## IMPORTANT - PLEASE READ CAREFULLY

## Note

This documentation ("Documentation") provides information that will assist you in controlling your Printer PJ-8XX (where " 8 XX " is the model name).

You may use the Documentation only if you first agree to the following conditions.
If you do not agree to the following conditions, you may not use the Documentation.

## Condition of Use

You may use and reproduce the Documentation to the extent necessary for your own use of your Printer Model ("Purpose"). Unless expressly permitted in the Documentation, you may not;
(i) copy or reproduce the Documentation for any purpose other than the Purpose,
(ii) modify, translate or adapt the Documentation, and/or redistribute it to any third party,
(iii) rent or lease the Documentation to any third party, or,
(iv) remove or alter any copyright notices or proprietary rights legends included within the Documentation.

## No Warranty

a. Any updates, upgrades or alteration of the Documentation or Printer Model will be performed at the sole discretion of Brother. Brother may not respond to any request or inquiry about the Documentation.
b. THIS DOCUMENTATION IS PROVIDED TO YOU "AS IS" WITHOUT WARRANTY OF ANY KIND, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. BROTHER DOES NOT REPRESENT OR WARRANT THAT THIS DOCUMENTATION IS FREE FROM ERRORS OR DEFECTS.
c. IN NO EVENT SHALL BROTHER BE LIABLE FOR ANY DIRECT, INDIRECT, PUNITIVE, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER, ARISING OUT OF THE USE, INABILITY TO USE, OR THE RESULTS OF USE OF THE DOCUMENTATION OR ANY SOFTWARE PROGRAM OR APPLICATION YOU DEVELOPED IN ACCORDANCE WITH THE DOCUMENTATION.

## Introduction

This material provides the necessary information for directly controlling your printer.
This information is provided assuming that the user has full understanding of the operating system being used and basic mastery of communication interfaces in a developer's environment.
Read the model names that appear in the screens in this manual as the name of your printer.

We accept no responsibility for any problems caused by programs that you develop using the information provided in this material, affecting software, data or hardware, including the printer, and any problems resulting directly or indirectly from them. Use this material only if you accept these terms.

This material shall not be reproduced, in part or in full, without prior approval. In addition, this material shall not be used as evidence in a lawsuit or dispute in a way that is unfavorable towards our company.

These ESC/P Brother commands have been adapted specifically for this company.

## What is ESC/P?

ESC/P is one type of control codes used for printers. With the codes introduced in this document, various labels can be created and printed. In this document, ESC/P codes are provided as both ASCII and binary codes.

When sending codes to the printer, make sure that the binary codes are used, otherwise the printer cannot parse the codes.

## 1. Using ESC/P Brother Commands

Below is a description of the flow for creating documents.
Also refer to "2. Examples of Using ESC/P Brother Commands".

## (1) Start ESC/P

1. Switch the command mode. - Switch command mode (ESC i a 4) Note: ESC/P mode
2. Initialize - Initialize (ESC @)

## (2) Format settings

1. Select the orientation. - Specify landscape orientation (ESC i L)
2. Specify the page size. - Specify page length (ESC (C)
3. Specify print area. - Specify page format (ESC ( c)

- Specify left/right margins (ESC I, ESC Q)

4. Specify the line feed amount. - Specify line feed amount (ESC 0, ESC 2, ESC 3, ESC A)
5. Specify tab positions. - Specify horizontal tab position (ESC D)

- Specify vertical tab position (ESC B)

## (3) Print operations

1. Specify the print position. - Specify the vertical position (ESC ( v, ESC ( V, VT, ESC J)

- Specify the horizontal position (ESC \$, ESC $\backslash$, HT, ESC a)

2. Transfer the print data

- Transfer necessary text operation codes (see (4)), bit images, barcodes, and downloaded data (see (5))

3. End of the line. - Feed the paper (CR, LF)
4. Repeat 1-3 above.
5. End of the page. - Feed the page (FF)
6. Repeat 1-5 above.
7. End of the document.

## (4) Text operations

1. Specify the character set. - Select font (ESC k)

- Select character code (ESC t)
- Select international character set (ESC R)
- Specify character size (ESC X)
- Specify the character spacing (ESC P, ESC M, ESC SP)

2. Specify the character style. - Specify character style
(ESC 4, ESC 5, ESC E, ESC F, ESC G, ESC H, ESC W, SO, ESC SO, SI, ESC SI, DC2, DC4, ESC -, ESC !)
3. Specify character codes.

Repeat 1-3 above as necessary.
(5) Bit images, barcodes, and image data

1. Specify bit images.
2. Specify barcodes.
3. Specify 2D barcodes.
4. Print the downloaded data

- (ESC *, ESC K, ESC L, ESC Y, ESC Z)
- (ESC i B)
- (ESC i Q, ESC i V, ESC i D, ESC i M, ESC i J)
- (ESC iF P)

An image data has to be transferred and registered to the printer first.

## 2. Examples of Using ESC/P Brother Commands

## Set Basic setup first.

Basic set up : Specify ESC/P Brother command mode
ESC i a Switch command mode

| ASCII: | ESC | i | a | n |
| :--- | :--- | :--- | :--- | :--- |
| Decimal: | 27 | 105 | 97 | n |
| Hexadecimal: | 1 B | 69 | 61 | n |

Parameters
n : Command mode
0 or 48: ESC/P Legacy / Raster mode
3 or 51: P-touch Template mode
4 or 52 ESC/P Brother mode

Description

- Switches the command mode to ESC/P Legacy / Raster mode, P-touch Template mode and ESC/P Brother mode.
- Dynamically switches between the 3 modes
- Since this is a dynamic command, after the printer is turned off and on again, the setting returns to the previously setting.

This is the label that will be made.

In order to make this label, the following six steps are required.

## Step

1. Select the landscape orientation
2. Specify the horizontal position
3. Specify the vertical position
4. Select the font type
5. Specify the character size

## Step 1: Select the landscape orientation

ESCiL Specify landscape orientation

| ASCII: | ESC | i | L | n |
| :--- | :--- | :--- | :--- | :--- |
| Decimal: | 27 | 105 | 76 | n |
| Hexadecimal: | 1 B | 69 | 4 C | n |

## Parameters

$$
n=0,1 \text { or } 48,49
$$

## Entered command

## Description

- Applies or cancels the landscape orientation | $n=1$ or $49\left({ }^{(15}\right):$ Applies the landscape orientation. |
| :--- |
| $n=0$ or $48\left({ }^{(20}\right):$ Cancels the landscape orientation. |

ESCiL01h

- Using this command clears alltext.
- Before entering text, specify the paper orientation with this command.
- The setting specified by "ESC iXL2"(default landscape setting) is valid for the landscape orientation when the printer is turned on.

## Step 2: Specify the horizontal position.

ESC \$ Specify absolute horizontal position

|  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| ASCII: | ESC | $\$$ | n 1 | n 2 |
| Decimal: | 27 | 36 | n 1 | n 2 |
| Hexadecimal: | 1 B | 24 | n 1 | n 2 |$\quad 山$ At your side

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 255$
Description

- Specifies the absolute print position (in dots) for the next data.
- An absolute print position specifies the next print position as a number of dots from the left margin.
- n 1 and n 2 indicate the number of dots from the left margin.
(Number of dots=n1+n2*256)
- The dot spacing is calculated as $1 / 203$ inch.
- The maximum number of dots that can be specified with n 1 and n 2 depends on the media
- This command is available only with left alignment

1 inch=203 dots
Horizontal position=n1+n2*256=203
$\begin{array}{ll}11 & 11 \\ 203 & 0\end{array}$
CBh

Entered command n1 n2

ESC \$ CBh 00h

Example: A case 203dpi printer is used

## Step 3: Specify the vertical position.

ESC (V Specify absolute vertical position

| ASCII: | ESC | $($ | V | nL | nH | mL | mH |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Decimal: | 27 | 40 | 86 | nL | nH | mL | mH |
| Hexadecimal: | 1 B | 28 | 56 | nL | nH | mL | mH |

## Parameters

$n L=2$
$\mathrm{nH}=0$
$0 \leq m L \leq 255$
$0 \leq m H \leq 127$

## Description

- Specifies the vertical print position as an absolute position from the top margin position

## Vertical position $=\mathrm{mL}+\mathrm{mH} * 256+$ top margin

- The absolute vertical position is measured from the top margin position when this command was specified.
- If a position extending beyond the bottom margin is specified, printing starts.
- There is no restriction on the amount of movement back (upward) from the current position.
- With left alignment, the print position for the next line becomes the end position of the current line.
(The horizontal position does not move to the left margin.)
With right alignment and center alignment, the horizontal position moves to the beginning of the line
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.

1 inch=203 dots
Vertical position $=m L+m H^{*} 256=203$

## Entered command $\mathrm{nL} \quad \mathrm{nH} \quad \mathrm{mL} \quad \mathrm{mH}$

ESC (V02h 00h CBh 00h

Example: A case 203dpi printer is used

## Step 4: Select the font type.

ESC $\mathbf{k} \quad$ Select font

- The default value is $n=1$ (Letter Gothic Bold (fixed pitch)).
- If the font is changed from a bitmap font to outline font, the character size is changed to the default setting ( 28 dots).
- If the font is changed from an outline font to bitmap font, the character size is changed to default setting (24 dots).
- Propotional pitched Gothic is forced to be selected when a character assigned from $0 \times 80$ to $0 \times \mathrm{FF}$ in the Japanese character code table is used.
$\qquad$

```
n=11=0Bh
```

## Step 5: Specify the character size.

Description

- This command is used only to change the size.
- Outline must not be specified.
- The character width cannot be specified.
- The character size is specified as $n=n L+n H * 256$ dots.
- The width and the height are the same.
- With bitmap fonts, only $n=16,24$ and 32 are valid.
- With outline fonts, $\mathrm{n}=400$ is the maximum.
- The commands for specifying stretched characters, compressed characters and the character sbacing (SO, ESC W, ESC ! ESC SP) remain available.

Entered command man nH
ESC X 00h 64h 00h

Example: A case 203dpi printer is used

All commands together will make the example label shown below.

However, these commands should be converted to binary data before sent to the printer, as shown below. Here is the captured converted binary data.

$$
\begin{array}{llllllllllllllll}
1 \mathrm{~B} & 69 & 61 & 04 & 1 \mathrm{~B} & 40 & 1 \mathrm{~B} & 69 & 4 \mathrm{C} & 01 & 1 \mathrm{~B} & 24 & \mathrm{CB} & 00 & 1 \mathrm{~B} & 28 \\
56 & 02 & 00 & \mathrm{CB} & 00 & 1 \mathrm{~B} & 6 \mathrm{~B} & 0 \mathrm{~B} & 1 \mathrm{~B} & 58 & 00 & 64 & 00 & 41 & 74 & 20 \\
79 & 6 \mathrm{~F} & 75 & 72 & 20 & 73 & 69 & 64 & 65 & 0 \mathrm{C}
\end{array}
$$

When the printer receives above binary commands, the label shown below is printed.

## At your side

## 3. ESC/P Command Limitations

### 3.1 Print area

## [Paper types and sizes]

- Thermal cut paper: A4/Letter/Legal/A5/A5(Long Edge) sizes and any size
- Thermal roll paper: 210 mm (width)
* Any size is within a range of 101.6 - to $215.9-\mathrm{mm}$ wide and 50.8 - to $2540.0-\mathrm{mm}$ long.
[Print area]
The printable area differs depending on the paper type; however, with any paper listed above, the top margin, left margin are the same as with A4 paper. If the page length ( 8 -inch page width) has been specified, the length specified with ESC/P will be applied as the page length.

### 3.2 Characters

This system uses single-byte character codes and is installed with 6 bitmap fonts (Letter Gothic Bold, Helsinki, Gothic, Brussels, San Diego and Brougham) and 4 outline fonts (Letter Gothic, Brussels, Helsinki and Gothic).

Fixed pitch or proportional pitch can be specified for any of the fonts.
However, there are fonts that are better with a fixed pitch and fonts that are better with a proportional pitch. The fonts that are better with a fixed pitch are: Letter Gothic and Letter Gothic Bold Brougham.

The font that is better with a proportional pitch are: Brussels, Helsinki and Gothic San Diego.
Each bitmap font has three sizes or four sizes: 16 dots, 24 dots, 32 dots and 48 dots.
Please refer to section Appendix A:Specifications.

### 3.2.1 Character sizes

Each font is available in full size, compressed size (half width), double width, double height and half width, double height, and quadruple size.

The actual character size is slightly smaller than the nominal size (the parameter value received with the size command). This varies depending on the font.

| Nominal (dots) | 16 | 24 | 32 | 48 |
| :---: | :---: | :---: | :---: | :---: |
| Height (dots) | 15 | 21 | 28 | 44 |
| Width (dots) | 8 | 10 | 14 | 44 |

The above example is for Letter Gothic Bold (full size, no character styles applied).
The line-drawing characters $( \lrcorner \mathrm{L} \neq|-|+\tau\urcorner \Gamma$, etc.) and shaded characters have their own pitch regardless of the specified font and pitch (proportional or fixed) settings.

### 3.2.2 Character pitches

Pitch refers to the spacing between neighboring characters.
When characters are arranged with a fixed pitch, they will be evenly spaced.
If characters extend over several lines, they will align in straight rows.

Fixed spacing

Fixed spacing

When characters are arranged with a proportional pitch, the spacing will vary depending on the character. (For example, "W" is wide but " l " is narrow.)
As a result, the excess space between characters is eliminated and the text appears more compact.

Variable spacing

Variable spacing

If a fixed pitch is applied to a font that is better with a proportional pitch, all characters are given the same width as the widest character in the font.

Variable spacing

This makes it possible to evenly space the characters of a proportional-pitch font without having to change the font.

If a proportional pitch is applied to a font that is better with a fixed pitch, all characters are given the same width, appearing the same as with a fixed pitch.

### 3.3 Print position

The print position is the standard position for printing characters, bitmaps, and barcodes.
There is a horizontal print position and vertical print position, which are the reference points for vertical position movement and horizontal position movement.

### 3.3.1 Characters

Characters are arranged with their top edges aligned with the print position.
The baseline of each character is the bottom edge of the character, regardless of size, font, etc.

All characters on a single line are printed with a baseline positions that is the same for each character.
If a single line consists of characters with different heights, the characters are aligned with the baseline of the tallest character on the line.

Underlines are drawn 4 dots below the baseline position.

### 3.3.2 Bitmaps, barcodes and downloaded images

These types of image data are treated in the same way as characters and are printed with the bottom edge of the image aligned with the baseline.

### 3.4 Line feed amount

The amount of line feed is the amount of vertical movement from the print position of one line to the print position of the next line.

The line feed amount is specified with ESC 0, ESC 2, ESC A, and ESC 3.

- Within a single line of text, the tallest character is determined, and the baseline is moved so that the top edge of that character is at the vertical print position.
- The tallest character within a line becomes the line height.
- If characters are underlined, 4 dots are added to the line height.
- If the line height is greater than the specified line feed amount, the line height is used as the actual line feed amount.

