

# Health Check for EcoStruxure™ IT

Your IT and data center environments evolve quickly. Small configuration changes, outdated firmware, or unnoticed issues can compromise performance and reliability. The **Health Check** proactively identifies risks and improvement opportunities, ensuring your **EcoStruxure IT** deployment continues to operate at peak efficiency.

## Key Benefits

### Proactive maintenance

Identify and resolve potential issues before they impact operations.

### Enhanced reliability

Validate software versions, firmware updates, and alarm configurations.

### Customized optimization

Recommendations to improve monitoring and response strategies.

### Future-ready

Ensure compliance with the latest updates and best practices.

Optimize performance. Strengthen reliability. Prevent issues before they impact operations.

## What's included

### Pre-Assessment & Review

Specialists evaluate architecture, deployment design, and system readiness.

### Configuration Validation

Verification of alarm thresholds, device profiles, monitoring logic, and system settings.

### Firmware & Software Verification

Checks against the latest supported releases to ensure your environment is current and secure.

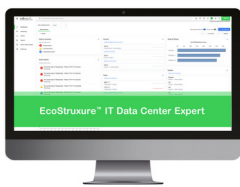

### Actionable Recommendations

Receive recommendations with actionable insights.

### Post-Review Consultation

A walkthrough of findings and guidance on implementing improvements.

Schneider Electric's **Health Check Services for Data Center Expert, NetBotz** and **IT Advisor** deliver proactive preventive maintenance, comprehensive review, and configuration updates to keep your systems secure, reliable, and up-to-date.

## Offer Overview

### Data Center Expert Health Check

- System assessment: server health and firmware updates.
- Device discovery validation and polling performance review.
- Alarm policies, notification paths, and escalation tuning.
- Backup verification and upgrade readiness.
- Best-practice guidance and recommendations.

### NetBotz Health Check\*

- Verification of software version and settings.
- Alarm threshold and alarm profile customization.
- Firmware updates for accessible devices; guidance for remote units.
- Alerting tests (up to 5) and documentation of results.
- Questions & answers session with expert recommendations.

\*The Netbotz Health Check is recommended for standalone Netbotz solutions without a Data Center Expert

### IT Advisor Health Check

- Model integrity check: racks, assets, capacities, and power path.
- Capacity planning and efficiency insights.
- Backup verification and upgrade readiness.
- Best-practice guidance and recommendations.
