

SELLING TIPS FOR YEALINK USB HEADSETS

EMERGING TREND NEEDS FOR A STABLE AND PROFESSIONAL COMMUNICATION ENVIRONMENT

Over the last few decades, technology has evolved, working styles have become more diversified, and office spaces have become more complex. Knowledge workers, whether in an open workplace or working from home, confront the challenge of being distracted or interrupted by noise while focusing on their task, resulting in lower productivity. The diversity of office environments has also resulted in a greater requirement for distant collaboration. As a result, a dedicated headset is required for the great majority of knowledge workers in order to create a stable and professional communication environment.

YEALINK SOLUTION ENABLE EASY COLLABORATION FOR KNOWLEDGE WORKERS

Yealink has developed a series of USB headsets to enable easy collaboration for knowledge workers in a variety of work environments. It is primarily suited to workers who have high demands for expandability (including IP Phones and PCs) and stability, and who are not road warriors.

The UH series applied enhanced noise cancellation technology and achieved outstanding audio quality, lowering communication barriers. It also implemented busylight* to reduce distractions. And, with ongoing improvements to materials such as the ear cushions and headband, the UH Series provides improved wearing comfort, resulting in a stress-free all-day wearing experience.