In this way, even if the specified line feed amount is small, the upper and lower lines will not overlap.
(For printer-resident fonts.)

## 4. Control Code List

Character/style selection commands (Refer to section 5.1 Character/style selection commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC R | Select international character set |  |
| ESC q | Select character style |  |
| ESC $k$ | Select font |  |
| ESC $t$ | Select character code set |  |

Text printing commands (Refer to section 5.2 Text printing commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC 4 | Apply italic style |  |
| ESC 5 | Cancel italic style |  |
| ESC E | Apply bold style |  |
| ESC F | Cancel bold style |  |
| ESC G | Apply double-strike printing |  |
| ESC H | Cancel double-strike printing |  |
| ESC P | Apply pica pitch (10 cpi) |  |
| ESC M | Apply elite pitch (12 cpi) |  |
| ESC q | Apply micron pitch (15 cpi) |  |
| ESC p | Specify proportional characters |  |
| ESC W | Specify double-width characters |  |
| SO | Specify auto-canceling stretched characters |  |
| ESC SO | Specify auto-canceling stretched characters |  |
| SI | Specify compressed characters |  |
| ESC SI | Specify compressed characters |  |
| DC2 | Cancel compressed characters |  |
| DC4 | Cancel auto-canceling double-width characters |  |
| ESC - | Apply/cancel underlining |  |
| ESC ! | Global formatting |  |
| ESC SP | Specify character spacing |  |
| ESC X | Specify character size |  |

Line feed commands (Refer to section 5.3 Line feed commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC 0 | Specify line feed of $1 / 8$ inch |  |
| ESC 2 | Specify line feed of $1 / 6$ inch |  |
| ESC 3 | Specify minimum line feed |  |
| ESC A | Specify line feed of $n / 60$ inch |  |

Horizontal movement commands (Refer to section 5.4 Horizontal movement commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC I | Specify left margin |  |
| ESC Q | Specify right margin |  |
| CR | Carriage return |  |
| ESC D | Specify horizontal tab position |  |
| HT | Perform horizontal tab |  |
| ESC $\$$ | Specify absolute horizontal position |  |
| ESC $\backslash$ | Specify relative horizontal position |  |
| ESC a | Specify alignment |  |

Vertical movement commands (Refer to section 5.5 Vertical movement commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| LF | Line feed |  |
| FF | Page feed |  |
| ESC J | Forward paper feed |  |
| ESC B | Specify vertical tab position |  |
| VT | Perform vertical tab |  |
| ESC (V | Specify absolute vertical position |  |
| ESC (v | Specify relative vertical position |  |

Paper formatting commands (Refer to section 5.6 Paper formatting commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC ( c | Specify page format |  |
| ESC ( C | Specify page length |  |

Printer control commands (Refer to section 5.7 Printer control commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC @ | Initialize (defaults) |  |
| ESC iUx | Reboot |  |

Graphics commands (Refer to section 5.8 Graphics commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC * | Select bit image. |  |
| ESC K | 8-dot single-density bit image |  |
| ESC L | 8-dot double-density bit image |  |
| ESC Y | 8-dot double-speed double-density bit image |  |
| ESC Z | 8-dot quadruple-density bit image |  |

Advanced commands (Refer to section 5.9 Advanced commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC i B | Barcode |  |
| ESC i Q | 2D barcode (QR Code) |  |
| ESC i P | Specify QR Code version |  |
| ESC i V | 2D barcode (PDF417) |  |
| ESC i D | 2D barcode (DataMatrix) |  |
| ESC i M | 2D barcode (MaxiCode) |  |
| ESC i J | 2D barcode (Aztec) |  |
| ESC i G | Specify font setting |  |
| ESC i F P | Print downloaded data |  |
| ESC i a | Switch command mode |  |
| ESC i S | Status information request |  |
| ESC i L | Specify landscape orientation |  |

Advanced static commands (Refer to section 5.10 Advanced static commands.)

| Commands | Description | Note |
| :--- | :--- | :--- |
| ESC iXQ2 | Select default character style |  |
| ESC iXQ1 | Retrieve default character style |  |
| ESC iXk2 | Select default font |  |
| ESC iXk1 | Retrieve default font |  |
| ESC iXX2 | Specify default character size |  |
| ESC iXX1 | Retrieve default character size |  |
| ESC iX32 | Specify default line feed |  |
| ESC iX31 | Retrieve default line feed |  |
| ESC iXA2 | Select default alignment |  |
| ESC iXA1 | Retrieve default alignment |  |
| ESC iX(2 | Specify default page length |  |
| ESC iX(1 | Retrieve default page length |  |
| ESC iXL2 | Select default landscape orientation |  |
| ESC iXL1 | Retrieve default landscape orientation |  |
| ESC iXj2 | Select default international character set |  |
| ESC iXj1 | Retrieve default international character set |  |
| ESC iXm2 | Select default character code set |  |
| ESC iXm1 | Retrieve default character code set |  |
| ESC iXE2 | Specify barcode margin setting |  |
| ESC iXE1 | Retrieve barcode margin setting |  |
| ESC iX_2 (00h) | Specify line-print mode |  |
| ESC iX_1(00h) | Retrieve line-print mode |  |
| ESC iX_2 (01h) | Specify line-print timeout |  |
| ESC iX_1 (01h) | Retrieve line-print timeout |  |
|  |  |  |

## 5. Control Command Details

### 5.1 Character/style selection commands

## ESC R Select international character set

| ASCII: | ESC | $R$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 52 | $n$ |

## Parameters

$0 \leq n \leq 13,64$

## Description

- Selects the character set, and switches some of the character codes in the code table according to the value of $n$.

```
n=0: U.S.A.
n=1: France
n=2: Germany
n=3: U.K.
n=4: Denmark I
n=5: Sweden
n=6: Italy
n=7: Spain I
n=8: Japan
n=9: Norway
n=10: Denmark II
n=11: Spain II
n=12: Latin America
n=13: South Korea
n=64: Legal
```

- The following 12 codes are switched. 23h, 24h, 40h, 5Bh, 5Ch, 5Dh, 5Eh, 60h, 7Bh, 7Ch, 7Dh, 7Eh
- The default setting is $n=0$ (U.S.A.)

## Example

```
Code: 5Ch ESC R 08h 5Ch FF
Print result: \ ¥ 
```

## ESC q Select character style

| ASCII: | ESC | $q$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 71 | $n$ |

## Parameters

$0 \leq n \leq 3$

## Description

- Selects the character style.
$\mathrm{n}=0$ : $\quad$ None (normal characters)
$\mathrm{n}=1$ : Outline
n=2: Shadow
$n=3$ : Shadow and outline

Example

```
Code: \(\quad\) ABC ESC q 02h ABC ESC q 00h ABC FF
Print result: ABCABCABC
```

## ESC k Select font

| ASCII: | ESC | $k$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | $6 B$ | $n$ |

## Parameters

$0 \leq n \leq 5,8 \leq n \leq 11$

## Description

- Selects the font.

| Bitmap Fonts |  | Outline Fonts |  |
| :--- | :--- | :--- | :--- |
| $n=0$ | Gothic (proportional pitch) | $n=8$ | Gothic (proportional pitch) |
| $n=1$ | Letter Gothic Bold (fixed pitch) | $n=9$ | Letter Gothic (fixed pitch) |
| $n=2$ | Brussels (proportional pitch) | $n=10$ | Brussels (proportional pitch) |
| $n=3$ | Helsinki (proportional pitch) | $n=11$ | Helsinki (proportional pitch) |
| $n=4$ | San Diego (proportional pitch) |  |  |
| $n=5$ | Brougham (fixed pitch) |  |  |
|  |  |  |  |

- If the font is changed from a bitmap font to outline font, the character size is changed to the default setting (28 dots).
- If the font is changed from an outline font to bitmap font, the character size is changed to default setting (24 dots).
- If the selected font is not supported current size setting, character size is changed to the default setting (24 dots).
- Proportional pitched Gothic is forced to be selected when a character assigned from $0 x 80$ to 0xFF in the Japanese character code table is used. If the character size is set to 48dot, it is not printed.
- The state at power-on is according to the setting of ESC iXk 2 (default type setting).
- With Cyrillic characters, only 1, 2, 3, 9, 10, and 11 are valid. Please refer to Appendix A: Specifications.

## Font sample

```
1:Letter Gohic Bold(Bitmap)
0 1 2 3 4 5 6 7 8 9
abcdefghijk1mnoparstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
2：Brussels（Bitmap］
0123456789
abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
3：Helsinki（Bitmap）
0123456789
abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
```

```
4:San Diego(Bitmap)
```

abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ

```
8:Gothic(Outline/Japanese)
「」•ヲァイウェオヤココツーアイウエオカキ矢コ
```

## ESC t Select character code set

| ASCII: | ESC | t | n |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 74 | n |

## Parameters

$0 \leq n \leq 4$

## Description

- From the four built-in character code sets, selects the character code set used.
$\mathrm{n}=0$ : Standard character code set
$\mathrm{n}=1$ : Eastern European character code set
$\mathrm{n}=2$ : Western European character code set
n=3: Reserved
$\mathrm{n}=4$ : Japanese character code set
$\mathrm{n}=12$ : Cyrill character code set
- The default setting is $\mathrm{n}=0$.
- Invalid if n is a value outside of the allowable range.
- Please refer to Appendix A: Specifications.

### 5.2 Text printing commands

## ESC 4 Apply italic style

```
ASCII: ESC 4
```

Hexadecimal: 1B 34

## Parameters

None

## Description

- Prints the subsequent text in italics.
- This command is valid anywhere in a text line.

## ESC $5 \quad$ Cancel italic style

| ASCII: | ESC | 5 |
| :--- | :--- | :--- |
| Hexadecimal: | 1B | 35 |

## Parameters

None

## Description

- Cancels the italic character style.
- This command is valid anywhere in a text line.

## Example

```
Code: ABC ESC 4 DEF ESC 5 GHI FF
Print result: ABCDEFGH
```

## ESC E Apply bold style

| ASCII: | ESC | E |
| :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 45 |

## Parameters

None

## Description

- Prints the subsequent text in bold.
- This command is valid anywhere in a text line.

## ESC F Cancel bold style

```
ASCII: ESC F
Hexadecimal: 1B 46
```

## Parameters

None

## Description

- Cancels the bold style.
- This command is valid anywhere in a text line.

## Example

```
Code: ABC ESC E DEF ESC F GHI FF
Print result: ABCDEFGHI
```

## ESC G Apply double-strike printing

| ASCII: | ESC | G |
| :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 47 |

## Parameters

None

## Description

- Prints the subsequent text in bold.
- This command is valid anywhere in a text line.

## ESC H Cancel double-strike printing

```
ASCII: ESC H
Hexadecimal: 1B 48
```

## Parameters

None

## Description

- Cancels the bold style.
- This command is valid anywhere in a text line.

## Example

| Code: | ABC ESC G DEF ESC H GHI FF |
| :--- | :--- |
| Print result: | ABCDEFGHI |

## ESC P Apply pica pitch (10 cpi)

| ASCII: | ESC | $P$ |
| :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 50 |

## Parameters

None

## Description

- Prints the subsequent text with the pica pitch (10 characters/inch).
- The character spacing is 20 dots ( 30 dots for 300dpi printers).
- If the character width is 20 (or 30 ) dots or less, the character spacing is specified as 20 (or 30 ) minus the character width.
- If the character width exceeds 20 (or 30 ) dots, the character spacing is specified as the character width. (The spacing between characters is 0 dot.) In this case, the pitch does not exactly equal the pica pitch.
- With double-width characters, the character spacing is doubled (40(or 60) dots).
- With half-width characters, the character spacing is halved (10(or 15 ) dots).
- When the character spacing is changed with ESC SP, the setting is updated.
- This command is invalid when proportional pitch is selected.
- In outline fonts, the spacing between characters is 0 dot.
- Please refer to Appendix A: Specifications.

| - Setting (dots) |  | Full Width |  |  |  | Double Width |  |  |  | Half Width |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 16 | 24 | 32 | 48 | 16 | 24 | 32 | 48 | 16 | 24 | 32 | 48 |
|  | Gothic | 16 | 24 | 32 | - | 32 | 48 | 64 | - | 8 | 12 | 16 | - |
|  | Letter Gothic Bold | 8 | 10 | 14 | 22 | 16 | 20 | 28 | 44 | 4 | 5 | 7 | 11 |
|  | Brussels | - | 25 | 35 | 56 | - | 50 | 70 | 112 | - | 13 | 18 | 26 |
|  | Helsinki | 16 | 21 | 28 | 44 | 30 | 42 | 56 | 88 | 8 | 11 | 14 | 22 |
|  | San Diego | - | 24 | 35 | 57 | - | 48 | 70 | 114 | - | 12 | 18 | 29 |
|  | Brougham | - | 11 | 16 | 26 | - | 22 | 32 | 52 | - | 6 | 8 | 13 |

The above table refers to characters with a fixed pitch. (Applying styles may increase the size.)

## Example

For a 15 -dot font at full width:

Full width
15 dots

5 dots

Double width
30 dots

## ESC M Apply elite pitch (12 cpi)

| ASCII: | ESC | $M$ |
| :--- | :--- | :--- |
| Hexadecimal: | 1B | $4 D$ |

## Parameters

None

## Description

- Prints the subsequent text with the elite pitch (12 characters/inch).
- The character spacing is 16 dots ( 25 dots for 300dpi printers).
- If the character width is 16 (or 25 ) dots or less, the character spacing is specified as 16 (or 25 ) minus the character width.
- If the character width exceeds 16 (or 25 ) dots, the character spacing is specified as the character width. (The spacing between characters is 0 dot.) In this case, the pitch does not exactly equal the elite pitch.
- With double-width characters, the character spacing is doubled (32(or 50) dots).
- With half-width characters, the character spacing is halved (8(or 13) dots).
- When the character spacing is changed with ESC SP, the setting is updated.
- This command is invalid when proportional pitch is selected.
- In outline fonts, the spacing between characters is 0 dot.

## Example

For a 15-dot font at full width:

## ESC g Apply micron pitch (15 cpi)

| ASCII: | ESC | $g$ |
| :--- | :--- | :--- |
| Hexadecimal: | 1B | 67 |

## Parameters

None

## Description

- Prints the subsequent text with the micron pitch (15 characters/inch).
- This command is not applied to 203dpi printers.
- The character spacing is 20 dots.
- If the character width is 20 dots or less, the character spacing is specified as 20 minus the character width.
- If the character width exceeds 20 dots, the character spacing is specified as the character width.
(The spacing between characters is 0 dot.)
In this case, the pitch does not exactly equal the micron pitch.
- With double-width characters, the character spacing is doubled (40 dots).
- With half-width characters, the character spacing is halved (10 dots).
- When the character spacing is changed with ESC SP, the setting is updated.
- This command is invalid when proportional pitch is selected.
- In outline fonts, the spacing between characters is 0 dot.

