# CONTENTS

# **OVERVIEW**

The UCS C240 M4 LFF server is the newest 2-socket, 2U rack server from Cisco, designed for both performance and expandability over a wide range of storage-intensive infrastructure workloads from big data to collaboration.

The enterprise-class UCS C240 M4 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 2U form factor with the addition of the Intel® Xeon E5-2600 v3 series processor family that delivers the best combination of performance, flexibility and efficiency gains. In addition, the UCS C240 M4 LFF server provides 24 DIMM slots, up to 6 PCI Express (PCIe) 3.0 slots, up to 12 front-loading LFF drives plus two (optional) internal SFF SATA boot drives for a total of 14 internal drives.

The C240 M4 server includes a modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC) without consuming a PCI slot in addition to 2 x 1 GbE embedded (on the motherboard) LOM ports. These features combine to provide outstanding levels of internal memory and storage expandability along with exceptional performance.

The Cisco UCS C240 M4 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

| 6 | 1-Gb dedicated management port                                                                             |    | _                                                                          |  |

Notes . . .

1. For serial port pinout details, see *Serial Port Details*, page 73

# BASE SERVER STANDARD CAPABILITIES and FEATURES

*Table 1* lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in *CONFIGURING the SERVER*, page 12.

Table 1 Capabilities and Features

| Capability/Feature            | Description                                                                                                                                                                                                                                                                 |  |  |  |  |  |

# Capability/Feature Description Drives are installed into front-panel drive bays that provide hot-pluggable access. Internal storage devices ■ Large Form Factor (LFF) drives. The server can hold up to 12 3.5-inch SAS hard disk drives (HDDs). The server uses a 12-drive backplane with a SAS expander. Additionally, two optional internal 2.5 inch SATA SSDs can be installed for booting an OS. ■ The server also contains one internal USB 3.0 port on the motherboard that you can use with an optional 16 GB USB thumb drive for additional storage ■ UCS Storage Accelerators are also available. These plug-in PCIe flash storage cards provide independent high-speed storage. Cisco Flexible Flash The server supports up to two internal 32 GB or two internal 64 GB Cisco Flexible drives Flash drives (SD cards). The second SD card is blank and can be used to mirror the first SD card. It can be used to protect the Hypervisor Partition with RAID1. Interfaces Rear panel One DB15 VGA connector • One RJ45 serial port connector Two USB 3.0 port connectors • One RJ-45 10/100/1000 Ethernet management port, using Cisco Integrated Management Controller (CIMC) firmware • Two Intel i350 embedded (on the motherboard) GbE LOM ports • One flexible modular LAN on motherboard (mLOM) slot that can accommodate various interface cards ■ Various PCIe card ports (dependent on which cards are installed) Virtual Interface Card (VIC) ports Converged Network Adapter (CNA) ports Network Interface Card (NIC) ports Host Bus Adapter (HBA) ports Front panel • One KVM console connector (supplies two USB 2.0 connectors, one VGA DB15 video connector, and one serial port (RS232) RJ45 connector) Power subsystem Up to two of the following hot-swappable power supplies: ■ 650 W (AC) ■ 930 W (DC) ■ 1200 W (AC) ■ 1400 W (AC) One power supply is mandatory; one more can be added for 1 + 1 redundancy.

# Capability/Feature

### Description

### Storage controller

- Cisco 12G SAS Modular RAID controller card with internal SAS connectivity.
  - Supports up to 24 internal drives (note however that this server can be configured with a maximum of 12 drives)
  - Plugs into a dedicated RAID controller slot

Can be purchased alone, or along with an onboard Flash-Backed Write Cache (FBWC) upgrade option, as shown in the table below

| RAID Card Version              | Supported RAID Levels        | Onboard TMM Cache |  |  |
|--------------------------------|------------------------------|-------------------|--|--|
| UCSC-MRAID12G <sup>1</sup>     | JBOD, 0, 1, 10               | None              |  |  |
| UCSC-MRAID12G-1GB <sup>2</sup> | JBOD, 0, 1, 10, 5, 6, 50, 60 | 1 GB              |  |  |
| UCSC-MRAID12G-2GB <sup>2</sup> | JBOD, 0, 1, 10, 5, 6, 50, 60 | 2 GB              |  |  |
| UCSC-MRAID12G-4GB <sup>2</sup> | JBOD, 0, 1, 10, 5, 6, 50, 60 | 4 GB              |  |  |

### Notes . . .

- 1. Base RAID controller card (RAID 0, 1, 10 only)
- FBWC option for base RAID controller card (adding the FBWC option extends the RAID levels)

All versions of the UCSC-MRAID12G RAID controller support up to 24 internal SAS drives (limited to 12 drives for this server).

- Cisco 12 Gbps Modular SAS HBA with internal SAS connectivity
  - Supports up to 24 internal drives (note however that this server can be configured with a maximum of 12 drives)
  - Plugs into a dedicated PCIe slot at the rear of the server (slot 1 of riser 1)
  - Supports JBOD only, not RAID, as shown in the below table.

| HBA Card Version | Supported RAID Levels |
|------------------|-----------------------|
| UCSC-SAS12GHBA   | JBOD only             |

