage to your motherboard.

Do not over-tighten the screws! Doing so may damage the motherboard.

2.2 Pre-installation Precautions

Take note of the following precautions before you install motherboard components or change any motherboard settings.

- 1. Unplug the power cord from the wall socket before touching any components.
- To avoid damaging the motherboard's components due to static electricity, NEVER place your motherboard directly on the carpet or the like. Also remember to use a grounded wrist strap or touch a safety grounded object before you handle the components.
- 3. Hold components by the edges and do not touch the ICs.
- 4. Whenever you uninstall any component, place it on a grounded anti-static pad or in the bag that comes with the component.
- 5. When placing screws into the screw holes to secure the motherboard to the chassis, please do not over-tighten the screws! Doing so may damage the motherboard.

Before you install or remove any component, ensure that the power is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, and/or components.

2.3 Installing the CPU and Heatsink

 Before you insert the CPU into the socket, please check if the PnP cap is on the socket, if the CPU surface is unclean, or if there are any bent pins in the socket. Do not force to insert the CPU into the socket if above situation is found. Otherwise, the CPU will be seriously damaged.

2. Unplug all power cables before installing the CPU.

nglish

 Before you installed the heatsink, you need to spray thermal interface material between the CPU and the heatsink to improve heat dissipation.

2. Illustration in this documentation are examples only. Heatsink or fan cooler type may differ.

2.4 Installation of Memory Modules (DIMM)

This motherboard provides twelve 288-pin DDR4 (Double Data Rate 4) DIMM slots in two groups, and supports Six and Dual Channel Memory Technology.

| Capacity | CPU1 | CPU2 |
|------------------|-----------------------------|-----------------------------|
| 256GB / 512GB | DDR4_A1, B1, C1, D1, E1, F1 | DDR4_G1, H1, I1, J1, K1, L1 |

- It is not allowed to install a DDR, DDR2 or DDR3 memory module into a DDR4 slot; otherwise, this motherboard and DIMM may be damaged.
- 2. For dual channel configuration, you always need to install identical (the same brand, speed, size and chip-type) DDR4 DIMM pairs.
- 3. It is unable to activate Dual Channel Memory Technology with only one or three memory module installed.
- 4. Some DDR4 IGB double-sided DIMMs with 16 chips may not work on this motherboard. It is not recommended to install them on this motherboard.

Recommended Memory Configurations

A single memory module should be installed in the socket which is nearest to the CPU.

| | documentation of the expansion card and make necessary hardware | | |
| | settings for the card before you start the installation. | | |

- Step 2. Remove the system unit cover (if your motherboard is already installed in a chassis).
- Step 3. Remove the bracket facing the slot that you intend to use. Keep the screws for later use.
- Step 4. Align the card connector with the slot and press firmly until the card is completely seated on the slot.
- Step 5. Fasten the card to the chassis with screws.
- Step 6. Replace the system cover.

2.6 Jumper Setup

The illustration shows how jumpers are setup. When the jumper cap is placed on the pins, the jumper is "Short". If no jumper cap is placed on the pins, the jumper is "Open". The illustration shows a 3-pin jumper whose pin1 and pin2 are "Short" when a jumper cap is placed on these 2 pins.

| Chassis ID0 Jumper (3-pin CHASSIS_ID0) (see p.7, No. 30) Chassis ID1 Jumper | 2_3 ○ ● ● 1_2 ● ● ○ | 2_3 ○ • • 1_2 • • ○ |

| SATA DOM Power Jumpers (3-pin SATAPWR1) (see p.7, No.27) | 1_2 ● ● ○ ○ SATA DOM (SSATA_2) requires 5V power supply | 2_3 SATA DOM (SSATA_2) does NOT require 5V power supply (Default) |
| (3-pin SATAPWR2) (see p.7, No.25) | 1_2 ● ● ○ ○ SATA DOM (SSATA_3) requires 5V power supply | 2_3 ○●● SATA DOM (SSATA_3) does NOT require 5V power supply (Default) |

Consult the documentation that comes with your SATA DOM and check whether or not Pin 7 requires 5V power supply.