## Example

For a 11-dot font at full width:

## ESC p Specify proportional characters

| ASCII: | ESC | $p$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 70 | $n$ |

## Parameters

$\mathrm{n}=0,1,48$ ("0"), 49 ("1")

## Description

- Specifies proportional characters.
$\mathrm{n}=1$ or 49 ("1"): Specifies proportional characters.
$\mathrm{n}=0$ or 48 ("0"): Cancels proportional characters.
- If proportional characters are specified, the character spacing specified with ESC SP is maintained as is.

## ESC W Specify double-width characters

| ASCII: | ESC | W | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 57 | $n$ |

## Parameters

```
n=0,1 or 48 ("0"), 49 ("1")
```

## Description

- Specifies double-width characters.
$\mathrm{n}=1$ or 49 ("1"): Specifies double-width characters.
$\mathrm{n}=0$ or 48 ("0"): Cancels double-width characters.
- Double-width characters specified with this command are not canceled with the DC4 or a line feed.
- Canceling double-width characters also cancels compressed (half-width) characters.

## Example

```
Code: ABC ESC W 1 ABC ESC W O ABC FF
Print result: ABCABCABC
```

## SO Specify auto-canceling stretched characters

ASCII: So

Hexadecimal: OE

## Parameters

None

## Description

- Prints the subsequent text at double width.
- This command is canceled with DC4, CR, LF, VT, FF, ESC J, or an automatic line feed.
- This command is canceled with ESC \$, ESC $\backslash$, ESC ( $V$ or ESC ( $v$.
- This command can also be canceled with ESC WO.

## ESC SO Specify auto-canceling stretched characters

| ASCII: | ESC | SO |
| :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | $0 E$ |

## Parameters

None

## Description

- Same as SO

## Example

```
Code: ABC ESC SO ABCDEFGHIJK...XYZ FF
Print result: ABCABCDEFGFIJK. . (Automatic line feed)
    XYZ
```

## SI

Specify compressed characters

```
ASCII: SI
Hexadecimal: OF
```

## Parameters

## None

## Description

- Prints the subsequent text at half width.

## ESC SI Specify compressed characters

```
ASCII: ESC SI
Hexadecimal: 1B OF
```

## Parameters

None

Description

- Same as SI

## DC2

## Cancel compressed characters

ASCII: DC2

Hexadecimal: 12

## Parameters

None

## Description

- Cancels compressed characters specified with SI.

## DC4 Cancel auto-canceling double-width characters

ASCII: DC4

Hexadecimal: 14

## Parameters

None

## Description

- Cancels double-width characters specified with ESC SO or SO.
- Does not cancel the ESC W command.

Example

```
Code: ABC ESC SO ABCDEF DC4 GHIJK FF
Print result: ABCABCDEFGHIJK
```

## ESC - Apply/cancel underlining

| ASCII: | ESC | - | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | $2 D$ | $n$ |

## Parameters

$\mathrm{n}=0,1,2,3,4$ or 48 ("0"), 49 ("1"), 50 ("2"), 51 ("3"), 52 ("4")

## Description

- Applies or cancels underlining.
$\mathrm{n}=4$ or 52 (" 4 "): Applies underlining with a width of 4 dots.
$\mathrm{n}=3$ or 51 (" 3 "): Applies underlining with a width of 3 dots.
$\mathrm{n}=2$ or 50 ("2"): Applies underlining with a width of 2 dots.
$\mathrm{n}=1$ or 49 (" 1 "): Applies underlining with a width of 1 dot.
$\mathrm{n}=0$ or 48 ("0"): Cancels underlining.
- This command is valid anywhere in a text line.
- The underlining specified with this command is a continuous line.
- Spaces between characters and words are also underlined.
- Areas with the "specify absolute horizontal position" (ESC \$) and "specify relative horizontal position" (ESC $\backslash$ ) commands are not underlined.
- 4 dots is added to the line feed amount for lines that include underlined characters.
- The underline is positioned as follows:

## Example

```
Code: ABC ESC - 1 ABC ESC - 0 ABC FF
Print result: ABCABCABC
```

## ESC! Global formatting

| ASCII: | ESC | ! | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 21 | $n$ |

## Parameters

$0 \leq n \leq 255$

## Description

- Specifies a combination of print modes.
- Specifies modes depending on the bit value of $n$.
- When the ESC ! code is used, a combination of multiple print modes can be specified at one time.
- The priority order is from Bit 5 to Bit 2.
- Bit 0 is available only if Bit 1 is 0 .
- Selected character styles are canceled, and the characters return to the normal style.
- Canceling double-width characters also cancels compressed (half-width) characters.

| Bit | $\mathbf{7}$ | $\mathbf{6}$ | $\mathbf{5}$ | $\mathbf{4}$ | $\mathbf{3}$ | $\mathbf{2}$ | $\mathbf{1}$ | $\mathbf{0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Underline | Italics | Double <br> width | Double <br> height | Bold | Compressed | Proportional | 12 cpi |
| 0 | Cancel | Cancel | Cancel | Cancel | Cancel | Cancel | Cancel | 10 cpi |

## Example

- To apply underlining and specify double-width characters at the same time:

| Code: | ABC ESC! A2h ABC ESC! 00h ABC FF |
| :--- | :--- |
| Print result: | ABCABCA B C |

## ESC SP Specify character spacing

| ASCII: | ESC | SP | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 20 | $n$ |

## Parameters

$0 \leq n \leq 127$

## Description

- Specifies the character spacing.
- n indicates the number of dots.
- The default setting is 0 dot.
- With double-width characters, the character spacing is doubled; with half-width characters, it is halved.

## ESC X Specify character size

| ASCII: | ESC | $X$ | $m$ | $n L$ | $n H$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 58 | $m$ | $n L$ | $n H$ |

## Parameters

| Character width: | The value of $m$ is irrelevant. |  |
| :---: | :---: | :---: |
| Character size: | <Bitmap fonts> <br> Valid only with: <br> $n L=16,24,32,48$ dots <br> $\mathrm{nH}=0$ | <Outline fonts> The maximum is: $\begin{aligned} & \mathrm{nL}=144 \\ & \mathrm{nH}=1 \end{aligned}$ |

## Description

- This command is used only to change the size.
- Outline must not be specified.
- The character width cannot be specified.
- The character size is specified as $\mathrm{n}=\mathrm{nL}+\mathrm{nH} * 256$ dots.
- With bitmap font Gothic, only $n=16,24$ and 32 are valid.
- With bitmap font Letter Gothic Bold and Helsinki, only n=16, 24, 32 and 48 are valid.
- With bitmap font Brussels, San Diego and Brougham, only $n=24,32$ and 48 are valid.
- With outline fonts, $\mathrm{n}=400$ is the maximum
- The commands for specifying stretched characters, compressed characters and the character spacing (SO, ESC W, SI, ESC !, ESC SP) remain available.
- With Cyrillic character code bitmap fonts, only $n=24,32$, and 48 are valid.
- Please refer to Appendix A: Specifications.

## Example

For "ABC" at a 24-dot size and "DEF" at a 48-dot size:
Code: ESC k 01h
ESC X 00h 18h 00h ABC
ESC k 09h
ESC X 00h 30h 00h DEF FF
Print result: ABCDEF
5.3 Line feed commands

## ESC $0 \quad$ Specify line feed of $1 / 8$ inch

```
ASCII: ESC 0
Hexadecimal: 1B 30
```

## Parameters

None

Description

- Specifies a line feed of $1 / 8$ inch (about 0.32 cm ).

## ESC 2 Specify line feed of $1 / 6$ inch

```
ASCII: ESC 2
Hexadecimal: 1B 32
```

## Parameters

None

## Description

- Specifies a line feed of $1 / 6$ inch (about 0.42 cm ).

## ESC 3 Specify minimum line feed

| ASCII: | ESC | 3 | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 33 | $n$ |

## Parameters

$0 \leq n \leq 255$

## Description

- Specifies a line feed of $n$ dots per line.

## ESC A Specify line feed of $n / 60$ inch

| ASCII: | ESC | A | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 41 | $n$ |

## Parameters

$0 \leq n \leq 255$

## Description

- Specifies a line feed of n/60 inch.

### 5.4 Horizontal movement commands

## ESC I Specify left margin

| ASCII: | ESC | I | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | $6 C$ | $n$ |

## Parameters

$0 \leq n \leq 255$
$0 \leq$ left margin<right margin

## Description

- The left margin and the right margin use the left edge of the physically printable area as the reference.
- The area between the left edge of the physically printable area and the specified number of columns is specified as an unprinted area. The left margin position is the right edge of the specified column. (Character width*n)
- The setting is in the range $0 \leq$ (character width* $n$ ) $\leq x$. Settings outside that range are ignored. However, $x$ is a value dependent on the media.
- The area between the left edge (first column) to the nth column is specified as an unprinted area.
- The position of the left margin is the character width (when this command was specified)* $n$ from the left edge.

The character width when the margin specified includes the settings for the character spacing, full-width character spacing or half-width character spacing. In addition, when a pitch of $10 \mathrm{cpi}, 12 \mathrm{cpi}$ or 15 cpi , compressed characters or double-width characters are specified, that character width is considered as the unit.

However, character styles that increase the character width are not applied.

- The horizontal print position is moved to the left margin position.
- If the left margin setting is not at the beginning of the line, the left margin is specified after a line feed. The beginning of the line indicates the left margin position for left alignment; for right and center alignment, it means that no image or character is entered on the line.
- Even if the character width is changed after the left margin has been specified, the left margin position does not change.
- A left margin setting that puts the left margin position to the right of the right margin position is ignored.
- The left margin should be specified at least one column less than the right margin.
- If the difference between the right margin position and the left margin position is less than one character, that character is ignored.
- When proportional pitch is specified with the ESC p command, a character width of 10 cpi is applied.
- If the print media is continuous length tape, the printing orientation is landscape and the page length is not specified, commands specifying the left margin are ignored.

## Example

To specify the left margin at Column 3:

```
Code: ABC CR ESC I 03h EFGHIJ FF
Print result: ;ABC
    EFGHIJ
```

## ESC Q Specify right margin

| ASCII: | ESC | Q | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 51 | $n$ |

## Parameters

$1 \leq n \leq 255$
Left margin<character width (when the command was specified)* $n \leq$ printable area

## Description

- The left margin and the right margin use the left edge of the physically printable area as the reference.
- The right margin position is the right edge of the specified column. (Character width*n)
- The setting is in the range $1 \leq($ character width* $n) \leq x$. Settings outside that range are ignored. However, $x$ is a value dependent on the media.
- Left margin $\leq$ print area<right margin
- The position of the right margin is the character width (when the command was specified)* $n$ from the left edge.
The character width when the margin is specified includes the settings for the character spacing, full-width character spacing or half-width character spacing. In addition, when a pitch of $10 \mathrm{cpi}, 12 \mathrm{cpi}$ or 15 cpi , compressed characters or double-width characters are specified, that character width is considered as the unit.

However, character styles that increase the character width are not applied.

- The horizontal print position is moved to the left margin position.
- If the right margin setting is not at the beginning of the line, the right margin is specified after a line feed. The beginning of the line indicates the left margin position for left alignment; for right and center alignment, it means that no image or character is entered on the line.
- Even if the character width is changed after the right margin has been specified, the right margin position does not change.
- A right margin setting that puts the right margin position to the left of the left margin position is ignored.
- The right margin should be specified at least one column greater than the left margin.
- If the difference between the right margin position and the left margin position is less than one character, that character is ignored.
- When proportional pitch is specified with the ESC p command, a character width of 10 cpi is applied.
- If the print media is continuous length tape, the printing orientation is landscape and the page length is not specified, commands specifying the right margin are ignored.

## CR Carriage return

```
ASCII: CR
Hexadecimal: OD
```

## Parameters

None

## Description

- Ends input of a line, and waits for input of the next line.
- The next print position becomes the beginning of the next line.
- A line feed command immediately after the carriage return is ignored.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.
- Same process as LF

## ESC D Specify horizontal tab position

| ASCII: | ESC | D | $[n]_{k}$ | NUL |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 44 | $[n]_{k}$ | $00 h$ |

## Parameters

$1 \leq n \leq 255,0 \leq k \leq 32$

## Description

- The horizontal tab position is the character width (when the command was specified)* $n$ from the left margin.
- Enter n values in ascending order and end the settings with NUL.
- If an $n$ value is smaller than a previous one, tab setting is ended.
- Even if the character width is changed after the horizontal tab positions have been specified, the horizontal tab position settings do not change.
- ESC D NUL cancels all horizontal tab positions.
- If the left margin is moved, the horizontal tab positions are also moved by the same amount.
- Up to 32 horizontal tab positions can be specified. However, horizontal tab positions beyond the right margin are invalid and only become valid when a change in the right margin setting or left margin setting moves the print area to include those tab positions.
- The character width when the horizontal tabs are specified includes the settings for the character spacing, full-width character spacing or half-width character spacing. In addition, when a pitch of $10 \mathrm{cpi}, 12 \mathrm{cpi}$, or 15 cpi , compressed characters or double-width characters are specified, that character width is considered as the unit.
- When proportional pitch is specified with ESC p, horizontal tab positions are specified at 10 cpi .
- When the printer is turned on, a horizontal tab position is specified every 8 columns at 10 cpi .

Even if the character width is changed before the horizontal tab positions has been specified, the horizontal tab positions do not change.

Example:
After the left margin is specified as Column 3 and the right margin as Column 15, horizontal tabs were specified at Column 5 and Column 10, and HT were performed.

## HT

## Perform horizontal tab

```
ASCII: HT
Hexadecimal: 09
```

## Parameters

None

## Description

- Moves the horizontal print position to the nearest horizontal tab position to the right of the input position.
- If there is no horizontal tab position to the right of the input position, or if the next horizontal tab position is beyond the right margin, the HT command is ignored.
- If underlining is specified, the space between the current position and the next horizontal tab position is not underlined.
- When the printer is turned on, a horizontal tab position is specified every 8 columns at 10 cpi .

Even if the character width is changed before the horizontal tab positions have been specified, the horizontal tab positions do not change.

- This command is available only with left alignment.

## Example

To specify horizontal tabs at Column 4, Column 8, and Column 12, and perform horizontal tabs:

```
Code: ESC D 04h 08h 0Ch 00h
    123456789012 CR A HT B HT C HT D FF
Print result: 123456789012
    A B C D
```

## ESC \$ Specify absolute horizontal position

| ASCII: | ESC | $\$$ | n 1 | n2 |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 24 | n 1 | n2 |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 255$

## Description

- Specifies the absolute print position (in dots) for the next data.
- An absolute print position specifies the next print position as a number of dots from the left margin.
- n 1 and n 2 indicate the number of dots from the left margin.
(Number of dots=n1+n2*256)
- The maximum number of dots that can be specified with n 1 and n 2 depends on the media.
- This command is available only with left alignment.