- Cisco 9300-8E 12G SAS HBA with external SAS connectivity
  - Provides 8 external SAS ports
  - Plugs into a PCIe slot at the rear of the server
  - No FBWC (cache) or cache power backup
  - SAS 3.0 compliant

| Capability/Feature                                                                                                                                        | Description                                                                                                                                                           |  |  |  |  |  |

|                                                                                                                                                           |                                                                                                                                                                       |  |  |  |  |  |
|                                                                                                                                                           | NOTE: The four Intel i350 ports are provided on an optional card that plugs into the mLOM slot, and are separate from the two embedded (on the motherboard) LAN ports |  |  |  |  |  |
| WoL                                                                                                                                                       | The 1-Gb Base-T Ethernet LAN ports support the wake-on-LAN (WoL) standard.                                                                                            |  |  |  |  |  |
| Front Panel                                                                                                                                               | ■ A front panel controller provides status indications and control buttons                                                                                            |  |  |  |  |  |
| ACPI                                                                                                                                                      | This server supports the advanced configuration and power interface (ACPI) 4.0 standard.                                                                              |  |  |  |  |  |
| Fans                                                                                                                                                      | Chassis:                                                                                                                                                              |  |  |  |  |  |
|                                                                                                                                                           | Six hot-swappable fans for front-to-rear cooling                                                                                                                      |  |  |  |  |  |
| Integrated<br>management                                                                                                                                  | Baseboard Management Controller (BMC) running Cisco Integrated Management Controller (CIMC) firmware.                                                                 |  |  |  |  |  |
| processor                                                                                                                                                 | Depending on your CIMC settings, the CIMC can be accessed through the 1-GbE dedicated management port, the 1-GbE LOM ports, or a Cisco virtual interface card (VIC).  |  |  |  |  |  |
| Boot drives  Up to two optional SATA drives can be installed internal to the chass The two SATA boot drives are managed in AHCI mode, using OS-base RAID. |                                                                                                                                                                       |  |  |  |  |  |

# Notes . . .

<sup>1.</sup> NCSI = Network Communications Services Interface protocol. An NCSI slot is powered even when the server is in standby power mode.

# **CONFIGURING the SERVER**

Follow these steps to configure the Cisco UCS C240 M4 High-Density LFF Rack Server:

- STEP 1 VERIFY SERVER SKU, page 13
- STEP 2 SELECT RISER CARDS (OPTIONAL), page 14
- STEP 3 SELECT CPU(s), page 15
- STEP 4 SELECT MEMORY, page 17
- STEP 5 SELECT RAID CONTROLLERS, page 22
- STEP 6 SELECT HARD DISK DRIVES (HDDs), page 27
- STEP 7 SELECT PCIe OPTION CARD(s), page 30
- STEP 8 ORDER OPTIONAL NETWORK CARD ACCESSORIES, page 34
- STEP 9 ORDER GPU CARDS(OPTIONAL), page 38
- STEP 10 ORDER POWER SUPPLY, page 41
- STEP 11 SELECT AC POWER CORD(s), page 42
- STEP 12 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 45
- STEP 13 SELECT NIC MODE (OPTIONAL), page 46
- STEP 14 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL), page 47
- STEP 15 ORDER CISCO FLEXIBLE FLASH SD CARD MODULE (OPTIONAL), page 48
- STEP 16 ORDER OPTIONAL USB 3.0 DRIVE, page 49
- STEP 17 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 50
- STEP 18 SELECT OPERATING SYSTEM MEDIA KIT, page 53
- STEP 19 SELECT SERVICE and SUPPORT LEVEL, page 54
- OPTIONAL STEP ORDER RACK(s), page 59
- OPTIONAL STEP ORDER PDU, page 60

# **STEP 1 VERIFY SERVER SKU**

Select one server product ID (PID) from *Table 2*.

Table 2 PID of the C240 M4 High-Density LFF Rack Base Server

| Product ID (PID) | Description                                                                                                                           |  |  |  |  |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| UCSC-C240-M4L    | UCS C240 M4 LFF, no CPU, memory, HDD, SSD, PCIe cards, tool-less rail kit, or power supply, with 12-drive backplane with SAS expander |  |  |  |  |

# The Cisco UCS C240 M4 server:

■ Does not include power supply, CPU, memory, hard disk drives (HDDs), solid-state drives (SSDs), boot drives, SD cards, riser 1, riser 2, tool-less rail kit, or PCIe cards.

NOTE: Use the steps on the following pages to configure the server with the components that you want to include.

# STEP 2 SELECT RISER CARDS (OPTIONAL)

There are two optional riser cards, riser card 1 and 2. There are three options for riser card 1. Order one riser card 1 from *Table 2* and one riser 2 card from *Table 3*. Riser card 1 is the one on the left when viewed form the back of the server and riser card 2 is on the right.

Table 3 PID of the Riser 1 Card

| Product ID (PID)  | Description                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------|
| UCSC-PCI-1A-240M4 | C240 M4 PCIe Riser 1 Assy (option A)<br>(2 PCIe slots: 1x8 and 1x16 GPU capable)                         |
| UCSC-PCI-1B-240M4 | C240 M4 PCIe Riser 1 Assy (option B)<br>(3 PCIe slots: 3x8)                                              |
| UCSC-PCI-1C-240M4 | C240 M4 PCIe Riser 1 Assy (option C) (2 PCIe slots: 1x8 and 1x16 plus connectors for 2 SATA boot drives) |

The selection of riser card 1 determines the number and type of PCIe cards and SATA boot drives supported in the riser.

Table 4 PID of the Riser 2 Card

| Product ID (PID)  | Description                                                         |
|-------------------|---------------------------------------------------------------------|
| UCSC-PCI-2-C240M4 | Left PCIe Riser Board (Riser 2) for C240 M4 (3 slots: 2x8 and 1x16) |

For additional details, see Riser Card Configuration and Options, page 71.

# STEP 3 SELECT CPU(s)

The standard CPU features are:

- Intel Xeon E5-2600 v3 series processor family CPUs
- Intel C610 series chipset
- Cache size of up to 45 MB

Select CPUs

The available CPUs are listed in *Table 5*.