If the connected SATA DOM requires 5V power supply, move the jumper caps placed on the SATA DOM Power Jumper (SATAPWR1 / SATAPWR2) from pins 2-3 (default) to pins 1-2.

If the connected SATA DOM does NOT require 5V power supply, connect the SATA DOM power cable to the SATA DOM power header (SATAPWR1 / SATAPWR2) and there is no need to change the default jumper setting of the SATA DOM Power Jumper (pins 2-3).

Warning! Incorrect setting of the SATA DOM Power Jumper (SATAPWR1 / SATAPWR2) may cause damage to the motherboard or your SATA DOM.

2.7 Onboard Headers and Connectors

Onboard headers and connectors are NOT jumpers. Do NOT place jumper caps over these headers and connectors. Placing jumper caps over the headers and connectors will cause permanent damage to the motherboard.

System Panel Header (9-pin PANEL1) (see p.7, No. 15)

Connect the power switch, reset switch and system status indicator on the chassis to this header according to the pin assignments. Particularly note the positive and negative pins before connecting the cables.

PWRBTN (Power Switch):

Connect to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch.

RESET (Reset Switch):

Connect to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

PLED (System Power LED):

Connect to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED is off when the system is in S4 sleep state or powered off (S5).

HDLED (Hard Drive Activity LED):

Connect to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

Auxiliary Panel Header (18-pin AUX PANEL1) (see p.7, No. 41)

This header supports multiple functions on the front panel, including the front panel SMB, internet status indicator and chassis intrusion pin.

A. Front panel SMBus connecting pin (6-1 pin FPSMB) This header allows you to connect SMBus (System Management Bus) equipment. It can be used for communication between peripheral equipment in the system, which has slower transmission rates, and power management equipment.

B. Internet status indicator (2-pin LAN1_LED, LAN2_LED) These two 2-pin headers allow you to use the Gigabit internet indicator cable to connect to the LAN status indicator. When this indicator flickers, it means that the internet is properly connected.

C. Chassis intrusion pin (2-pin CHASSIS)

This header is provided for host computer chassis with chassis intrusion detection designs. In addition, it must also work with external detection equipment, such as a chassis intrusion detection sensor or a microswitch. When this function is activated, if any chassis component movement occurs, the sensor will immediately detect it and send a signal to this header, and the system will then record this chassis intrusion event. The default setting is set to the CASEOPEN and GND pin; this function is off.

D. Locator LED (4-pin LOCATOR) This header is for the locator switch and LED on the front panel.

E. System Fault LED (2-pin LOCATOR) This header is for the Fault LED on the system.

Front VGA Header (15-pin FRNT_VGA1) (see p.7, No. 45)

Please connect either end of VGA_2X8 cable to VGA header.

Front and Rear Fan Connectors (4-pin FRNT_FAN1) (see p.7, No. 11) (4-pin FRNT_FAN2) (see p.7, No. 12) (4-pin FRNT_FAN3) (see p.7, No. 13) (4-pin FRNT_FAN4) (see p.7, No. 14) (4-pin REAR_FAN1) (see p.7, No. 55)

Please connect fan cables to the fan connectors and match the black wire to the ground pin. All fans support Fan Control.

ATX Power Connector (24-pin ATXPWR1) (see p.7, No. 5)

This motherboard provides a 24-pin ATX power connector. To use a 20-pin ATX power supply, please plug it along Pin 1 and Pin 13.

ATX 12V Power Connectors (8-pin ATX12V1) (see p.7, No. 4) (8-pin ATX12V2) (see p.7, No. 3) 1 GND 5 12V 8

This motherboard provides two 8-pin ATX 12V power connectors.