## ESC 1 Specify relative horizontal position

| ASCII: | ESC | I | n1 | n2 |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | $5 C$ | $n 1$ | $n 2$ |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 255$

## Description

- Specifies the horizontal print position (in dots) as a relative position from the current position.
- A relative position specifies the next print position as a number of dots from the current position.
- n 1 and n 2 indicate the number of dots from the current position. (Number of dots=n1+n2*256)
- Left margin position<horizontal position after moving<right margin position

Horizontal position after moving=n1+n2*256

- The specified value for moving to the left is expressed as a two's complement. It is determined by the following equation.
n1+n2*256=65536-distance actually moved
- This command is available only with left alignment.

## ESC a Specify alignment

| ASCII: | ESC | $a$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 61 | $n$ |

## Parameters

$0 \leq n \leq 3$ or " 0 " $\leq n \leq$ " 3 "

## Description

- Prints the subsequent text with the alignment described below, according to the value of $n$.
$\mathrm{n}=0$ or 48 ("0"): Applies left alignment.
$\mathrm{n}=1$ or 49 ("1"): Applies center alignment.
$\mathrm{n}=2$ or 50 ("2"): Applies right alignment.
$\mathrm{n}=3$ or 51 (" 3 "): Applies nothing.
- The default setting is $\mathrm{n}=0$.
- Data is aligned between the left and right margins by entering a CR, LF, and FF code or by buffer printing.
- If the alignment setting is not at the beginning of the line, the alignment is specified after a line feed.

The beginning of the line indicates the left margin position for left alignment;
for right and center alignment, it means that no image or character is entered on the line.

- HT, ESC $\backslash$ and ESC $\$$ are ignored when $\mathrm{n}=1$ or $\mathrm{n}=2$.
- If the print media is continuous length tape, the printing orientation is landscape and the page length is not specified, commands specifying alignment are ignored.

### 5.5 Vertical movement commands

## LF Line feed

```
ASCII: LF
```

Hexadecimal: OA

## Parameters

None

## Description

- Feeds the paper by the amount specified by a line feed command (ESC 0, ESC 2, ESC 3, ESC A).
- The print position becomes the beginning of the next line.
- The default value is a line feed of 32 dots.
- A carriage return immediately after a line feed is ignored.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.
- Same process as CR

## FF Page feed

ASCII: FF
Hexadecimal: OC

## Parameters

None

## Description

- Starts the printing.
- The previously entered data string of characters and commands is cleared after being printed.
- At this time, auto-canceling double-width characters specified with SO or ESC SO are canceled.

## ESC J Forward paper feed

| ASCII: | ESC | $J$ | $n$ |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | $4 A$ | $n$ |

## Parameters

$0 \leq n \leq 255$

## Description

- Ends input for the current line and moves the vertical print position forward by n dot.
- If the bottom margin setting is exceeded, printing starts.
- With left alignment, the print position for the next line becomes the end position of the current line.
(The horizontal position does not move to the left margin.)
With right alignment and center alignment, the horizontal position moves to the beginning of the line.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.

Left alignment

Center alignment

Right alignment

Example: Performing a forward paper feed after the second line

## ESC B Specify vertical tab position

| ASCII: | ESC | B | $[n]_{k}$ | NUL |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 42 | $[n]_{k}$ | $00 h$ |

## Parameters

$1 \leq n \leq 255$
$0 \leq k \leq 16$

## Description

- The vertical tab position is the line feed amount (when this command was specified)*n from the top margin.
- Enter $n$ values in ascending order and end the settings with NUL.
- If an $n$ value is smaller than a previous one, tab setting is ended.
- Up to 16 vertical tabs can be specified.
- ESC B NUL cancels all vertical tab positions.
- Vertical tab positions can be specified regardless of the setting of the bottom margin position. However, vertical tab positions outside the print area (beyond the bottom margin position) are invalid and only become valid when a change in the top margin setting or bottom margin setting moves the print area to include those tab positions.
- Use VT to move to the vertical tab position.
- When changing vertical tab positions, specify all positions again.
- If the top margin is moved, the vertical tab positions are also moved by the same amount.
- Even if the line feed amount is changed after the vertical tab positions have been specified, the vertical tab position settings do not change.
- Performing a VT when no vertical tabs have been specified is equal to performing a CR.

## VT

## Perform vertical tab

```
ASCII: VT
Hexadecimal: OB
```

## Parameters

None

## Description

- Moves the print position to the nearest vertical tab position down from the input position.
- The next horizontal print position becomes the beginning of the line.
- If the next vertical tab position extends beyond the bottom margin, or if there is no vertical tab position specified below the current position, VT is performed as if it is (moves to the TOF position of the next page).

Example: Vertical tabs are specified at Lines 6, 11, and 15, and data is entered while VT are performed.

- When all vertical tab positions have been canceled by an initialization or with ESC B NUL, performing VT is equal to performing CR.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.

## ESC (V Specify absolute vertical position

| ASCII: | ESC | $($ | $V$ | nL | nH | mL | mH |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 28 | 56 | nL | nH | mL | mH |

## Parameters

$\mathrm{nL}=2$
$\mathrm{nH}=0$
$0 \leq m L \leq 255$
$0 \leq m H \leq 127$

## Description

- Specifies the vertical print position as an absolute position from the top margin position. Vertical position=mL+mH*256+top margin
- The absolute vertical position is measured from the top margin position when this command was specified.
- If a position extending beyond the bottom margin is specified, printing starts.
- There is no restriction on the amount of movement back (upward) from the current position.
- With left alignment, the print position for the next line becomes the end position of the current line.
(The horizontal position does not move to the left margin.)
With right alignment and center alignment, the horizontal position moves to the beginning of the line.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.

## ESC (v Specify relative vertical position

| ASCII: | ESC | $($ | $v$ | $n L$ | $n H$ | $m L$ | $m H$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 28 | 76 | $n L$ | $n H$ | $m L$ | $m H$ |

## Parameters

$\mathrm{nL}=2$
$\mathrm{nH}=0$
$0 \leq m L \leq 255$
$0 \leq m H \leq 63,192 \leq m H \leq 255$
$-16384 \leq\left(m L+m H^{*} 256\right) \leq 16383$

## Description

- Specifies the vertical print position as a relative position from the current position.

Vertical position after movement=mL+mH*256+current position

- When moving upwards, the specified value is expressed as a two's complement.

It is determined by the following equation.
$\mathrm{mL}+\mathrm{mH}$ *256=65536-distance actually moved

- Settings moving the print position above the top margin are ignored.
- If a position extending beyond the bottom margin is specified, printing starts.
- With left alignment, the print position for the next line becomes the end position of the current line.
(The horizontal position does not move to the left margin.)
With right alignment and center alignment, the horizontal position moves to the beginning of the line.
- Auto-canceling double-width characters specified with SO or ESC SO are canceled.

Left alignment

Center alignment

Right alignment

Example: Moving to a vertical position specified after the second line

### 5.6 Paper formatting commands

## ESC (c Specify page format

| ASCII: | ESC | $($ | $c$ | $n L$ | $n H$ | $t L$ | $t H$ | $B L$ | $B H$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 28 | 63 | $n L$ | $n H$ | $t L$ | $t H$ | $B L$ | $B H$ |

## Parameters

$\mathrm{nL}=4, \mathrm{nH}=0$
(tL+tH*256) < (BL+BH*256)
Top margin<bottom margin

## Description

- Specifies settings for the top and bottom margins.
- The physically printable area depends on the media.

The top margin and the bottom margin are specified in units of 1 dot using the top edge of the physically printable area as the reference.
(The left margin and the right margin use the left edge of the physically printable area as the reference.)

- Top margin=tL+tH*256
- Bottom margin= BL+BH*256
- The top margin position is the TOF in the vertical direction.
- All previously entered text is cleared.
- When this command is used previously specified top and bottom margins are canceled.
- A standard unit is not used.
- If the print media is continuous length tape, the printing orientation is landscape and the page length is not specified, commands specifying the page format are ignored.

## ESC (C Specify page length

| ASCII: | ESC | $($ | $C$ | $n L$ | $n H$ | $m L$ | $m H$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 28 | 43 | $n L$ | $n H$ | $m L$ | $m H$ |

## Parameters

$$
\begin{aligned}
& \mathrm{nL}=2, \mathrm{nH}=0 \\
& 0 \leq\left(\mathrm{mL}+\mathrm{mH}^{*} 256\right)<20300 \text { (for 203dpi printers) } \\
& 0 \leq\left(\mathrm{mL}+\mathrm{mH}^{*} 256\right)<30000 \text { (for 300dpi printers) }
\end{aligned}
$$

## Description

- Specifies the page length.
* A page length 0 indicates the Auto setting.
- The unit is 1 dot

Page length $=m L+m H^{*} 256$

- The current paper position is the TOF.
- The top and bottom margins are canceled with ESC ( c.
- All previously entered text is cleared.
- A standard unit is not used.
- This command is available only with continuous length tape.

Inch, mm, and dot conversion table

| inch | mm | Number of dots <br> (203dpi) | Number of dots <br> (300dpi) |
| :---: | :---: | :---: | :---: |
| 0 | 0.0 | 0 | 0 |
| 1 | 25.4 | 203 | 300 |
| 2 | 50.8 | 406 | 600 |
| 3 | 76.2 | 609 | 900 |
| 4 | 101.6 | 812 | 1200 |
| 5 | 127.0 | 1015 | 1500 |
| 6 | 152.4 | 1218 | 1800 |
| 7 | 177.8 | 1421 | 2100 |
| 8 | 203.2 | 1624 | 2400 |
| 9 | 228.6 | 1827 | 2700 |
| 10 | 254.0 | 2030 | 3000 |
| 11 | 279.4 | 2233 | 3300 |
| 12 | 304.8 | 2436 | 3600 |
| 13 | 330.2 | 2639 | 3900 |
| 14 | 355.6 | 2842 | 4200 |
| 15 | 381.0 | 3045 | 4500 |
| 16 | 406.4 | 3248 | 4800 |
| 17 | 431.8 | 3451 | 5100 |
| 18 | 457.2 | 3654 | 5400 |
| 19 | 482.6 | 3857 | 5700 |
| 20 | 508.0 | 4060 | 6000 |

### 5.7 Printer control commands

## ESC @ Initialize

| ASCII: | ESC | @ |
| :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 40 |

## Parameters

None

## Description

- Returns all commands to their default settings. (See below.)

| Item | Default |
| :--- | :--- |
| Input buffer | Saved |
| Text buffer | Cleared |
| Print buffer | Cleared |
| Top margin | 0 dot |
| Bottom margin | Depends on media |
| Left margin | 0 dot |
| Right margin | Depends on media |
| Line feed amount | 32 dots |
| Horizontal tab positions | Horizontal tab every 8 characters <br> (based on a character width of 10 cpi) |
| Vertical tab positions | None |
| Character size | 21 dots |
| Character spacing | 0 dot |
| International character set | USA |
| Character style | Canceled |
| Compressed | Canceled |
| Horizontal print position | Top margin position (TOF position) |
| Vertical print position | Left margin position |
| Landscape setting | Canceled |
| Page length setting | Canceled |
| Font | Letter Gothic Bold |
|  |  |

## ESCiUx Reboot

| ASCII: | ESC | i | $U$ | $x$ |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 55 | 78 |

## Parameters

None

## Description

- Reboot the printer.
- This is a raster command. Please change the mode before sending this command. Please refer to ESC i a Switch command mode.

### 5.8 Graphics commands

## ESC * Select bit image <for 203dpi printers>

| ASCII: | ESC | $*$ | $m$ | n1 | n2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 2A | $m$ | n1 | n2 | Data |

## Parameters

$m=0,1,2,3,4,6,32,33,38,39$
The image data is as follows:

- $\mathrm{n} 1+\mathrm{n} 2 * 256$ bytes when $\mathrm{m}=0,1,2,3,4,6$
- (n1+n2*256)*3 bytes when $m=32,33,38,39$

## Description

- Refer to "ESC * Select bit image <for 300dpi printers>" for 300dpi printers.
- Selects and outputs a bit image according to the value of $m$.
- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n2: The quotient from dividing the number of dot positions by 256

| $\mathbf{m}$ | Horizontal Dot <br> Density | Vertical Dot <br> Density | Horizontal Dot <br> Resolution | Vertical Dot <br> Resolution |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 60 dpi | 60 dpi | $4 / 203$ inch | $4 / 203$ inch |
| 1 | 120 dpi | 60 dpi | $2 / 203$ inch | $4 / 203$ inch |
| 2 | 120 dpi | 60 dpi | $2 / 203$ inch | $4 / 203$ inch |
| 3 | 240 dpi | 60 dpi | $1 / 203$ inch | $4 / 203$ inch |
| 4 | 80 dpi | 60 dpi | $3 / 203$ inch | $4 / 203$ inch |
| 6 | 90 dpi | 60 dpi | $3 / 203$ inch | $4 / 203$ inch |
| 32 | 60 dpi | 180 dpi | $4 / 203$ inch | $1 / 203$ inch |
| 33 | 120 dpi | 180 dpi | $2 / 203$ inch | $1 / 203$ inch |
| 38 | 90 dpi | 180 dpi | $3 / 203$ inch | $1 / 203$ inch |
| 39 | 180 dpi | 180 dpi | $1 / 203$ inch | $1 / 203$ inch |

- Horizontally neighboring dots are not omitted.

## Limitations:

A maximum of 63 can be used with this command.
The total size of the image data contained in one page must be $207, \mathbf{3 6 0}$ bytes or less.

## When $m=0,1,2,3,4,6$

- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n 2 : The quotient from dividing the number of dot positions by 256

Relationship between the image data and the dots

- First, the data is lined up in one row as follows:

- One dot of the image data is enlarged as follows, according to the value of m .

$m=6$
- As a result, the image is sized depending on the value of $m$, as follows:

| $m=0$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 4$ dots horizontally |
| :--- | :--- |
| $m=1$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 2$ dots horizontally |
| $m=2$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 2$ dots horizontally |
| $m=3$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 1$ dots horizontally |
| $m=4$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally |
| $m=6$ | 32 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally |

## When $m=32,33,38,39$

- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n 2 : The quotient from dividing the number of dot positions by 256

Relationship between the image data and the dots
First, the data is lined up in three rows as follows:

- One dot of the image data is enlarged as follows, according to the value of m .