Table 5 Available Intel CPUs: E5-2600 v3 Series Processor Family CPUs

| Product ID (PID)             | Intel<br>Number | Clock<br>Freq<br>(GHz) | Power<br>(W) | Cache<br>Size<br>(MB) | Cores | QPI      | Highest<br>DDR4 DIMM<br>Clock<br>Support<br>(MHz) <sup>1</sup> |
|------------------------------|-----------------|------------------------|--------------|-----------------------|-------|----------|----------------------------------------------------------------|
| UCS-CPU-E52699D              | E5-2699 v3      | 2.30                   | 145          | 45                    | 18    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52698D              | E5-2698 v3      | 2.30                   | 135          | 40                    | 16    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52697D              | E5-2697 v3      | 2.60                   | 145          | 35                    | 14    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52695D              | E5-2695 v3      | 2.30                   | 120          | 35                    | 14    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52690D              | E5-2690 v3      | 2.60                   | 135          | 30                    | 12    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52683D              | E5-2683 v3      | 2.00                   | 120          | 35                    | 14    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52680D              | E5-2680 v3      | 2.50                   | 120          | 30                    | 12    | 9.6 GT/s | 2133                                                           |
| UCS-CPU-E52670D              | E5-2670 v3      | 2.30                   | 120          | 30                    | 12    | 9.6 GT/s | 2133                                                           |

Notes . .

<sup>1.</sup> If higher or lower speed DIMMs are selected than what is shown in the table for a given CPU, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.

<sup>2.</sup> The E5-2609 v3 CPU does not support Intel Hyper-Threading or Intel Turbo Boost technologies.

# **Approved Configurations**

- (1) 1-CPU configurations:
  - Select any one CPU listed in *Table 5*.
- (2) 2-CPU Configurations:
  - Select two identical CPUs from any one of the rows of *Table 5 on page 15*.

# Caveats

- You can select either one processor or two identical processors.
- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - STEP 4 SELECT MEMORY, page 17 (memory mirroring section)
  - STEP 7 SELECT PCIe OPTION CARD(s), page 30
  - Table 9 on page 25 (RAID support table)
  - ORDER GPU CARDS(OPTIONAL), page 38
- For optimal performance, select DIMMs with the highest clock speed for a given processor (see *Table 5 on page 15*). If you select DIMMs whose speeds are lower or higher than that shown in the tables, suboptimal performance will result.

# **STEP 4 SELECT MEMORY**

The standard memory features are:

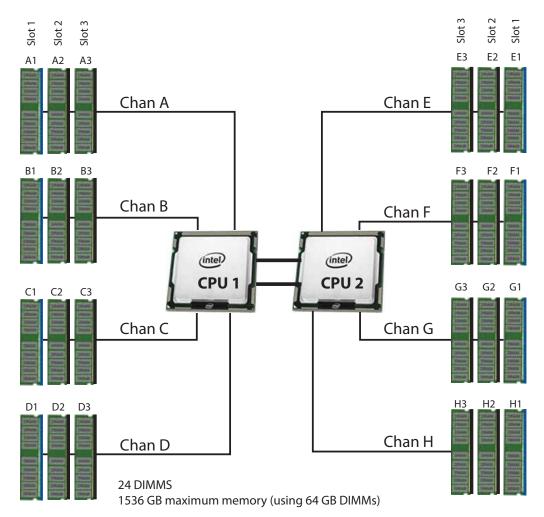

# ■ DIMMs

Clock speed: 2133 MHz
Ranks per DIMM: 1, 2, or 4
Operational voltage: 1.2 V

Registered ECC DDR4 DIMMs (RDIMMs) or load-reduced DIMMs (LRDIMMs)

■ Memory is organized with four memory channels per CPU, with up to three DIMMs per channel, as shown in *Figure 4*.

Figure 4 C240 M4 LFF Memory Organization

4 memory channels per CPU, up to 3 DIMMs per channel

# Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in *Table 6*.

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Table 6 Available DDR4 DIMMs

| Product ID (PID)                 | PID Description                                      | Voltage | Ranks<br>/DIMM |
|----------------------------------|------------------------------------------------------|---------|----------------|
| DIMM Options                     |                                                      |         |                |
| UCS-MR-1X648RU-A <sup>1, 2</sup> | 64GB DDR4-2133-MHz TSV-RDIMM/PC4-17000/octal rank/x4 | 1.2 V   | 8              |
| UCS-MR-1X322RU-A                 | 32GB DDR4-2133-MHz RDIMM/PC4-17000/dual rank/x4      | 1.2 V   | 2              |
| UCS-ML-1X324RU-A                 | 32GB DDR4-2133-MHz LRDIMM/PC4-17000/quad rank/x4     | 1.2 V   | 4              |
| UCS-MR-1X162RU-A                 | 16GB DDR4-2133-MHz RDIMM/PC3-17000/dual rank/x4      | 1.2 V   | 2              |
| UCS-MR-1X081RU-A                 | 8GB DDR4-2133-MHz RDIMM/PC3-17000/single rank/x4     | 1.2 V   | 1              |

# **Memory Mirroring Option**

NO1-MMIRROR Memory mirroring option

# Notes . . .

- 1. Power capping is not supported when using 64GB TSV-RDIMMS.
- 2. NVIDIA GPUs can support only less than 1 TB of total memory in the server. Do not install more than fourteen 64-GB DIMMs when using an NVIDIA GPU card in this server.

# **Approved Configurations**

- (1) 1-CPU configuration without memory mirroring:
  - Select from 1 to 12 DIMMs. Refer to Memory Population Rules, page 65, for more detailed information.