This connector supports Trusted Platform Module (TPM) system, which can securely store keys, digital certificates, passwords, and data. A TPM system also helps enhance network security, protects digital identities, and ensures platform integrity.

PWM Configuration Header (3-pin PWM_CFG1) (see p.7, No. 53)

This header is used for PWM configurations.

Serial General Purpose Input/Output Headers (7-pin SATA_SGPIO1) (see p.7, No. 33) (7-pin SATA_SGPIO2) (see p.7, No. 49) (7-pin SSATA_SGPIO1) (see p.7, No. 35)

The headers support Serial Link interface for onboard SATA connections.

Front Panel Audio Header (9-pin HD_AUDIO1) (see p.7, No. 47)

This header is for connecting audio devices to the front audio panel.

- High Definition Audio supports Jack Sensing, but the panel wire on the chassis must support HDA to function correctly. Please follow the instructions in our manual and chassis manual to install your system.
- 2. If you use an AC'97 audio panel, please install it to the front panel audio header by the steps below:

A. Connect Mic_IN (MIC) to MIC2_L.

- B. Connect Audio_R (RIN) to OUT2_R and Audio_L (LIN) to OUT2_L.
- C. Connect Ground (GND) to Ground (GND).

D. MIC_RET and OUT_RET are for the HD audio panel only. You don't need to connect them for the AC'97 audio panel.

E. To activate the front mic, go to the "FrontMic" Tab in the Realtek Control panel and adjust "Recording Volume". Virtual RAID On CPU Header (4-pin RAID_1) (see p.7, No. 52)

This connector supports Intel[®] Virtual RAID on CPU and NVME/AHCI RAID on CPU PCIE.

With the introduction of the Intel VROC product, there are three modes of operation:

| SKU | HW key required | Key features |
|----------------|-----------------|---|
| Pass-thru | Not needed | Pass-thru only (no RAID) LED Management Hot Plug Support RAID 0 support for Intel Fultondale NVMe SSDs |
| Standard | VROCSTANMOD | Pass-thru SKU featuresRAID 0, 1, 10 |
| Premium ISS | VROCPREMMOD | Standard SKU features RAID 5 RAID 5 Write Hole Closure |

*Only Intel SSDs are supported.

*For further details on VROC, please refer to the official information released by Intel.

2.8 Driver Installation Guide

To install the drivers to your system, please insert the support CD to your optical drive first. Then, the drivers compatible to your system can be auto-detected and listed on the support CD driver page. Please follow the order from top to bottom to install those required drivers. Therefore, the drivers you install can work properly.

2.9 Dual LAN and Teaming Operation Guide

Dual LAN with Teaming enabled on this motherboard allows two single connections to act as one single connection for twice the transmission bandwidth, making data transmission more effective and improving the quality of transmission of distant images. Fault tolerance on the dual LAN network prevents network downtime by transferring the workload from a failed port to a working port.

The speed of transmission is subject to the actual network environment or status even with Teaming enabled.

Before setting up Teaming, please make sure whether your Switch (or Router) supports Teaming (IEEE 802.3ad Link Aggregation). You can specify a preferred adapter in Intel PROSet. Under normal conditions, the Primary adapter handles all non-TCP/IP traffic. The Secondary adapter will receive fallback traffic if the primary fails. If the Preferred Primary adapter fails, but is later restored to an active status, control is automatically switched back to the Preferred Primary adapter.

Step 1

From Device Manager, open the properties of a team.

Step 2

Click the Settings tab.

Step 3

Click the Modify Team button.

Step 4

Select the adapter you want to be the primary adapter and click the **Set Primary** button.

If you do not specify a preferred primary adapter, the software will choose an adapter of the highest capability (model and speed) to act as the default primary. If a failover occurs, another adapter becomes the primary. The adapter will, however, rejoin the team as a non-primary.