- As a result, the image is sized depending on the value of $m$, as follows:
$\mathrm{m}=3224$ dots vertically× $\left.\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 4$ dots horizontally
$\mathrm{m}=3324$ dots vertically $\times\left(\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 2$ dots horizontally
$m=38 \quad 24$ dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally
$m=3924$ dots vertically×(n1+n2*256)*1 dots horizontally

## ESC * Select bit image <for 300dpi printers>

| ASCII: | ESC | * | $m$ | n1 | n2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | $2 A$ | $m$ | $n 1$ | n2 | Data |

## Parameters

$m=0,1,2,3,4,6,32,33,38,39,40,71,72,73$
The image data is as follows:

- $\mathrm{n} 1+\mathrm{n} 2^{*} 256$ bytes when $\mathrm{m}=0,1,2,3,4,6$
- ( $n 1+n 2 * 256$ )* 3 bytes when $m=32,33,38,39,40$
- ( $\left.\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 6$ bytes when $m=71,72,73$

## Description

- Refer to "ESC * Select bit image <for 203dpi printers>" for 203dpi printers.
- Selects and outputs a bit image according to the value of $m$.
- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n 2 : The quotient from dividing the number of dot positions by 256

| $\mathbf{m}$ | Horizontal Dot <br> Density | Vertical Dot <br> Density | Horizontal Dot <br> Resolution | Vertical Dot <br> Resolution |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 60 dpi | 60 dpi | $6 / 300$ inch | $6 / 300$ inch |
| 1 | 120 dpi | 60 dpi | $3 / 300$ inch | $6 / 300$ inch |
| 2 | 120 dpi | 60 dpi | $3 / 300$ inch | $6 / 300$ inch |
| 3 | 240 dpi | 60 dpi | $2 / 300$ inch | $6 / 300$ inch |
| 4 | 80 dpi | 60 dpi | $4 / 300$ inch | $6 / 300$ inch |
| 6 | 90 dpi | 60 dpi | $4 / 300$ inch | $6 / 300$ inch |
| 32 | 60 dpi | 180 dpi | $6 / 300$ inch | $2 / 300$ inch |
| 33 | 120 dpi | 180 dpi | $3 / 300$ inch | $2 / 300$ inch |
| 38 | 90 dpi | 180 dpi | $4 / 300$ inch | $2 / 300$ inch |
| 39 | 180 dpi | 180 dpi | $2 / 300$ inch | $2 / 300$ inch |
| 40 | 300 dpi | 180 dpi | $1 / 300$ inch | $2 / 300$ inch |
| 71 | 180 dpi | 360 dpi | $2 / 300$ inch | $1 / 300$ inch |
| 72 | 360 dpi | 360 dpi | $1 / 300$ inch | $1 / 300$ inch |
| 73 | 360 dpi | 360 dpi | $1 / 300$ inch | $1 / 300$ inch |

- Horizontally neighboring dots are not omitted.

## Limitations:

A maximum of 63 can be used with this command.
The total size of the image data contained in one page must be 207,360 bytes or less.

## When $m=0,1,2,3,4,6$

- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n2: The quotient from dividing the number of dot positions by 256

Relationship between the image data and the dots

- First, the data is lined up in one row as follows:

- One dot of the image data is enlarged as follows, according to the value of m .
$\mathrm{m}=0$
$\mathrm{m}=1$
$\mathrm{m}=2$
$\mathrm{m}=3$
$\mathrm{m}=4$
$m=6$

- As a result, the image is sized depending on the value of $m$, as follows:

| $m=0$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 6$ dots horizontally |
| :--- | :--- |
| $m=1$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally |
| $m=2$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally |
| $m=3$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 2$ dots horizontally |
| $m=4$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 4$ dots horizontally |
| $m=6$ | 48 dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 4$ dots horizontally |

When $\mathrm{m}=32$, 33, 38, 39, 40

- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n 2 : The quotient from dividing the number of dot positions by 256

Relationship between the image data and the dots
First, the data is lined up in three rows as follows:

- One dot of the image data is enlarged as follows, according to the value of $m$.

- As a result, the image is sized depending on the value of $m$, as follows:
$\mathrm{m}=32 \quad 48$ dots vertically $\times\left(\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 6$ dots horizontally
$m=33 \quad 48$ dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 3$ dots horizontally
$\mathrm{m}=38 \quad 48$ dots vertically $\times\left(\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 4$ dots horizontally
$\mathrm{m}=39 \quad 48$ dots vertically $\times(\mathrm{n} 1+\mathrm{n} 2 * 256)^{*} 2$ dots horizontally
$m=40 \quad 48$ dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 1$ dot horizontally

## When $\mathrm{m}=71,72,73$

- n 1 and n 2 indicate the number of dot positions.
n 1 : The remainder from dividing the number of dot positions by 256
n 2 : The quotient from dividing the number of dot positions by 256

Relationship between the image data and the dots

First, the data is lined up in six rows as follows:

- One dot of the image data is enlarged as follows, according to the value of m .
$m=71$
$\mathrm{m}=72$
$\mathrm{m}=73$
O
- As a result, the image is sized depending on the value of m , as follows:
$\mathrm{m}=71 \quad 48$ dots vertically $\times(\mathrm{n} 1+\mathrm{n} 2 * 256)^{*} 2$ dots horizontally
$\mathrm{m}=72 \quad 48$ dots vertically $\times\left(\mathrm{n} 1+\mathrm{n} 2^{*} 256\right)^{*} 1$ dot horizontally
$m=73 \quad 48$ dots vertically $\times\left(n 1+n 2^{*} 256\right)^{*} 1$ dot horizontally

## ESC K 8-dot single-density bit image

| ASCII: | ESC | K | n 1 | n 2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | $4 B$ | n 1 | n 2 | Data |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 3$
The data contains $\mathrm{n} 1+\mathrm{n} 2^{*} 256$ bytes of image data.

## Description

Specifies that an 8-dot single-density bit image is printed with the number of dot positions indicated by n 1 and n 2 .

- Same behavior as m=0 specified in ESC *.

## ESC L 8-dot double-density bit image

| ASCII: | ESC | L | n1 | n2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 4C | n1 | n2 | Data |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 3$
The data contains $\mathrm{n} 1+\mathrm{n} 2^{*} 256$ bytes of image data.

## Description

Specifies that an 8-dot double-density bit image is printed with the number of dot positions indicated by n1 and n2.

- Same behavior as $\mathrm{m}=1$ specified in ESC *.

## ESC Y 8-dot double-speed double-density bit image

| ASCII: | ESC | Y | n1 | n2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 59 | n1 | n2 | Data |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 3$
The data contains $\mathrm{n} 1+\mathrm{n} 2 * 256$ bytes of image data.

## Description

- Same as for an 8-dot double-density bit image. Horizontally neighboring dots are not omitted.

## ESC Z 8-dot quadruple-density bit image

| ASCII: | ESC | Z | n1 | n2 | Data |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | $5 A$ | n1 | n2 | Data |

## Parameters

$0 \leq n 1 \leq 255,0 \leq n 2 \leq 7$
The data contains $\mathrm{n} 1+\mathrm{n} 2 * 256$ bytes of image data.

## Description

Specifies that an 8-dot quadruple-density bit image is printed with the number of dot positions indicated by n 1 and n 2 .

- Same behavior as $\mathrm{m}=3$ specified in ESC *.
- Horizontally neighboring dots are not omitted.

### 5.9 Advanced commands

## ESC i B Barcode

| ASCII: | ESC | i [Parameters] | B or b [Barcode data] | Backslash |
| :---: | :---: | :---: | :---: | :---: |
| Hexadecimal: | 1B | 69 [Parameters] | 42 or 62 [Barcode data] | 5C |
| Format: | ESC | i [Parameters] | B or b [Barcode data] | [Backslash] |
|  |  | (1) | (2) (3) | (4) |

## Parameters

(1) [Parameters]: Barcode parameters

| T or t type) | to: | CODE39 |
| :--- | :--- | :--- |
|  | t1: | ITF (II-2/5) |
|  | t5: | EAN-8, EAN-13, UPC-A |
|  | t6: | UPC-E |
|  | t9: | CODABAR |
|  | ta: | CODE128 |
|  | tb: | GS1-128 (UCC/EAN-128) |
|  | tc: | GS1 Databar(RSS) |
|  | td: | CODE93 |
|  | te: | POSTNET |
|  | tf: | UPC/EAN EXTENSION |
|  | tg: | MSI/Plessey |
| th: | Intelligent Mail Barcode |  |$|$

| h (height) | h n1 n2 <br> Height=n1+n2*256 (dots) <br> 48 $\leq$ height $\leq 480$ <br> If height $<48$, height $=48$. <br> If height $>480$, height $=480$. <br> However, the height is as shown below with tc. <br> 131<height<Maximum width (GS1 Databar Standard) <br> $71 \leq$ height $\leq M a x i m u m$ width (GS1 Databar Truncated) <br> $71 \leq$ height $\leq M a x i m u m$ width (GS1 Databar Stacked) <br> 239<height<Maximum width (GS1 Databar Stacked Omni) <br> 62<height $\leq$ Maximum width (GS1 Databar Limited) <br> 134<height $\leq$ Maximum width (GS1 Databar Expanded) <br> If height<min., height=min. <br> If height>max., height=max. <br> Maximum width depends on each models. Please refer to "Appendix A: <br> Specifications". <br> However, the height is as shown below with te. <br> 203dpi : If height $<48$, height $=25$. <br> 300 dpi : If height $<48$, height $=37$. <br> However, the height is as shown below with th. <br> 203dpi : If height $<48$, height $=29$. <br> 300dpi : If height $<48$, height $=43$. |
| :---: | :---: |
| w (width) | w0: extra small <br> w1: small <br> w2: medium <br> w3: large |
| E or e (parentheses deletion) | e0: ON <br> e1: OFF |
| 0 (GS1 Databar symbols model) | 00: GS1 Databar Standard <br> 01: GS1 Databar Truncated <br> o2: GS1 Databar Stacked <br> o3: GS1 Databar Stacked Omnidirectional <br> 04: GS1 Databar Limited <br> o5: GS1 Databar Expanded Standard <br> o6: GS1 Databar Expanded Stacked |
| C (number of horizontal characters for GS1 Databar Expanded Stacked) | c: o. of horizontal characters <br> This must be an even value where $2 \leq$ no. of horizontal characters $\leq 20$. |
| Z <br> (ratio between thick and thin bars) | z0: $(3: 1)$ <br> z1: $(2.5: 1)$ <br> z2: $(2: 1)$ |
| f <br> (equalize bar lengths) | f0: OFF <br> f1: ON |

(A barcode with a large number of stacked rows may be considered out of specifications and unreadable by the reader.)

## Note

* For parameter numerals 0-9, both 00h-09h and 30h-39h are recognized.
* For parameter type, both 'a'-'h' and 'A'-'H' are recognized.
* The parameter "parentheses deletion" is available only when GS1-128 (UCC/EAN-128) is selected.
* The parameter "ratio between thick and thin bars" is available only when t 0 , t 1 or t 9 is selected.
* The parameter "equalize bar lengths" is available only when t 5 or t 6 is selected.
* If any other type is selected, these parameters are ignored.
* When there is no type command or an invalid type command has been specified, CODE39 is specified.
* The number of characters that can be entered for each barcode type is as follows:
t0: 1-50 characters ("*" is not included)
t1: 1-64 characters
t5: 7 characters (for EAN-8)
12 characters (for EAN-13)
11 characters (for UPC-A)
t6: 6 characters
t9: 3-64 characters (Must begin and end with $A, B, C$, or $D$.)
ta: 1-64 characters
tb: 1-64 characters
tc: 3-15 characters (begins with "01") (except with GS1 Databar Expanded)
Third digit is " 0 " or " 1 ". (for GS1 Databar Limited)
1-64 numbers or 1-40 letters* (for GS1 Databar Expanded)
* ISO646 characters can be printed.
(numbers, letters, spaces, !, ", \%, \&, ', (, ), *, +, ,, -, ., /, :, ;, <, =, >, ? and _)
td: 1-64 characters
te: 5 characters, 9 characters, 11 characters
tf: 2 characters, 5 characters
tg: 1-14 characters
th: 20 characters, 25 characters, 29 characters, 31 characters (Second digit is " 0 "-" " 4 ")

## (2) B or b: Beginning of barcode data

(3) [Barcode data]: Barcode data
? (Generate check digit):
Generates a check digit when "?" is in the barcode data.
The position of "?" is irrelevant as long as it is within the barcode data.
With POSTNET, CODE93, UPC/EAN EXTENSION, CODE128, GS1-128(UCC/EAN-128) and Intelligent Mail Barcode, no check digit is generated.

If "?" is inserted, it is treated as barcode data.
(4) [Backslash]: End of barcode

| Barcode Type | Command |
| :--- | :---: |
| POSTNET, UPC/EAN EXTENTION, CODE39, <br> ITF(I-2/5), EAN-8, EAN-13, UPC-A, UPC-E, <br> CODABAR, GS1 Databar , MSI/Plessey, <br> Intelligent Mail Barcode | ESC i [Parameter] B or b [Barcode data] I |
| CODE93, CODE128, <br> GS1-128 (UCC/EAN-128) | ESC i [Parameter] B or b [Barcode data] III |

## Description

- Specifies a barcode image.
- Any data extending beyond the right margin is ignored.
- Since the check digit is generated automatically from the barcode data, the check digit is not sent as barcode data. Since the length of the barcode data is also checked, the data would not be correctly recognized if the check digit data was present.
- With CODE39, ITF (I-2/5), CODABAR, CODE128, GS1-128 (UCC/EAN-128) or GS1 Databar Expanded, the buffer length for the barcode image is about 22 cm . A barcode longer than 22 cm will not be printed.
- The characters that can be printed with CODE128 and GS1-128 (UCC/EAN-128) are the 128 ASCII characters and the special codes FNC1, FNC2, FNC3 and FNC4.

Codes assigned to the special codes:
FNC1: 86h
FNC2: 81h
FNC3: 80h
FNC4: 84h

- The control codes and special codes appear as spaces when characters are printed below CODE128 and GS1-128 (UCC/EAN-128) barcodes.
- Special code FNC1 can also be printed with GS1 Databar Expanded.

This special code also appears as a space when characters are printed below the barcode.
Code assigned to the special code:
FNC1: 86h

- With only UPC/EAN EXTENSION, the data is printed above the barcode.

## Example

For barcode type CODE39, with no characters printed below the barcode, a size of large (width) $\times 480$ dots (height), without parentheses, a ratio between thick and thin bars of $3: 1$, and bar lengths not equalized, the command will be as shown below.

```
ESC it0 r0 w3 h EOh 01h e0 z0 f1 B 123456789 \
```

## ESC i Q 2D barcode (QR Code)

| ASCII: | ESC | i | Q or q | Data |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 51 or 71 | Data |  |
| Format: | ESC | i | Q or q | [Parameters] [Barcode data] | III |
|  |  |  |  | $(2)$ | $(3)$ |

## Parameters

## (1) [Parameters]

Unlike with 1D barcodes, all parameters must be specified in order, starting from the top.
If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| 1. Cell size | [1-byte decimal] 1-32 | Specifies the dot size per cell side. ( The default value is 3 .) |
| :---: | :---: | :---: |
| 2. Symbol type | $\begin{array}{ll}\text { [1-byte decimal] } & 1 \\ \text { [1-byte decimal] } \\ \text { [1-byte decimal] } & 3\end{array}$ | Model 1 <br> Model 2 (default value) <br> Micro QR |
| 3. Structured Append setting | [1-byte decimal] 0 <br> [1-byte decimal] 1 | Not partitioned. (default value) Partitioned (*1) |
| 4. Code number | [1-byte decimal] 1-16 | Indicates the number of the symbol in a partitioned QR Code. |
| 5. Number of partitions | [1-byte decimal] 2-16 | Indicates the total number of symbols in a partitioned QR Code. |
| 6. Parity data | $\begin{aligned} & \text { [1-byte hexadecimal] } \\ & \text { 00-FF } \end{aligned}$ | Value (in bytes) of exclusively OR'ing all the print data (print data before partition) |
| 7. Error correction level | [1-byte decimal] 1 <br> [1-byte decimal] 2 <br> [1-byte decimal] 3 <br> [1-byte decimal] 4 | High-density level: L 7\% <br> Standard level: M 15\% (default value) <br> High-reliability level: Q 25\% <br> Ultra-high-reliability level: H 30\% (*2) |
| 8. Data input method | [1-byte decimal] 0 <br> [1-byte decimal] 1 | Auto input (default value) <br> Manual input <br> Selects whether numbers, English alphanumeric characters, kanji characters or binary characters are entered. |

(*1) With Micro QR, the Structured Append setting is invalid, and the default setting is used.
(*2) With Micro QR, error correction level 4 is invalid, and the default setting is used.
(*3) Some barcode readers cannot recognize a barcode with the cell size specified as 1 dot or 2 dots.