- (2) 1-CPU configuration with memory mirroring:
  - Select 2, 4, 8, or 12 identical DIMMs. The DIMMs will be placed by the factory as shown in the following table.

| Total<br>Number<br>of | ~ -              | CPU 1 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC) |                  |  |  |  |
|-----------------------|------------------|---------------------------------------------------------------------------|------------------|--|--|--|
| DIMMs                 | Blue Slots       | Blue Slots Black Slots White Slots                                        |                  |  |  |  |
| 2                     | (A1, B1)         | -                                                                         | -                |  |  |  |
| 4                     | (A1,B1); (C1,D1) | _                                                                         | -                |  |  |  |
| 8                     | (A1,B1); (C1,D1) | (A2,B2); (C2,D2)                                                          |                  |  |  |  |
| 12                    | (A1,B1); (C1,D1) | (A2,B2); (C2,D2)                                                          | (A3,B3); (C3,D3) |  |  |  |

- Select the memory mirroring option (N01-MMIRROR) as shown in *Table 6 on page 18*.
- (3) 2-CPU configuration without memory mirroring:
  - Select from 1 to 12 DIMMs per CPU. Refer to *Memory Population Rules, page 65*, for more detailed information.
- (4) 2-CPU configuration with memory mirroring:
  - Select 2, 4, 8, or 12 identical DIMMs per CPU. The DIMMs will be placed by the factory as shown in the following table.

| Number<br>of DIMMs<br>per CPU            | CPU 1 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC or identical quad-rank DIMMs for 2DPC)  CPU 2 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC) identical quad-rank DIMMs for 2 |                     |                       |                     | ls for 3DPC or      |                     |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------------|---------------------|---------------------|---------------------|
|                                          | Blue Slots                                                                                                                                                                                                                 | Black Slots         | White Slots           | Blue Slots          | Black Slots         | White Slots         |
| 2                                        | (A1, B1)                                                                                                                                                                                                                   | _                   | _                     | (E1, F1)            | _                   | _                   |
| 4                                        | (A1,B1);<br>(C1,D1)                                                                                                                                                                                                        | _                   | _                     | (E1,F1);<br>(G1,H1) | _                   | -                   |

| 12                                       | (A1,B1);<br>(C1,D1)                                                                                                                                                                                                        | (A2,B2);<br>(C2,D2) | (A3, B3);<br>(C3, D3) | (E1,F1);<br>(G1,H1) | (E2,F2);<br>(G2,H2) | (E3,F3);<br>(G3,H3) |

Notes . . .

<sup>1.</sup> Not recommended (for performance reasons)

■ Select the memory mirroring option (N01-MMIRROR) as shown in *Table 6 on page 18*.

NOTE: System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

### Caveats

System speed is dependent on how many DIMMs are populated per channel. See Table 7 for details.

Table 7 DIMM Memory Speeds with Different CPUs

|                        |      | 1600-MHz Capable CPU |                   | 1866-MHz Capable CPU |                   | 2133-MHz Capable CPU |                                            |

### $Notes \ . \ . \ .$

- 1. 2133-MHz DIMMs are the only offered and supported DIMMs for the C220 M4 server
  - The C240 M4 server supports four different memory reliability, availability, and serviceability (RAS) modes:
    - Independent Channel Mode
    - Mirrored Channel Mode
    - Lockstep Channel Mode
  - Below are the system level RAS Mode combination limitations:
    - Mixing of Independent and Lockstep channel mode is not allowed per platform.
    - Mixing of Non-Mirrored and Mirrored mode is not allowed per platform.
    - Mixing of Lockstep and Mirrored mode is not allowed per platform.
  - Do not mix RDIMMs with LRDIMMs
  - Do not mix 64GB DDR4-2133-MHz TSV-RDIMMs with any other DIMMs
  - Single-rank DIMMs can be mixed with dual-rank DIMMs in the same channel
  - Do not mix quad-rank DIMMs with single- or dual-rank DIMMs in the same channel

- For best performance, observe the following:
  - DIMMs with different timing parameters can be installed on different slots within the same channel, but only timings that support the slowest DIMM will be applied to all.
     As a consequence, faster DIMMs will be operated at timings supported by the slowest DIMM populated.
  - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
  - When single, dual or quad rank DIMMs are populated for 2DPC or 3DPC, always populate the higher number rank DIMM first (starting from the farthest slot). For a 3DPC example, first populate with quad-rank DIMMs in the DIMM slot 1. Then dual-rank DIMMs in the DIMM 2 slot. Then single-rank DIMMs in the DIMM 3slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- When using mirroring, DIMMs must be installed in identical pairs across paired DDR4 buses. That is, mirrored pairs in channels A and B must be identical and pairs in channels C and D must be identical. However, the DIMMs used in channels A and B can be different from those in channels C and D.
- Memory mirroring reduces the amount of available memory by 50% (quantity of DIMMs must be even for mirroring).
- Non-ECC DIMMs are not supported.
- Pairs of DIMMs (A1/B1, A2/B2, etc) MUST be the exact same (same PID, rev, DIMM loading order)
- Cisco memory from previous generation servers (DDR3) is not compatible with this server

For more information regarding memory, see CPUs and DIMMs, page 64.

# STEP 5 SELECT RAID CONTROLLERS

# RAID Controller Option (internal HDD/SSD support)

# Cisco 12G SAS Modular RAID Controller

You can choose the Cisco 12G SAS RAID controller, which plugs into a dedicated RAID controller card slot. This RAID controller supports RAID 0, 1, 10 (without the FBWC option) and supports RAID 0, 1, 10, 5, 6, 50, 60 (with the FBWC option).

NOTE: The number of RAID groups (virtual drives) supported per RAID controller is as follows:

■ Cisco 12G SAS Modular RAID controller = 64

# SAS HBA (internal HDD/SSD/JBOD support)

Instead of a RAID controller, you can choose a SAS HBA for internal drive connectivity (non-RAID):

■ Cisco 12 Gbps Modular SAS HBA, which plugs into a dedicated RAID controller slot.

