ELITE

A MASTERPIECE OF ENGINEERING

For years, the name Elite has been synonymous with the industry's reference standard for the perfect television picture. Blacks so deep, they disappear into the bezel. Whites so bright, they burn your retina. And what will seem like an infinite range of colors in between, thanks to the addition of yellow pixels to the standard RGB pixels others are so content with. We are proud to introduce our biggest and most breathtaking television ever in LCD. It will make other televisions on the market today seem old and unrefined. It will once again become the standard by which all televisions are judged.

ELITE RECEIVERS

Class D amplifiers work in an entirely different way than A, B, or A/B amplifiers. The output transistors don't partially open and close in a continuously variable manner; they switch on or off! they can dramatically increase the mid and bass output power while minimizing the loss of power, making for a highly efficient amplifier.