2.10 M.2_SSD (NGFF) Module Installation Guide

The M.2, also known as the Next Generation Form Factor (NGFF), is a small size and versatile card edge connector that aims to replace mPCIe and mSATA. The M.2_SSD (NGFF) Socket 3 can accommodate either a M.2 SATA3 6.0 Gb/s module or a M.2 PCI Express module up to Gen3 x4 (32 Gb/s).

Installing the M.2_SSD (NGFF) Module

| No. | | 2 | | 4 |

| Module Type | Type2230 | Туре 2242 | Type2260 | Type 2280 |

EP2C621D12 WS

Step 3

Move the standoff based on the module type and length. The standoff is placed at the nut location D by default. Skip Step 3 and 4 and go straight to Step 5 if you are going to use the default nut. Otherwise, release the standoff by hand.

Step 4

Step 5

Gently insert the M.2 (NGFF) SSD module into the M.2 slot. Please be aware that the M.2 (NGFF) SSD module only fits in one orientation.

Step 6

Tighten the screw with a screwdriver to secure the module into place. Please do not overtighten the screw as this might damage the module.

Intel SpeedStep Technology

Intel SpeedStep technology allows processors to switch between multiple frequencies and voltage points for better power saving and heat dissipation. CPU turbo ratio can be fixed when Intel SpeedStep Technology set Disabled and Intel Turbo Boost Technology set Enabled.

Please note that enabling this function may reduce CPU voltage and lead to system stability or compatibility issues with some power supplies. Please set this item to [Disabled] if above issues occur.

Intel Turbo Boost Technology

Intel Turbo Boost Technology enables the processor to run above its base operating frequency when the operating system requests the highest performance state.

Long Duration Power Limit

Configure Package Power Limit 1 in watts. When the limit is exceeded, the CPU ratio will be lowered after a period of time. A lower limit can protect the CPU and save power, while a higher limit may improve performance.

Long Duration Maintained

Configure the period of time until the CPU ratio is lowered when the Long Duration Power

Limit is exceeded.

Short Duration Power Limit

Configure Package Power Limit 2 in watts. When the limit is exceeded, the CPU ratio will be lowered immediately. A lower limit can protect the CPU and save power, while a higher limit may improve performance.

Chapter 5 Troubleshooting

5.1 Troubleshooting Procedures

Follow the procedures below to troubleshoot your system.

Always unplug the power cord before adding, removing or changing any hardware components. Failure to do so may cause physical injuries to you and damages to motherboard components.

- 1. Disconnect the power cable and check whether the PWR LED is off.
- Unplug all cables, connectors and remove all add-on cards from the motherboard. Make sure that the jumpers are set to default settings.
- 3. Confirm that there are no short circuits between the motherboard and the chassis.
- 4. Install a CPU and fan on the motherboard, then connect the chassis speaker and power LED.

If there is no power...

- 1. Confirm that there are no short circuits between the motherboard and the chassis.
- 2. Make sure that the jumpers are set to default settings.
- 3. Check the settings of the 115V/230V switch on the power supply.
- 4. Verify if the battery on the motherboard provides ~3VDC. Install a new battery if it does not.

If there is no video...

- 1. Try replugging the monitor cables and power cord.
- 2. Check for memory errors.

If there are memory errors...

- 1. Verify that the DIMM modules are properly seated in the slots.
- 2. Use recommended DDR4 R DIMM/LR DIMM /NVDIMMs.
- 3. If you have installed more than one DIMM modules, they should be identical with the same brand, speed, size and chip-type.
- 4. Try inserting different DIMM modules into different slots to identify faulty ones.
- 5. Check the settings of the 115V/230V switch on the power supply.

Unable to save system setup configurations...

- 1. Verify if the battery on the motherboard provides ~3VDC. Install a new battery if it does not.
- 2. Confirm whether your power supply provides adaquate and stable power.

Other problems...

1. Try searching keywords related to your problem on ASRock Rack's FAQ page: http://www.asrockrack.com/support