# SAS HBA (external JBOD support)

In addition to a RAID controller or JBOD SAS HBA for internal drives, you can choose the following SAS HBA for external drive connectivity (non-RAID):

■ Cisco 9300-8e 12G SAS HBA (provides 8 SAS ports for external JBOD connectivity).

# **RAID Volumes and Groups**

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For the Cisco 12G SAS modular RAID controller upgrade:
  - Use all SAS HDDs in each RAID volume

The number of RAID groups (virtual drives) supported per RAID controller is as follows:

■ Cisco 12G SAS Modular RAID controller = 64

# **Select Controller Options**

### Select as follows:

- Cisco 12G SAS modular RAID controller or Cisco 12 Gbps Modular SAS HBA (see *Table 8*), or
- Dual controllers:
  - One Cisco 12G SAS modular RAID controller or Cisco 12 Gbps Modular SAS HBA and
  - One Cisco 9300-8E 12G SAS HBA for external SAS JBOD/enclosure connectivity support (see *Table 8*).

NOTE: The Cisco 12G SAS modular RAID controller can be ordered with or without an optional FBWC. The FBWC option backs up the RAID controller write cache. The FBWC is available in 1 GB, 2 GB, or 4 GB sizes. See *Table 8* for details.

NOTE: For all valid combinations of internal/external RAID controller combinations, see *RAID Details*, page 69.

**Table 8 Hardware Controller Options** 

| Product ID (PID)        | PID Description                                                                                                                         |

|-------------------------|------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| UCSC-MRAID12G-4GB       | 4 GB FBWC, which includes a 4 GB MB memory plus a SuperCap for write cache backup. Supports JBOD, RAID 0, 1, 10, 5, 6, 50, and 60. |  |  |  |  |
| SAS HBA for External JI | SAS HBA for External JBOD Attach                                                                                                   |  |  |  |  |
| Two SFF8644 mini-SAS    | x4 connectors on this card are accessible at the rear of the chassis.                                                              |  |  |  |  |
| UCSC-SAS9300-8E         | Cisco 9300-8e 12G SAS HBA for external JBOD attach                                                                                 |  |  |  |  |
|                         | Supports external JBOD using X8 wide SAS ports.                                                                                    |  |  |  |  |

NOTE: For Cisco 9300-8e 12G SAS HBA external drive enclosure support, see the enclosure section of the compatibility list at the following link:

# http://tinyurl.com/pp83xyk

Customers should contact their storage vendor for technical support related to external JBOD enclosures.

| RAID Configuration Option | ons (not available for Cisco 12 Gbps Modular SAS HBA)                                        |
|---------------------------|----------------------------------------------------------------------------------------------|
| R2XX-SRAID0               | Enable Single Disk Raid 0 Setting                                                            |
|                           |                                                                                              |
| R2XX-RAID0                | Factory preconfigured RAID striping option                                                   |
|                           | Enable RAID 0 Setting. Requires a minimum of one hard drive.                                 |
| R2XX-RAID1                | Factory preconfigured RAID mirroring option                                                  |
|                           | Enable RAID 1 Setting. Requires exactly two drives with the same size, speed, capacity.      |
| R2XX-RAID5                | Factory preconfigured RAID option                                                            |
|                           | Enable RAID 5 Setting. Requires a minimum of three drives of the same size, speed, capacity. |
| R2XX-RAID6                | Factory preconfigured RAID option                                                            |
|                           | Enable RAID 6 Setting. Requires a minimum of four drives of the same size, speed, capacity.  |
|                           |                                                                                              |

NOTE: Although RAID levels 50 and 60 are not orderable from the factory, they are supported for selected controllers as shown in *Table 8 on page 23*.

# **Approved Configurations**

- The Cisco 12G SAS Modular RAID controller option supports up to 12 internal SAS HDDs with up to RAID 0, 1, 10, 5, 6, 50, 60 support (with FBWC option chosen).
- The Cisco 12 Gbps Modular SAS HBA option supports up to 12 internal SAS HDDs with JBOD support.
- The Cisco 9300-8e 12G SAS HBA supports up to 8 external SAS ports with JBOD support.

See *Table 9* for a summary of the supported controller configuration options.

Table 9 Supported Controller Configurations

|        | Only one of the above can be installed at a time |                                                                                    |                                                 |                                |                                                                          |                                 |
| 2      | Card absent                                      | Card absent                                                                        | Installed any slot                              | 0 internal<br>1024<br>external | JBOD                                                                     | None                            |

### Notes . . .

- 1. If you want to boot from a device other than the Cisco 12G SAS Modular RAID controller or Cisco 12 Gbps Modular SAS HBA, you can leave the card installed. Just disable the OPROM for its slot, and the system will boot even with the card installed.
- 2. External drive PCIe controller card is the Cisco 9300-8e 12G SAS HBA and can be installed simultaneously with the Cisco 12G SAS Modular RAID controller or the Cisco 12 Gbps Modular SAS HBA.

### Caveats

- A maximum of one Cisco 9300-8e 12G SAS HBA can be installed, and it can be installed in any slot (depending on the number of CPUs installed). The system can support combinations of Storage Accelerator cards and one Cisco 9300-8e 12G SAS HBA.
- For the Cisco 12G SAS Modular RAID controller, you can choose an optional RAID configuration (up to RAID 0, 1, 10, 5, 6, 50, 60 if optional FBWC option is chosen), which is preconfigured at the factory. The RAID level you choose must be an available RAID choice for the controller selected. RAID levels 50 and 60 are supported, although they are not available

as configuration options. It can also be combined with AHCI support for internal SSDs (SATA Boot Drives).