## What is the QR Code Structured Append setting?

QR Codes have Structured Append settings.
A long character string can be partitioned into 2 to 16 partitions and printed.
With ESC/P commands, it is necessary to enter only the number of partitions.
For example, if the print data is partitioned into 3 partitions, the barcode data is as follows:

| ESC | i | Q or q | [1st parameter] | [1st set of barcode data] | III |
| :--- | :--- | :--- | :--- | :--- | :--- |
| ESC | i $Q$ or q | [2nd parameter] | [2nd set of barcode data] | III |  |
| ESC | i $Q$ or q | [3rd parameter] | [3rd set of barcode data] | III |  |

Refer to the following for specifying settings for 3 through 6 in [Parameters].

| 3. Structured append <br> setting: | This determines whether or not the barcode data is partitioned. If the data is <br> not partitioned, enter 0. |
| :--- | :--- |
| When not partitioning, the values of 4 (code number), 5 (number of |  |
| partitions), and 6 (parity data) are ignored; therefore, enter 0 as a dummy |  |
| value for these parameters. |  |

## What is exclusive OR'ing in bytes?

The data is exclusively OR'ed (XOR'ed) in bytes and in order.
For example, putting a character string into hexadecimal gives $31 \mathrm{~h}, 32 \mathrm{~h}, 33 \mathrm{~h}, 34 \mathrm{~h}$.

## Note

If this parity value is incorrect, the correct QR Code is not generated.

## Summary

Printing the character string " 123456789 " with a cell size of 4 dots, Model 2, standard error correction level, and automatic data input

| Without Structured Append | ESC i Q | 04h | 02h | 00h | 00h | 00h | 00h | 02h | 00h | "123456789" III |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| With Structured | ESC i Q | 04h | 02h | 01h | 01h | 03h | 31h | 02h | 00h | "123" III |
| Append | ESC i Q | 04h | 02h | 01h | 02h | 03h | 31h | 02h | 00h | "456" III |
| [Three partitions] | ESC i Q <br> (The parity | 04h <br> y for | 02h | 01h <br> aracter | 03h string | $\begin{gathered} \text { 03h } \\ \hline 123 \end{gathered}$ | $\begin{gathered} 31 \mathrm{~h} \\ +56789 " \end{gathered}$ | $\begin{aligned} & \mathbf{0 2 h} \\ & 9 " \text { is } 31 \end{aligned}$ | $\begin{aligned} & \text { 00h } \\ & \text { Ih.) } \end{aligned}$ | $\text { " } 789 \text { " III }$ |

(2) [Barcode data]: Barcode data

When manual input is selected in 8 (data input method), the barcode data must be preceded with one of the following single-byte alphanumeric characters.

| Barcode <br> Type | Preceded <br> Character | Example |
| :--- | :--- | :--- |
| Number input | N or n | - |
| Alphanumeric <br> character input | A or a | ESC i Q [other parameters] 1 A012345678aBcDe III |
| Kanji character <br> input | K or k | ESC i Q [other parameters] 1 K kanji character input III |
| Binary character <br> input | B or b+4-digit <br> number | ESC i Q [other parameters] 1 B0005\#\#\#\#\# III <br> With the "4-digit number", specify the number of binary <br> characters to actually be entered. For example, if 12 binary <br> characters are to be entered, specify: <br> B 0012 (30h, 30h, 31h, 32h) |

The number of barcode data characters that can be entered depends on the model type and the input method.

| Model 1 | 707 English alphanumeric characters, 1167 numbers, 486 binary bytes, 299 <br> kanji characters |
| :--- | :--- |
| Model 2 | 4296 English alphanumeric characters, 7089 numbers, 2953 binary bytes, 1817 <br> kanji characters |
| Micro QR | 21 English alphanumeric characters, 35 numbers, 15 binary bytes, 9 kanji <br> characters |

## Note

The numbers listed above are for an error correction level at a high-density level (L 7\%).
If the standard level or higher is set, the number of characters that can be entered may decrease. In addition, even if the characters are entered with the high-density level (L) specified, the number of characters that can be entered may decrease due to compression.
(3) III: End of barcode

There must be three backslashes to end 2D barcode.

## Example

Refer to the section "Summary".

## ESC i P QR Code version

| ASCII: | ESC | i | $P$ | $n$ |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 50 | $n$ |

## Parameters

$0 \leq n \leq 40$

## Description

- The barcode size can be fixed.
- The default value is 0 (auto).
- The available versions differ depending on the symbol type used.

If a setting other than those listed is specified, the setting returns to its default.
The following settings are available for each symbol type.
Model1 (0-14), Model2 (0-40), MicroQR (0-4)

## ESC i V 2D barcode (PDF417)

| ASCII: | ESC | i | V or v | Data |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 56 or 76 | Data |  |  |
| Format: | ESC | i | V or v | $\frac{\text { [Parameters] }}{}$ | [Barcode data] | $\frac{\text { III }}{}$ |
|  |  |  |  | $(1)$ | $(3)$ |  |

## Parameters

## (1) [Parameters]

Unlike with 1D barcodes, all parameters must be specified in order, starting from the top.
If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| 1. Cell size |  | Specifies the dot size per cell side. <br> Prints 1 dot per cell side. <br> Prints 2 dots per cell side. <br> Prints 3 dots per cell side. (default value) <br> Prints 4 dots per cell side. <br> Prints 5 dots per cell side. <br> Prints 6 dots per cell side. <br> Prints 8 dots per cell side. <br> Prints 10 dots per cell side. |
| :---: | :---: | :---: |
| 2. Symbol type | [1-byte decimal] 0 <br> [1-byte decimal] 1 <br> [1-byte decimal] 2 <br> [1-byte decimal] 3 | Standard (default value) <br> Truncate <br> MicroPDF417 standard <br> MicroPDF417 Code128 emulation |
| 3. Data input method | [1-byte decimal] 0 <br> [1-byte decimal] 1 | Auto input (default value) Binary input |
| 4. Error correction capacity-type | [1-byte decimal] 0 <br> [1-byte decimal] 1 | Level input setting (default value) Percentage input setting |
| 5. Error correction capacity-value |  |  |
|  | [2-byte decimal] 0-8 | Specifies the level. <br> (The default value is 0 .) |
| - Percentage input | [2-byte decimal] 0-400 | Specifies the percentage. (The default value is 10 .) |
| 6. Symbol size (X direction) | [1-byte decimal] 0 <br> [1-byte decimal] 1-30 <br> *0 and 1-4 with MicroPDF417 | Auto setting (default value) Manual settings |
| 7. Symbol size (Y direction) | [1-byte decimal] 0 <br> [1-byte decimal] 3-90 <br> *0 and 4-44 with MicroPDF417 | Auto setting (default value) Manual settings |

| 8. Aspect <br> value | [2-byte decimal] 1-1000 | Specifies the aspect value. <br> Actually, this is $0.01-10.0$, but since the decimal <br> point cannot be entered, a value multiplied by 100 is <br> entered. <br> The default value is 50. (The actual value is 0.5.$)$ |
| :--- | :--- | :--- |

## Note

* Some barcode readers cannot recognize a barcode with the cell size specified as 1 dot or 2 dots.
* If a setting for the symbol size ( X direction) or symbol size ( $Y$ direction) has been specified manually, the aspect value setting is ignored.
* If a setting for the symbol size ( $X$ direction) or the symbol size ( $Y$ direction) has been entered manually, the bar code may not be printed or an unreadable bar code may be printed.
* If both a large cell size and a high level error correction capacity have been specified, printing may not be possible due to a full print buffer.

## [With symbol type MicroPDF417]

* Since the error correction capacity is automatically determined from the symbol size ( $X$ direction) setting, the settings for "error correction capacity and type" and "error correction capacity-value" are ignored.
* The aspect value setting is ignored.
* The following table shows the values available for the symbol size ( Y direction) according to the symbol size ( $X$ direction) setting. If an invalid setting is specified for the symbol size ( $Y$ direction), the default setting is specified.

| Symbol Size (X Direction) | Symbol Size (Y Direction) |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Auto | Auto |  |  |  |  |  |  |  |  |  |  |  |
| 1 | Auto | 11 | 14 | 17 | 20 | 24 | 28 |  |  |  |  |  |
| 2 | Auto | 8 | 11 | 14 | 17 | 20 | 23 | 26 |  |  |  |  |
| 3 | Auto | 6 | 8 | 10 | 12 | 15 | 20 | 26 | 32 | 38 | 44 |  |
| 4 | Auto | 4 | 6 | 8 | 10 | 12 | 15 | 20 | 26 | 32 | 38 | 44 |

## (2) Barcode data

The numbers of barcode data characters that can be entered are as follows.
1850 alphanumeric characters, 2710 numbers, 1108 binary bytes

## Note

The numbers listed above are for an error correction level at a high-density level ( $\mathrm{L} \%$ ). If the standard level or higher is set, the number of characters that can be entered may decrease. In addition, even if the characters are entered with the high-density level (L) specified, the number of characters that can be entered may decrease due to compression.
[With symbol type MicroPDF417]
Maximum of 250 alphanumeric characters, maximum of 366 numbers, maximum of 150 bytes of binary data

However, the following table shows the maximum amount of information allowed according to the settings for symbol size ( X direction) and symbol size ( Y direction).

| X | Y | Maximum Amount of Information Allowed |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Alphanumeric Characters | Numbers | Binary |
| 1 | 11 | 6 | 8 | 3 |
| 1 | 14 | 12 | 17 | 7 |
| 1 | 17 | 18 | 26 | 10 |
| 1 | 20 | 22 | 32 | 13 |
| 1 | 24 | 30 | 44 | 18 |
| 1 | 28 | 38 | 55 | 22 |
| 2 | 8 | 14 | 20 | 8 |
| 2 | 11 | 24 | 35 | 14 |
| 2 | 14 | 36 | 52 | 21 |
| 2 | 17 | 46 | 67 | 27 |
| 2 | 20 | 56 | 82 | 33 |
| 2 | 23 | 64 | 93 | 38 |
| 2 | 26 | 72 | 105 | 43 |
| 3 | 6 | 10 | 14 | 6 |
| 3 | 8 | 18 | 26 | 10 |
| 3 | 10 | 26 | 38 | 15 |
| 3 | 12 | 34 | 49 | 20 |
| 3 | 15 | 46 | 67 | 27 |
| 3 | 20 | 66 | 96 | 39 |
| 3 | 26 | 90 | 132 | 54 |
| 3 | 32 | 114 | 167 | 68 |
| 3 | 38 | 138 | 202 | 82 |
| 3 | 44 | 162 | 237 | 97 |
| 4 | 4 | 14 | 20 | 8 |
| 4 | 6 | 22 | 32 | 13 |
| 4 | 8 | 34 | 49 | 20 |
| 4 | 10 | 46 | 67 | 27 |
| 4 | 12 | 58 | 85 | 34 |
| 4 | 15 | 76 | 111 | 45 |
| 4 | 20 | 106 | 155 | 63 |
| 4 | 26 | 142 | 208 | 85 |
| 4 | 32 | 178 | 261 | 106 |
| 4 | 38 | 214 | 313 | 128 |
| 4 | 44 | 250 | 366 | 150 |

(3) III: End of barcode

There must be three backslashes to end 2D barcodes.

## ESC i D 2D barcode (DataMatrix)

| ASCII: | ESC | i | D or d | data |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 44 or 64 | data |  |  |
| Format: | ESC | i | D or d | [Parameters] | [Barcode data] | $\frac{\text { III }}{}$ |

## Parameters

## (1) [Parameters]

Unlike with 1D barcodes, all parameters must be specified in order, starting from the top.
If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| 1. Cell size | $\begin{array}{ll}\text { [1-byte decimal] } & 1 \\ \text { [1-byte decimal] } & 2 \\ \text { [1-byte decimal] } & 3 \\ \text { [1-byte decimal] } & 4 \\ \text { [1-byte decimal] } & 5 \\ \text { [1-byte decimal] } & 6 \\ \text { [1-byte decimal] } & 8 \\ \text { [1-byte decimal] } & 10\end{array}$ | Specifies the dot size per cell side. <br> Prints 1 dot per cell side. <br> Prints 2 dots per cell side. <br> Prints 3 dots per cell side. (default value) <br> Prints 4 dots per cell side. <br> Prints 5 dots per cell side. <br> Prints 6 dots per cell side. <br> Prints 8 dots per cell side. <br> Prints 10 dots per cell side. |
| :---: | :---: | :---: |
| 2. Symbol type | [1-byte decimal] 0 [1-byte decimal] 1 | ECC200 square (default value) ECC200 rectangular |
| 3. Vertical size |  | [ECC200 square] <br> Vertical no. of cells: AUTO (default value) <br> Vertical no. of cells: 10 cells <br> Vertical no. of cells: 12 cells <br> Vertical no. of cells: 14 cells <br> Vertical no. of cells: 16 cells <br> Vertical no. of cells: 18 cells <br> Vertical no. of cells: 20 cells <br> Vertical no. of cells: 22 cells <br> Vertical no. of cells: 24 cells <br> Vertical no. of cells: 26 cells <br> Vertical no. of cells: 32 cells <br> Vertical no. of cells: 36 cells <br> Vertical no. of cells: 40 cells <br> Vertical no. of cells: 44 cells <br> Vertical no. of cells: 48 cells <br> Vertical no. of cells: 52 cells <br> Vertical no. of cells: 64 cells <br> Vertical no. of cells: 72 cells <br> Vertical no. of cells: 80 cells <br> Vertical no. of cells: 88 cells <br> Vertical no. of cells: 96 cells |

| 3. Vertical size (continued) | (continued from the previous page) |  |
| :---: | :---: | :---: |
|  | [1-byte decimal] 104 | Vertical no. of cells: 104 cells |
|  | [1-byte decimal] 120 | Vertical no. of cells: 120 cells |
|  | [1-byte decimal] 132 | Vertical no. of cells: 132 cells |
|  | [1-byte decimal] 144 | Vertical no. of cells: 144 cells |
|  |  | [ECC200 rectangular] |
|  | [1-byte decimal] 0 | Vertical no. of cells: AUTO (default value) |
|  | [1-byte decimal] 8 | Vertical no. of cells: 8 cells |
|  | [1-byte decimal] 12 | Vertical no. of cells: 12 cells Vertical no. of cells: 16 cells |
|  | [1-byte decimal] 16 |  |
| 4. Horizontal size | [1-byte decimal] x | [ECC200 square] <br> Horizontal no. of cells: Same value as vertical size (x) |
|  |  |  |
|  |  | [ECC200 rectangular] |
|  |  | (1) When the vertical size is AUTO |
|  | [1-byte decimal] 0 | Horizontal no. of cells: AUTO (default value) |
|  |  | (2) When the vertical size is 8 cells |
|  | [1-byte decimal] 18 | Horizontal no. of cells: 18 cells |
|  | [1-byte decimal] 32 | Horizontal no. of cells: 32 cells |
|  |  | (3) When the vertical size is 12 cells |
|  | [1-byte decimal] 26 | Horizontal no. of cells: 26 cells |
|  | [1-byte decimal] 36 | Horizontal no. of cells: 36 cells |
|  |  | (4) When the vertical size is 16 cells |
|  | [1-byte decimal] 36 | Horizontal no. of cells: 36 cells |
|  | [1-byte decimal] 48 | Horizontal no. of cells: 48 cells |
| 5. Reserved | [1-byte decimal] $\times 50$ | 5 bytes of dummy data (0) is sent. |

## Note

Some barcode readers cannot recognize a barcode with the cell size specified as 1 dot or $\mathbf{2}$ dots. If the vertical size is specified as a value other than those listed for ECC200 square, the AUTO setting is selected. If the horizontal size is specified as a value different from the vertical size, the setting is changed to the same value as the horizontal size.

