

# DXT Mouse 2

Feel The Difference

*“The DXT looks a lot different from other mice but it’s not until you use the DXT that you start to appreciate its benefits.”*

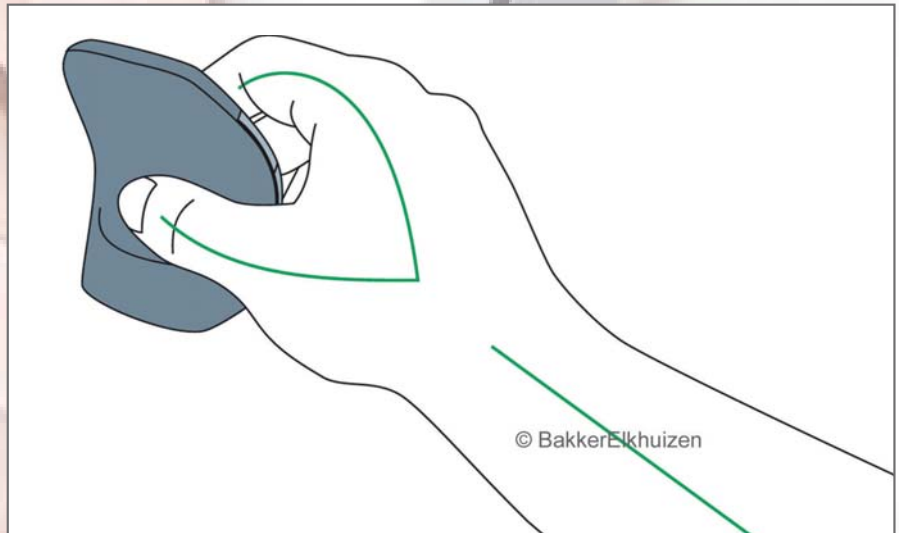

**Fast and Precise** The DXT enables greater precision and control over the cursor which approximates to that of a stylus.

**Easily lifted** The DXT is easily lifted with negligible pinch force, which enables the user to efficiently and effectively move the cursor over large distances with a series of “little scoots” over a very small area of desk.

**Comfortable** To maximize comfort the DXT uses soft touch buttons and encourages neutral hand and wrist postures to allow the most natural movement patterns of the upper limb.

**Left or right handed use** The DXT allows easy switching between left and right hands via the press of a single button without the need to adjust the settings of your computer.

**Works in small work spaces** The DXT operates effectively on a very small surface area, which reduces reach and related shoulder/neck issues.

# DXT Mouse 2

Feel The Difference

*“From a functional viewpoint the ability to (effortlessly) lift a mouse adds to its versatility. The DXT is extremely light weight and because of its shape can be lifted with less pinch force than a button click.”*

## Recharges whilst in use

The Wireless DXT can be used while it is recharging. The supplied recharging cable is connected between a USB port of your computer and the DXT's micro USB socket.

**4 DPI settings** The DXT has four DPI settings (dots per inch) 500, 1000, 1500 and 2000. This allows you to make quick adjustments to cursor speed while accuracy is maintained.

**Multi screen use** The DXT enables the user to efficiently and effectively move the cursor over large distances to take advantage of the benefits of using two screens.

**Wired and Wireless** The DXT is available in both wired and wireless. The wireless version has an on off switch which enables the user to prolong stand by time between charges.

**Plug and Play** The DXT wired and wireless versions are plug and play devices. No software drivers are required and both versions are PC and MAC compatible.

Wired Part #: PD7DXT  
Wireless Part #: PD7DXT-WR