NOTE: For more important information regarding RAID support, see *RAID Details*, page 69 and *RAID Option ROM (OPROM) Settings*, page 70.

# STEP 6 SELECT HARD DISK DRIVES (HDDs)

The standard disk drive features are:

- 3.5-inch large form factor
- Hot-pluggable
- Sled-mounted

### **Select Drives**

The available HDDs and SSDs are listed in Table 10.

Table 10 Available Hot-Pluggable Sled-Mounted HDDs

| Product ID (PID)               | PID Description                                       | Drive<br>Type | Capacity |
|--------------------------------|-------------------------------------------------------|---------------|----------|
| HDDs                           |                                                       |               |          |
| UCS-HD6T7KL4K <sup>1</sup>     | 6 TB 12G SAS 7.2K RPM LFF HDD (4K sector format)      | SAS           | 6 TB     |
| UCS-HD4T7KS3-E                 | 4 TB SAS 7.2K RPM LFF HDD                             | SAS           | 4 TB     |
| UCS-HDD3TI2F214                | 3 TB SAS 7.2K RPM LFF HDD                             | SAS           | 3 TB     |
| UCS-HDD2TI2F213                | 2 TB SAS 7.2K RPM LFF HDD                             | SAS           | 2 TB     |
| UCS-HDD1TI2F212                | 1 TB SAS 7.2K RPM LFF HDD                             | SAS           | 1 TB     |
| SSDs                           |                                                       |               |          |
| UCS-SD400G0KHY-EP <sup>2</sup> | 400 GB 3.5 inch hybrid enterprise performance 12G SSD | SAS           | 400 GB   |

### Notes . . .

- 1. Operating system support on 4k sector size drives is as follows:
  - Windows: Win2012 and Win2012R2.
  - Linux: RHEL 6.5/6.6/7.0/Sles 11 SP3 and Sles 12.
  - ESXi/Vmware is not supported

EFI mode is available only for boot support- legacy boot mode is not supported. EFI mode is needed only when you boot from 4K format drives.

Ensure that the 4K sector size and 512 byte sector size drives are not configured as part of the same RAID volume.

2. A maximum of two of these SSDs can be installed.

The available boot drives are listed in *Table 11*.

Table 11 Available Boot Drives (mounted inside chassis)

| Product ID (PID)  | PID Description                                     | Drive<br>Type | Capacity |
|-------------------|-----------------------------------------------------|---------------|----------|
| Boot Drives       |                                                     |               |          |
| UCS-SD960G0KSB-EV | 960 GB 2.5 inch Enterprise Value 6G SATA SSD (BOOT) | SATA          | 960 GB   |
| UCS-SD480G0KSB-EV | 480 GB 2.5 inch Enterprise Value 6G SATA SSD (BOOT) | SATA          | 480 GB   |
| UCS-SD120G0KSB-EV | 120 GB 2.5 inch Enterprise Value 6G SATA SSD (BOOT) | SATA          | 120 GB   |

### **Approved Configurations**

# (1) Cisco 12G SAS Modular RAID Controller

- If you selected a Cisco 12G SAS Modular RAID controller you have the following options:
  - Cisco 12G SAS Modular RAID controller with no FBWC option (supports JBOD, RAID 0, 1, 10)
  - Cisco 12G SAS Modular RAID controller with FBWC option (supports JBOD, RAID 0, 1, 10, 5, 6, 50, and 60)
  - For either option, select up to 12 SAS HDDs listed in *Table 10 on page 27*. The Cisco 12G SAS Modular RAID controller does not support SATA HDDs.

# (2) Cisco 12 Gbps Modular SAS HBA

■ If you selected a Cisco 12 Gbps Modular SAS HBA, select up to 12 SAS HDDs.

See SELECT RAID CONTROLLERS, page 22 for more details.

### (3) Systems Using Boot Drives

■ If you are configuring a system that uses SATA SSD boot drives, choose up to two identical boot drives from *Table 11 on page 28*.

NOTE: The two SATA SSD boot drives are managed in AHCI mode, using OS-based software RAID. These two drives, managed with OS software RAID, can coexist with drives managed by a Cisco 12G SAS modular RAID controller or the Cisco 12 Gbps Modular SAS HBA. The drives are plugged directly to the SATA boot drive connectors on riser card 1 (option 3) and mounted inside the chassis. The internal boot drives come mounted to their own unique internal drive sleds, which are different from the front loading hot-swappable drive sleds. See *Riser Card Configuration and Options, page 71*.

# Caveats

- You can choose only SAS HDDs when using the Cisco 12G SAS Modular RAID Controller or Cisco 12 Gbps Modular SAS HBA.
- If you order one or two boot drives, you can order a maximum of one GPU and it must be installed in Riser 2 (UCSC-PCI-2-C240M4) slot 5.
- A maximum of two of the 400 GB 3.5-inch hybrid enterprise performance 12G SSDs can be installed.

# **STEP 7** SELECT PCIe OPTION CARD(s)

The standard PCie card offerings are:

- Modular LAN on Motherboard (mLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)
- Converged Network Adapters (CNAs)
- Host Bus Adapters (HBAs)
- UCS Storage Accelerators

# **Select PCIe Option Cards**

The available PCIe option cards are listed in *Table 12*.

