

ThinkSmart Core Gen 2 for Microsoft Team Rooms

Upgrade your meeting spaces with ThinkSmart Core Gen 2, the first AI-optimized device built for video conferencing room systems. Powered by the Intel® Core™ Ultra 5 or 7 processor with an integrated NPU, this device accelerates compute tasks and data transfer, optimizing AI performance and streamlining operations with up to 40% lower power consumption. Equipped with Windows 11 IoT, the device offers the flexibility to choose from a wide range of Teams Rooms-certified peripherals. For easy installation, it includes either the Lenovo IP Controller or the ThinkSmart Controller, ensuring compatibility with various room setups. Additionally, it supports BYOD mode, enabling users to host meetings from the laptop, regardless of the UC platform.

Purpose-built to improve productivity and collaboration

Combining innovative technology with personalized services, ThinkSmart solutions will improve the way employees work together in today's work-from-anywhere world.

The device is certified for Microsoft Teams Rooms and operates on Windows 11 IoT, delivering a premium meeting experience enhanced by Copilot and AI-driven features like IntelliFrame and intelligent speaker recognition. IntelliFrame automatically adjusts focus to frame individuals dynamically, promoting more natural and engaging interactions. Additionally, the intelligent speaker identifies participants by voice, enabling it to generate meeting notes for actionable summaries and follow-ups.

The versatile built-in cable management system secures wires in place or can be completely detached for a sleeker, more compact setup, and an integrated EDID management facilitates improved connectivity with room displays.

The integrated cable management system simplifies installation and maintenance, making it easier to add or remove cables as needed, ensuring a more efficient setup and reducing downtime for device upkeep.
