K120 Laptop

OFFICE DOCK USER GUIDE

1. Introduction

The office dock duplicates most of your computer's ports and provides extra ports. With peripherals such as a keyboard, mouse, monitor, and printer all connected to the office dock, you have a handy work area on your desk.

2. Docking and Undocking

Docking

1. Align and fit the rear of the Keyboard Dock (with or without the Tablet) to the office dock at angle (❶). Then, press down the Keyboard Dock (❷). The release latch should click into the locked position.

NOTE: Before docking the “Keyboard Dock + Tablet” set, make sure the display (i.e. the Tablet) is closed.

2. Connect the peripherals' cables to the corresponding connectors on the office dock.
3. Connect the AC adapter to the office dock (❶). Connect the power cord, one end to the AC adapter and the other end to an electrical outlet (❷).

The DC-In LED lights up, indicating power is connected.

4. To power on, you can press either the power button of K120 or the power button of the dock.

NOTE: The power button of the office dock is equivalent to the power button of K120, meaning it works in the same way.

Undocking

Press the release latch (❶) so the front of K120 slightly pops up. Then detach K120 from the dock (❷).

3. Notes and Precautions

- **About PowerShare (⚡)**
To use the USB charging feature, you must first enable the feature on K120. When K120 is docked, a connected mobile device will be charged even if K120 is in power-off (with one exception), sleep, or hibernation state. The exception is when AC power is not connected. See *K120 User Manual* for more information.
- **DO NOT** touch the connectors of the office dock.
- **DO NOT** attempt to make connections if there is any object between the computer and the office dock. Doing so could damage the computer and the office dock.
- **DO NOT** attempt to move the office dock when it is connected to the computer.
- If the computer malfunctions while the office dock is connected, turn off the computer and disconnect the office dock. Connect the AC adapter to the computer and check to see if the computer operates normally. If the computer operates normally, the office dock may be malfunctioning.
- **DO NOT** place metal objects or containers of liquid on top of the office dock. If metal objects (such as paper clips and coins) or any liquid spills get inside the office dock, fire or electric shock may result. Immediately unplug the power cable and remove the computer from the office dock.
- Unplug the power cord and remove the computer from the office dock if any of the following occurs:
 - the office dock is damaged
 - smoke is emitted
 - an unusual smell is emitted
 - the office dock is unusually hotContinuing to use the office dock while any of the above conditions are present may result in fire or electric shock.