Table 12 Available PCle Option Cards<sup>1</sup>

| Product ID (PID)       | PID Description                                          | Card<br>Height |  |  |  |  |  |
|------------------------|----------------------------------------------------------|----------------|--|--|--|--|--|
| Modular LAN on Moth    | Modular LAN on Motherboard (mLOM) <sup>2</sup>           |                |  |  |  |  |  |
| UCSC-MLOM-C10T-02      | Cisco UCS VIC1227T VIC MLOM - Dual Port 10GBaseT         | N/A            |  |  |  |  |  |
| UCSC-MLOM-CSC-02       | Cisco UCS VIC1227 VIC MLOM - Dual Port 10Gb SFP+         | N/A            |  |  |  |  |  |
| UCSC-MLOM-IRJ45        | Intel i350 quad-port MLOM NIC                            | N/A            |  |  |  |  |  |
| Virtual Interface Card | ds (VICs)                                                |                |  |  |  |  |  |
| UCSC-PCIE-CSC-02       | Cisco VIC 1225 Dual Port 10Gb SFP+ CNA                   | Half           |  |  |  |  |  |
| UCSC-PCIE-C10T-02      | Cisco VIC 1225T Dual Port 10GBaseT CNA                   | Half           |  |  |  |  |  |
| UCSC-PCIE-C40Q-03      | Cisco VIC 1385 Dual Port 40Gb QSFP+ CNA w/RDMA           | Half           |  |  |  |  |  |
| Network Interface Ca   | rds (NICs)                                               |                |  |  |  |  |  |
| 1 Gb NICs              |                                                          |                |  |  |  |  |  |
| N2XX-ABPCI01-M3        | Broadcom 5709 Dual-Port Ethernet PCIe Adapter M3 & later | Half           |  |  |  |  |  |
| UCSC-PCIE-IRJ45        | Intel i350 Quad Port 1Gb Adapter                         | Half           |  |  |  |  |  |
| 10 Gb NICs             |                                                          |                |  |  |  |  |  |
| N2XX-AIPCI01           | Intel X520 Dual Port 10Gb SFP+ Adapter                   | Half           |  |  |  |  |  |
| UCSC-PCIE-ITG          | Intel X540 Dual Port 10GBase-T Adapter                   | Half           |  |  |  |  |  |

Table 12 Available PCle Option Cards<sup>1</sup>

| Product ID (PID)     | PID Description                                               | Card<br>Height |

| UCSC-F-FIO-6400SS    | UCS 6200GB Fusion ioMemory3 SX Scale line for C-Series        | Full           |

### Notes . . .

- 1. The GPU cards (see *ORDER GPU CARDS(OPTIONAL)*, page 38) must be inserted into a full length x16 (electrical) PCIe slot. See *Riser Card Configuration and Options*, page 71 for more details. The rest of the PCIe cards are x8 (electrical) and can be plugged into any PCIe slot of riser 1 or riser 2.
- 2. The mLOM cards do not plug into any of the riser 1 or riser 2 card slots; instead, they plug into a connector inside the server chassis.
- 3. A maximum of six storage accelerator cards are supported and some are riser dependent. 1.3 TB, 2.6 TB, or 3.2 TB cards should not be installed in to slots 5 or 6 so the total number of those capacity points is four. The Cisco 9300-8e 12G SAS HBA also can only be installed in riser 1; therefore if you install a Cisco 9300-8e 12G SAS HBA, it may displace one of the storage accelerator cards.

# Caveats

- If you choose an external drives controller (Cisco 9300-8e 12G SAS HBA), it will consume one PCIe slot.
- A maximum of six storage accelerator cards are supported and some are riser dependent.
   1.3 TB, 2.6 TB, or 3.2 TB cards should not be installed in to slots 5 or 6 so the total number of those capacity points is four.
- For 1-CPU systems:
  - Only the PCIe slots on PCIe riser 1 are available for 1-CPU system.
  - The PCIe slots on riser 2 are not supported on 1-CPU systems. The slots are full-height PCIe slots 4, 5, and 6 (see *Figure 3 on page 7*). These are the slots on the right when looking at the rear of the server.

Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slot 2 of riser 1. You can also order an mLOM VIC card to be installed in the mLOM slot internal to the chassis and thus have two VIC cards in operation at the same time. See *Table 12 on page 30* for the selection of plug-in and mLOM VIC cards. See also *Table 1 on page 8* and *Riser Card Configuration and Options*, page 71 for the PCIe slot physical descriptions.

# ■ For 2-CPU systems:

- Depending on the riser 1 option chosen, up to six PCIe slots are available, three on PCIe riser 1 (PCIe slots 1, 2, and 3) and three on PCIe riser 2 (PCIe slots 4, 5, and 6).
- All of the slots are full-height.
- Two plug-in PCIe VIC cards can be installed in 2-CPU systems, using slots 2 and 5. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot inside the chassis and thus have three VIC cards in operation at the same time. See Table 12 on page 30 for the selection of plug-in and mLOM VIC cards. See also Table 1 on page 8 and Riser Card Configuration and Options, page 71 for the PCIe slot physical descriptions.
- If GPUs are installed in slots 2 (Riser 1 option A) and 5 (Riser 2), the NCSI capability automatically switches over to slots 1 (Riser 1 option A) and 4 (Riser 2). Therefore, Cisco PCIe VICs can be installed in slots 1 and 4 if GPUs are installed in slots 2 and 5.

NOTE: UCSM managed servers are discoverable only if a VIC 1225 is installed in slot 2 or a VIC 1227/1227T is installed in the MLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC 1227/1227T in the MLOM slot.

- Other considerations for the Cisco VIC 1225/1225T/1227T/1385 cards:
  - VIC 1225 and VIC 1227/1227T support 10G SFP+ optical and copper twinax connections
  - VIC 1225T Supports RJ45 Category 6 or better twisted pair cable connections
  - VIC 1385 supports a 4x10 Gbps QSFP to SFP breakout fiber cable.
  - The 2-CPU version of the server supports installation of two PCIe Cisco VIC 1225/1225T/1385 cards and they are supported in PCIe slots 2 and 5. Slot 2 is the primary slot for UCSM integration and slots 2 and 5 are the primary slots for Cisco NIC card mode.
  - The server supports up to two PCIe Cisco VICs (1225, 1225T, 1385) plus an MLOM VIC (1227, 1227T), however, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 2, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.
  - Installation of the Cisco UCS VIC1225 requires that the server have CIMC firmware version 1.4(6) or later installed and VIC firmware of 2.1(0) or later. Installation of the Cisco UCS VIC1225T requires that the server have CIMC firmware version 1.5(1) or later installed and VIC firmware of 2.1(1) or later.

