Specific absorption rate (SAR)

YOUR DEVICE MEETS INTERNATIONAL GUIDELINES FOR EXPOSURE TO RADIO WAVES.

Your device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) recommended by international guidelines. The guidelines were developed by an independent scientific organization (ICNIRP) and include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. Refer to the following for 10g SAR limit and maximum reported SAR values:

Item	Body-worn SAR	Limb SAR
10g SAR limit	2 W/kg	4 W/kg
Maximum SAR with 0 mm separation distance (14-inch models)	0.926 W/kg	0.926 W/kg
Maximum SAR with 0 mm separation distance (15-inch models)	1.108 W/kg	1.108 W/kg
Maximum SAR with 0 mm separation distance (IdeaPad 3 17ALC6)	1.010 W/kg	1.010 W/kg
Maximum SAR with 0 mm separation distance (IdeaPad 3 17ITL6)	1.064 W/kg	1.064 W/kg

Where possible, your radio device should be used on a table, desk or tray, which also assists ventilation. To limit exposure from radio waves, use the device under good radio signal conditions and keep the antennas furthest from your body and that of other people. Refer to the *User Guide* of your product to view the locations of the antennas. Pregnant

women should keep the antennas away from their stomach and adolescences away from their lower abdomen.

Wearers of electronic implant devices (pacemakers, insulin pumps, neurostimulators, etc.) should maintain a distance greater than 15 centimeters between the radio device and the implant device.

Obey all local restrictions when using your device in public areas, such as hospitals, airplanes, or schools.