If the vertical or horizontal size for ECC200 rectangular is specified as a value other than those listed, the AUTO setting is selected.

## (2) [Barcode data]: Barcode data

The maximum number of barcode data characters that can be entered is listed below.
2335 alphanumeric characters, 3116 numbers, 1556 bytes of binary data

## Note

The numbers of characters that can be entered (as listed above) are for the maximum vertical $\times$ horizontal cell settings ( 144 cells $\times 144$ cells). The number of characters that can be entered may decrease, depending on the specified settings.
(3) III: End of barcode

There must be three backslashes to end 2D barcodes.

## Example

For data "12345" with symbol type ECC square at $40 \times 40$ with a 3 -dot cell size, the command will be as shown below.

ESC i D 03h 00h 28h(40d) 28h 00h 00h 00h 00h 00h " 12345 " III

## ESC i M 2D barcode (MaxiCode)

| ASCII: | ESC | i | M or m | data |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hexadecimal: | 1B | 69 | 4 D or 6D | data |  |  |  |
| Format: | ESC | i | M or m | [Parameters] | 1 | [Barcode data] | III |
|  |  |  |  | (1) | (2) | (3) | (4) |

## Parameters

(1) [Parameters]

If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| 1. Symbol <br> type |   <br> [1-byte decimal] 0 <br> [1-byte decimal] 1 | Standard <br> [1-byte decimal] | 2 |
| :--- | :--- | :--- | :--- |

(2) <br>(backslash)

Separator between parameters and barcode data
(3) [Barcode data]: Barcode data

The number of barcode data characters that can be entered is listed below.

| Symbol Type | Maximum Amount of Information Allowed |  |
| :---: | :---: | :---: |
|  | Alphanumeric Characters | Numbers |
| Standard | 93 | 138 |
| Full EEC | 77 | 113 |
| Structured carrier message | 84 | 126 |

## Note

The numbers of characters that can be entered (as listed above) are for when using only the common character set (code set A in the MaxiCode specifications). The number of characters that can be entered may decrease, depending on the characters that are used.

When the symbol type is the structured carrier message, the service class, country code and postal code can be specified separately from the normal data. Specify each value, separated by a backslash and comma ( $\backslash$, ), immediately before the normal data.

```
<postal_code>\,<country_code>\,<service_class>\,<normal_barcode_data>
```

When " $\backslash$," is not used three times, the data is written as shown in the following example.

If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| Postal code | 9 or less numbers, or <br> 6 or less alphanumeric characters | Ignored when not structured carrier message. <br> Default value: $\mathbf{0 0 0 0 0 0 0 0 0}$ |
| :--- | :--- | :--- |
| Country code | 3 or less numbers | Ignored when not structured carrier message. <br> Default value: 000 |
| Service class | 3 or less numbers | Ignored when not structured carrier message. <br> Default value: $\mathbf{0 0 0}$ |

## Note

If the postal code is specified as alphanumeric characters, characters other than those listed below are invalid.

A to Z " \# \$ \% \& ' ( ) * + , . 1 to 9 :
However, lowercase letters ( $\mathbf{a}$ to $\mathbf{z}$ ) are converted to the valid uppercase letters ( $A$ to $Z$ ).

## (4) III: End of barcode

There must be three backslashes to end 2D barcodes.

## ESC i J 2D barcode (Aztec)

| ASCII: | ESC | i | J or $j$ | data |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 4 A or 6 A | data |  |  |
| Format: | ESC | i | J or j | [Parameters] | [Barcode data] | $\frac{\text { III }}{}$ |
|  |  |  |  | $(1)$ | $(2)$ | $(3)$ |

## Parameters

## (1) [Parameters]

If a value other than those listed is entered for a parameter, that parameter is specified with its default value.

| 1. Cell size | $\begin{array}{ll}{[1 \text {-byte decimal] }} & 1 \\ {[11-\text { byte decimal] }} & 2 \\ \text { [1-byte decimal] } & 3 \\ {[1-\text { byte decimal] }} & 4 \\ {[1-\text { byte decimal] }} & 5 \\ {[1-\text { byte decimal] }} & 6 \\ {[1-\text { byte decimal] }} & 8 \\ {[1 \text {-byte decimal] }} & 10\end{array}$ | Specifies the dot size per cell side. <br> Prints 1 dot per cell side. <br> Prints 2 dots per cell side. <br> Prints 3 dots per cell side. (default value) <br> Prints 4 dots per cell side. <br> Prints 5 dots per cell side. <br> Prints 6 dots per cell side. <br> Prints 8 dots per cell side. <br> Prints 10 dots per cell side. |
| :---: | :---: | :---: |
| 2. Symbol type | [1-byte decimal] 0 [1-byte decimal] 1 [1-byte decimal] 2 | Full range (default value) Compact Auto setting |
| 3. Error correction capacity | [1-byte decimal] 1-99 | Percentage (default value is 23 ) |
| 4. Symbol size | [Full range] <br> [1-byte decimal] 0 <br> [1-byte decimal] 4-32 | Auto setting (default value) Manual settings |
|  | [Compact] <br> [1-byte decimal] 0 <br> [1-byte decimal] 1-4 | Auto setting (default value) Manual settings |
|  | Note: Symbol size is fixed as AUTO when Symbol type is specified as AUTO. |  |
| 5. Structured Append setting | $\begin{array}{\|ll} \hline \text { [1-byte decimal] } & 0 \\ \text { [1-byte decimal] } & 1 \\ \text { [1-byte decimal] } & 2 \end{array}$ | Not partitioned. (default value) <br> Partitioned <br> Partitioned Specify the number of blocks |
| 6. Number of blocks | [1-byte decimal] 2-26 | Partitioned Only valid when the number of blocks is specified (Default it 2) |
| 7. Message ID | Character string (Terminal value is 00 h ) | Invalid when append setting 0. |

(2) [Barcode data]: Barcode data

The maximum number of barcode data characters that can be entered is listed below.
3067 alphanumeric characters, 3832 numbers, 1914 bytes of binary data

## Note

The number of characters shown above is only for the Full-Range mode and varies depending on setting.
(3) III: End of barcode

There must be three backslashes to end 2D barcodes.

## ESC i G Specify font

| ASCII: | ESC | i | G | 00 h 1 | data |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 47 | 00 n 1 | data |

## Parameters

$1 \leq n 1 \leq 16$

## Description

- Specify font
$\mathrm{n} 1: \quad$ Specify the length of character string of specified font name.
Data: Character string of font name.

## Example

For specifying "HelOb.FNT".
ESC i G 00h 09h HelOb.FNT

## ESC i F P Print downloaded data

| ASCII: | ESC | i | F | $P$ | $n$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 46 | 50 | $n$ |

## Parameters

n : Minus 1 from the key number assigned when transport the data.
$0 \leq n \leq 254$

## Description

- Print a transferred image on a current print position.
- If there is no image data, this command is ignored.

Example: Combination of text and downloaded image

- As with text, if the image data does not all fit on the current line, an automatic line feed is performed, and the data is placed at the beginning of the next line. At that time, the any data that does not fit in the print area is deleted.

1. The text is entered.
2. Since the image does not fit, it is pasted in after an automatic line feed.
Example: Normal size

Example: Image larger than the distance between left and right margins

- If the result of pasting in the downloaded image extends beyond the bottom margin position, the image is pasted in after a page feed. At that time, the any data that does not fit in the print area is deleted.

Example: Image smaller than the distance between the top and bottom margins

Example: Image larger than the distance between top and bottom margins

- An image data used by "ESC i F P" has to be registered into a printer first. Use P-touch Transfer Manager for transferring the BMP file to a printer for image data registration. A maximum size of memory is different from each model. Please refer to Appendix A: Specifications for model-specific information.
- Image data larger than the media size is handled by deleting the portion of the image that does not fit within the size of the media.

The portion of image data deleted depends on the media orientation.

## ESC i a Switch command mode

| ASCII: | ESC | i | a | $n$ |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 61 | $n$ |

## Parameters

n : Command mode
00h or 30h ('0’): ESC/P Legacy / Raster mode
03h or 33h ('3'): P-touch Template mode
04h or 34h ('4'): ESC/P Brother mode
FFh: Switch to the initial mode (power-on default)

## Description

- Switches the command execution mode.
- Dynamically switches between the five modes.
- Since this is a dynamic command, after the printer is turned off and on again, the setting returns to the previously setting.
- Invalid if n is a value outside of the allowable range.

## ESC i S Status information request

| ASCII: | ESC | i | S |
| :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 53 |

## Parameters

None

## Description

- Returns the printer status. The printer status consists of 32 bytes.
- The printer does not return status during the printing operation.

| Offset | Name | Value/Standard |
| :---: | :---: | :---: |
| 0 | Print head mark | Fixed at 80h |
| 1 | Size | Fixed at 20h |
| 2 | Brother code | Fixed at "B" (42h) |
| 3 | Series code | Fixed at "6" (36h) |
| 4 | Model code | PJ-822: Fixed at "C" (43h) <br> PJ-823: Fixed at "D" (44h) <br> PJ-862: Fixed at "E" (45h) <br> PJ-863: Fixed at "F" (46h) <br> PJ-883: Fixed at "G" (47h) |
| 5 | Country code | Fixed at "0" (30h) |
| 6 | Power status | Refer to table (5) below. |
| 7 | Reserved | Fixed at 00h |
| 8 | Error information 1 | Refer to table (1) below. |
| 9 | Error information 2 | Refer to table (2) below. |
| 10 | Media width | Refer to table (6) below. |
| 11 | Media type | Refer to table (3) below. |
| 12 | Number of colors | Fixed at 00h |
| 13 | Media length (higher order bytes) | Fixed at 00h |
| 14 | Media sensor value | Not used |
| 15 | Mode | Fixed at 01h |
| 16 | Density | Fixed at 00h |
| 17 | Media length (lower order bytes) | Fixed at 00h |
| 18 | Status type | Refer to table (4) below. |
| 19 | Phase type | Refer to table (7) below. |
| 20 | Phase number (higher order bytes) | Fixed at 00h |
| 21 | Phase number (lower order bytes) | Fixed at 00h |
| 22 | Notification number | Not used |
| 23 | Expansion area (number of bytes) | Fixed at 00h |
| 24-31 | Reserved | Fixed at 00h |

(1) Error information 1

| Flag | Mask |  |
| :--- | :--- | :--- |
| Bit 0 | 01 h | Not used |
| Bit 1 | 02 h | Not used |
| Bit 2 | 04 h | Not used |
| Bit 3 | 08 h | Not used |
| Bit 4 | 10 h | Printer in use |
| Bit 5 | 20 h | Printer turned off |
| Bit 6 | 40 h | Not used |
| Bit 7 | 80 h | Not used |

(2) Error information 2

| Flag | Mask |  |
| :--- | :--- | :--- |
| Bit 0 | 01 h | Not used |
| Bit 1 | 02 h | Not used |
| Bit 2 | 04 h | Communication error |
| Bit 3 | 08 h | Not used |
| Bit 4 | 10 h | Not used |
| Bit 5 | 20 h | Not used |

| Bit 7 | 80 h | Not used |

(3) Media type

| Media Type | Value | Remarks |
| :--- | :--- | :---: |
| No Paper | 00 h |  |
| Loaded Paper | 01 h |  |

(4) Status type

| Status Type | Value | Remarks |
| :--- | :--- | :---: |
| Reply to status request | 00 h |  |
| (Not used) | 01 h |  |
| Error occurred | 02 h |  |
| (Not used) | $03 \mathrm{~h}-$ FFh |  |

(5) Power status

| Value | Battery level |  |
| :--- | :--- | :--- |
| 20 h | Full | Not connected |
| 22 h | Half | Not connected |
| 23 h | Low | Not connected |
| 24 h | Charging required | Not connected |
| 30 h | Full | Connected |
| 32 h | Half | Connected |
| 33 h | Low | Connected |
| 34 h | Charging required | Connected |
| 37 h | No battery | Connected |
| Other | Undefined | Undefined |

(6) Media width

| Media width | Value | Remarks |
| :--- | :--- | :--- |
| No Paper | 00h |  |
| Loaded Paper | D2h |  |

(7) Phase type

| Phase type | Value | Remarks |
| :--- | :--- | :--- |
| Idle | 00 h |  |
| Printing | 01 h |  |

## ESC i L Specify landscape orientation

| ASCII: | ESC | i | $L$ | $n$ |
| :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | $4 C$ | $n$ |

## Parameters

$\mathrm{n}=0,1$ or 48,49

## Description

- Applies or cancels the landscape orientation
$\mathrm{n}=1$ or 49 (" 1 "): Applies the landscape orientation.
$\mathrm{n}=0$ or 48 ("0"): Cancels the landscape orientation.
- Using this command clears all text.
- Before entering text, specify the paper orientation with this command.
- The setting specified by "ESC iXL2"(default landscape setting) is valid for the landscape orientation when the printer is turned on.

