

VENT BLOCKER KIT, DRK SERIES

VBK-DRK |

FEATURES & BENEFITS

Vent blockers are used to prevent the recirculation of hot air between top-mount fans and nearby vent openings. Vent blockers should be placed over the enclosure's vents located on the upper front of the enclosure, upper sides, and upper rear door (depending on enclosure). This will ensure that heated enclosure air will be forced out through the top-mounted exhaust fans instead of re-circulating, keeping equipment cool.

- Magnetized vent blocker kits promote proper active thermal management
- Vent blockers prevent cooling air “short circuits” when using fans
- Vent blocker kits are sized for immediate use without trimming
- Includes the needed pieces to block rear door vents

SPECIFICATIONS

GENERAL INFO

Finish: Black
Component Type: active

LISTING AGENCIES/THIRD PARTY CERTIFICATIONS

RoHS: Yes
Greenguard: Yes