### 5.10 Advanced static commands

## ESC iXQ2 Select default character style

| ASCII: | ESC | i | X | Q | 2 | 01 h | $00 h$ | n1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 51 | 32 | 01 | 00 | n1 |

## Parameters

$00 h \leq n 1 \leq 04 h$

## Description

- Selects the default character style.

```
n1=00h: None (normal characters) (*Manufacturer's default)
n1=01h: Bold
n1=02h: Outline
n1=03h: Shadow
n1=04h: Shadow and outline
```

- This command is a static command.

## Remarks

- Invalid if n 1 is a value other than 00 h through 04 h

## ESC iXQ1 Retrieve default character style

| ASCII: | ESC | i | X | Q | 1 | 00 h | 00 h |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 51 | 31 | 00 | 00 |

## Parameters

None

## Description

- The default character style setting is returned as 3-byte data.

| [1] | 01h (Fixed) |
| :---: | :---: |
| [2] | 00h (Fixed) |
| [3] | Setting <br> 00h: None (normal characters) <br> 01h: Bold <br> 02h: Outline <br> 03h: Shadow <br> 04h: Shadow and outline |

- The retrieved value is a value specified by a static command.

## ESC iXk2 Select default font

| ASCII: | ESC | i | X | k | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 6 B | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 05 h, 08 h \leq n 1 \leq 0 B h$

## Description

- Selects the default font.
n1=00h: Gothic (bitmap)
n1=01h: Letter Gothic Bold (bitmap) (*Manufacturer's default)
n1=02h: Brussels (bitmap)
n1=03h: Helsinki (bitmap)
n1=04h: San Diego (bitmap)
n1 $=05 \mathrm{~h}$ Brougham (bitmap)
$\mathrm{n} 1=08 \mathrm{~h}$ : Gothic (outline)
n1=09h: Letter Gothic (outline)
n1=0Ah: Brussels (outline)
n1=0Bh: Helsinki (outline)
- This command is a static command.

## Remarks

- Invalid if n 1 is a value outside of the allowable range
- Proportional pitched Gothic is forced to be selected when a character assigned from $0 x 80$ to $0 x F F$ in the Japanese character code table is used. If the character size is set to 48dot, it is not printed.
- Please refer to Appendix A: Specifications.

## ESC iXk1 Retrieve default font

| ASCII: | ESC | i | X | $k$ | 1 | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | $6 B$ | 31 | 00 | 00 |

## Parameters

None

## Description

- The default font setting is returned as 3-byte data.

| [1] | 01h (Fixed) |
| :---: | :---: |
| [2] | 00h (Fixed) |
| [3] | Setting <br> 00h: Gothic (bitmap) <br> 01h: Letter Gothic Bold (bitmap) <br> 02h: Brussels (bitmap) <br> 03h: Helsinki (bitmap) <br> 04h: San Diego (bitmap) <br> 05h: Brougham (bitmap) <br> 08h: Gothic (outline) <br> 09h: Letter Gothic (outline) <br> 0Ah: Brussels(outline) <br> OBh: Helsinki (outline) |

- The retrieved value is a value specified by a static command.

## ESC iXX2 Specify default character size

| ASCII: | ESC | i | X | X | 2 | 02 h | 00 h | n 1 | n 2 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 58 | 32 | 02 | 00 | n 1 | n 2 |

## Parameters

$00 h \leq n 1 \leq F F h, 00 h \leq n 2 \leq 01 h$

## Description

- Specifies the default character size.
n1+(n2*256): Default character size (dots)
- The following settings (dots) are valid.

The maximum valid setting is $\mathrm{n}=400$.
*The manufacturer's default is 24 .

- This command is a static command.

## Remarks

- Invalid if the setting is a value outside of the allowable range

## ESC iXX1 Retrieve default character size

| ASCII: | ESC | i | X | X | 1 | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | 58 | 31 | 00 | 00 |

## Parameters

None

## Description

- The default character size setting is returned as 4-byte data.

| $[1]$ | 02 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3,4]$ | n1 n2 settings <br> n1+(n2*256): Default character size (dots) |

- The retrieved value is a value specified by a static command.

## ESC iX32 Specify default line feed

| ASCII: | ESC | i | X | 3 | 2 | $02 h$ | $00 h$ | n1 | n2 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | 33 | 32 | 02 | 00 | n1 | n2 |

## Parameters

$00 h \leq n 1 \leq F F h, 00 h \leq n 2 \leq 02 h$

## Description

- Specifies the default line feed.
n1+(n2*256): Default line feed (dots)
*The manufacturer's default is 32 .
- Specified length is from 0 to 2 inches.
- This command is a static command.

## Remarks

- Invalid if the setting is a value outside of the allowable range

## ESC iX31 Retrieve default line feed

| ASCII: | ESC | i | X | 3 | 1 | OOh | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | 33 | 31 | 00 | 00 |

## Parameters

None

## Description

- The default line feed setting is returned as 4-byte data.

| $[1]$ | 02h (Fixed) |
| :--- | :--- |
| $[2]$ | $00 h$ (Fixed) |
| $[3,4]$ | n1 n2 settings <br> n1+(n2*256): Default line feed (dots) |

- The retrieved value is a value specified by a static command.

## ESC iXA2 Select default alignment

| ASCII: | ESC | i | X | A | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 41 | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 02 h$

## Description

- Selects the default alignment.
$\mathrm{n} 1=00 \mathrm{~h}$ : Left alignment (*Manufacturer's default)
$\mathrm{n} 1=01 \mathrm{~h}$ : Center alignment
n1=02h: Right alignment
- This command is a static command.

## Remarks

- Invalid if n 1 is a value outside of the allowable range

## ESC iXA1 Retrieve default alignment

| ASCII: | ESC | i | X | A | 1 | $00 h$ | 00h |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 41 | 31 | 00 | 00 |

## Parameters

None

## Description

- The default alignment setting is returned as 3-byte data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> 00h: Left alignment <br> 01h: Center alignment <br> $02 h: ~ R i g h t ~ a l i g n m e n t ~$ |

- The retrieved value is a value specified by a static command.

## ESC iX(2 Specify default page length

| ASCII: | ESC | i | X | $($ | 2 | $02 h$ | $00 h$ | n1 | n2 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 28 | 32 | 02 | 00 | n1 | n2 |

## Parameters

$00 h \leq n 1 \leq 20 h, 00 h \leq n 2 \leq 4 E h(f o r ~ 203 d p i ~ p r i n t e r s) ~$
$00 h \leq n 1 \leq 30 h, 00 h \leq n 2 \leq 75 h$ (for $300 d p i$ printers)

## Description

- Specifies the default page length.
$\mathrm{n} 1+(\mathrm{n} 2 * 256)$ : Default page length (dots)
*A default page length 0 indicates the Auto setting.
*The manufacturer's default is 0 .
- Specified length is from 1 to 100 inches.
- This command is a static command.

## Remarks

- Invalid if the setting is a value outside of the allowable range

## ESC iX(1 Retrieve default page length

| ASCII: | ESC | i | X | $($ | 1 | $00 h$ | 00h |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 28 | 31 | 00 | 00 |

## Parameters

None

## Description

- The default page length setting is returned as 4-byte data.

| $[1]$ | 02 h (Fixed) |
| :--- | :--- |
| $[2]$ | $00 h$ (Fixed) |
| $[3,4]$ | $n 1 \mathrm{n} 2$ settings <br> $\mathrm{n} 1+(\mathrm{n} 2 * 256):$ Default page length (dots) <br> *A default page length of 0 indicates the Auto setting. |

- The retrieved value is a value specified by a static command.

## ESC iXL2 Select default landscape orientation

| ASCII: | ESC | i | X | L | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 4 C | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 01 h$

## Description

- Selects the default landscape orientation setting.
$\mathrm{n} 1=00 \mathrm{~h}$ : Cancel landscape orientation (*Manufacturer's default)
$\mathrm{n} 1=01 \mathrm{~h}$ : Apply landscape orientation
- This command is a static command.

## Remarks

- Invalid if n 1 is a value outside of the allowable range

## ESC iXL1 Retrieve default landscape orientation

| ASCII: | ESC | i | X | L | 1 | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | $4 C$ | 31 | 00 | 00 |

## Parameters

None

## Description

- The default landscape orientation setting is returned as 3-byte data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> $00 \mathrm{~h}:$ Cancel landscape orientation <br> $01 \mathrm{~h}:$ Apply landscape orientation |

- The retrieved value is a value specified by a static command.

## ESC $\mathrm{iXj} 2 \quad$ Select default international character set

| ASCII: | ESC | i | X | j | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 6 A | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 0 D h, 40 h$

## Description

- Selects the default international character set.
n1=00h: U.S.A. (*Manufacturer's default)
$\mathrm{n} 1=01 \mathrm{~h}$ : France
n1=02h: Germany
n1=03h: U.K.
n1=04h: Denmark I
n1=05h: Sweden
n1=06h: Italy
n1=07h: Spain I
n1=08h: Japan
n1=09h: Norway
n1=0Ah: Denmark II
$\mathrm{n} 1=0 \mathrm{Bh}$ : Spain II
$\mathrm{n} 1=0 \mathrm{Ch}:$ Latin America
n1=0Dh: South Korea
n1 $=40 \mathrm{~h}$ : Legal
- This command is a static command.

Remarks

- Invalid if n 1 is a value outside of the allowable range

## ESC iXj1 Retrieve default international character set

| ASCII: | ESC | i | X | j | 1 | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | $6 A$ | 31 | 00 | 00 |

## Parameters

None

## Description

- The default international character set setting is returned as 3-byte data.

| [1] | 01h (Fixed) |
| :--- | :--- |
| [2] | 00h (Fixed) |
| $[3]$ | Setting |
|  | 00h: U.S.A. |
|  | 01h: France |
|  | 02h: Germany |
|  | 03h: U.K. |
|  | 04h: Denmark I |
|  | 05h: Sweden |
|  | 06h: Italy |
| 07h: Spain I |  |
| 08h: Japan |  |
| 09h: Norway |  |
| 0Ah: Denmark II |  |
| 0Bh: Spain II |  |
| 0Ch: Latin America |  |
| 0Dh: South Korea |  |
| 40h: Legal |  |

- The retrieved value is a value specified by a static command.

## ESC iXm2 Select default character code set

| ASCII: | ESC | i | X | m | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 6 D | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 04 h$

## Description

- Selects the default character code set.
$\mathrm{n} 1=00 \mathrm{~h}:$ Standard character code set (*Manufacturer's default)
$\mathrm{n} 1=01 \mathrm{~h}$ : Eastern European character code set
n1 $=02 \mathrm{~h}$ : Western European character code set
n1=03h: Reserved
$\mathrm{n} 1=04 \mathrm{~h}$ : Japanese character code set
n3=0Ch: Cyrill character code set
- This command is a static command.

## Remarks

- Invalid if n is a value outside of the allowable range.

## ESC iXm1 Retrieve default character code set

| ASCII: | ESC | i | X | $m$ | 1 | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | $1 B$ | 69 | 58 | $6 D$ | 31 | 00 | 00 |

## Parameters

None

## Description

- The default character code set setting is returned as 3-byte data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> 00h: Standard character code set <br> $01 \mathrm{~h}:$ Eastern European character code set <br> 02h: Western European character code set <br> 03h: Reserved <br> 04h: Japanese character code set <br>  <br> $0 C h: C y r i l l ~ c h a r a c t e r ~ c o d e ~ s e t ~$ |

- The retrieved value is a value specified by a static command.

## ESC iXE2 Specify barcode margin setting

| ASCII: | ESC | i | X | E | 2 | 01 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 45 | 32 | 01 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq 01 h$

## Description

- Select an existence of barcode margin.
$\mathrm{n} 1=00 \mathrm{~h}$ : No margin
$\mathrm{n} 1=01 \mathrm{~h}$ : Add margin (*Manufacturer's default)
- This command is a static command.

## Remarks

- Invalid if n 1 is a value outside of the allowable range

## ESC iXE1 Retrieve barcode margin setting

| ASCII: | ESC | i | X | E | 1 | $00 h$ 00h |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | 45 | 31 | $00 h$ | $00 h$ |

## Parameters

None

## Description

- Return a barcode margin setting as 3 Bytes data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> $00 \mathrm{~h}:$ No margin <br> $01 \mathrm{~h}:$ Add margin |

- The retrieved value is a value specified by a static command.

## ESC iX 2 (00h) Specify line print setting

| ASCII: | ESC | i | X | - | 2 | 03 h | 00 h | 00 h | 00 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 5 F | 32 | 03 | 00 | 00 | 00 | n 1 |

## Parameters

$00 h \leq n 1 \leq F F h$

## Description

- Select a line print enable/disable setting.
$\mathrm{n} 1=00 \mathrm{~h}: \quad$ Enable line print (default)
$\mathrm{n} 1=01 \mathrm{~h} \sim \mathrm{FFh}$ : Disable line print
- This command is a static command.
- This command is available only with continuous length tape.

## ESC iX 1 (00h) Retrieve line print setting

| ASCII: | ESC | i | X | - | 1 | $02 h$ | $00 h$ | $00 h$ | $00 h$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1B | 69 | 58 | $5 F$ | 31 | 02 | 00 | 00 | 00 |

## Parameters

None

## Description

- Return a line print enable/disable setting as 3 Bytes data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> $00 \mathrm{~h}:$ Line print enabled <br> $01 \mathrm{~h} \sim$ FFh: Line print disabled |

- The retrieved value is a value specified by a static command.

## ESC iX 2 (01h) Specify line print timeout setting

| ASCII: | ESC | i | X | - | 2 | 03 h | 00 h | 00 h | 01 h | n 1 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 5 F | 32 | 03 | 00 | 00 | 01 | n 1 |

## Parameters

$00 h \leq n 1 \leq F F h$

## Description

- Set a time for print start after receiving line feed command.

$$
\begin{array}{ll}
\mathrm{n} 1=00 \mathrm{~h}: & 1000 \mathrm{msec} \text { (default) } \\
\mathrm{n} 1=01 \mathrm{~h} \sim \mathrm{FFh}: & \text { Specified value } \times 100 \mathrm{msec}
\end{array}
$$

- This command only works when line print is enabled.
- This command is a static command.

## ESC iX 1 ( 01 h ) Retrieve line print timeout setting

| ASCII: | ESC | i | X | - | 1 | 02 h | 00 h | 00 h | 01 h |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Hexadecimal: | 1 B | 69 | 58 | 5 F | 31 | 02 | 00 | 00 | 01 |

## Parameters

None

## Description

- Return a time for print start after receiving line feed command as 3 Bytes data.

| $[1]$ | 01 h (Fixed) |
| :--- | :--- |
| $[2]$ | 00 h (Fixed) |
| $[3]$ | Setting <br> $00 \mathrm{~h}: 1000 \mathrm{msec}$ <br> $01 \mathrm{~h} \sim$ FFh: Retrieved value $\times 100 \mathrm{msec}$ |

- The retrieved value is a value specified by a static command.

## Note

＂＂indicates that a space is printed．
＂$\square$＂indicates that the character will switch when the international character set is changed．
A character assigned from $0 \times 80$ to $0 \times F F$ is printed as Proportional pitched Gothic．
（5）Windows 1251 （Cyrill character code set）