- The server supports installation of up to two plug-in Cisco VIC 1225/1225T/1385 cards and they are supported only in certain slots. A third simultaneously operating VIC can be the mLOM VIC 1227/1227T card, which is installed in a slot inside the chassis. See *Table 13 on page 33* for details.
- The VIC features mentioned in this section are supported with the following software releases: 2.0.6 (CIMC) and 2.2.5a (UCSM).

Table 13 Cisco UCS 240 M4 Requirements for Plug-in Virtual Interface Cards

| VIC PID                                                | Number of<br>Plug-in<br>VICs<br>Supported<br>in Server | Slots That<br>Support VICs <sup>1</sup> | Primary Slot For<br>UCS Integration<br>or Cisco Card<br>NIC Mode | Minimum<br>Cisco IMC<br>Firmware | Minimum<br>VIC<br>Firmware |
|--------------------------------------------------------|--------------------------------------------------------|-----------------------------------------|------------------------------------------------------------------|----------------------------------|----------------------------|
| Cisco UCS VIC1225<br>(UCSC-PCIE-CSC-02)                | 2                                                      | PCle 2<br>PCle 1                        | Riser 1: PCIe 2<br>Riser 2: PCIe 5                               | 1.4(6)                           | 2.1(0)                     |
| Cisco UCS VIC1225T<br>(UCSC-PCIE-C10T-02)              | 2                                                      | PCIe 5<br>PCIe 4                        | See footnote                                                     | 1.5(1)                           | 2.1(1)                     |
| Cisco UCS VIC 1385 <sup>3</sup><br>(UCSC-PCIE-C40Q-03) | 2                                                      | See footnote <sup>2</sup>               |                                                                  | 2.0(2)                           | 2.2(16)                    |

### Notes . . .

- 1. For riser PID UCSC-PCI-1B-240M4 (riser 1 option B) only: Slot 2 is the only slot that supports a VIC.
- 2. For riser PIDs UCSC-PCI-1A-240M4 (riser 1 option A) only: When a GPU card is present in slot 2 of riser 1 option A, NCSI support automatically shifts to slot 1, which becomes the primary slot for a VIC. When a GPU card is present in riser 2 slot 5, NCSI support automatically shifts to slot 4, which becomes the primary slot for a VIC. UCSM managed servers are discoverable only if a VIC 1225 is installed in slot 2 or a VIC 1227/1227T is installed in the MLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC 1227/1227T in the MLOM slot.
- 3. If the Cisco UCS VIC 1385 is installed with another VIC, the VIC 1385 should be installed in the primary VIC slot (an x16 slot, such as riser 1 option A slot 2 or riser 2 slot 5). If riser1 option B is installed, slot 2 is an x8 slot, in which case the VIC 1385 should be installed in slot 5.
  - The quantity and type of PCIe cards that can be installed depends in the riser card options. See *Riser Card Configuration and Options*, page 71 for additional details.
  - To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C240 M4 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL:

http://www.cisco.com/en/US/products/ps10477/prod\_technical\_reference\_list.html

# STEP 8 ORDER OPTIONAL NETWORK CARD ACCESSORIES

Copper twinax cables and SFP optical modules may be ordered to support the two-port network cards that are available with the server.

# **Choose Optional Twinax Cables**

*Table 14* lists the copper twinax cables available for the PCIe cards. You can choose cable lengths of 1, 3, 5, 7, or 10 meters. The two longer cables (7 and 10 meters) are active, which means that they contain active components within the SFP+ housing to improve signal quality.

Table 14 Available Twinax Cables

| Product ID (PID) | PID Description              |
|------------------|------------------------------|
| SFP-H10GB-CU1M   | 10GBASE-CU SFP+ Cable (1 M)  |
| SFP-H10GB-CU3M   | 10GBASE-CU SFP+ Cable (3 M)  |
| SFP-H10GB-CU5M   | 10GBASE-CU SFP+ Cable (5 M)  |
| SFP-H10GB-ACU7M  | 10GBASE-CU SFP+ Cable (7 M)  |
| SFP-H10GB-ACU10M | 10GBASE-CU SFP+ Cable (10 M) |

# **Approved Configurations**

- (1) Choose Up to Two Twinax Cables for Each Network Card Ordered
  - You may choose one or two twinax cables for each compatible PCIe network card ordered. The cables can be different lengths; however, you would normally order two cables of equal lengths to connect to the primary and redundant network switching equipment.

# **Choose Optional SFP Modules**

Optical Cisco SFP+ modules are listed in *Table 15*.

Table 15 Available SFP Modules

| Product ID (PID) | PID Description                                                                                      |
|------------------|------------------------------------------------------------------------------------------------------|
| SFP-10G-SR       | 10GBASE-SR SFP+ Module<br>850 nm, multimode, SR, 3.3V, LC connector, with Digital Optical Monitoring |
| DS-SFP-FC8G-SW   | 8 Gbit SFP+ Module<br>850 nm, multimode, SR, 3.3V, LC connector, with Digital Optical Monitoring     |

# **Approved Configurations**

- (1) Choose Up to Two SFP+ Modules for Each Network Card Ordered
  - You may choose one or two SFP+ optical modules cables for each compatible PCIe network card ordered. You would normally order two modules for connecting to the primary and redundant network switching equipment. With the SFP+ optical modules, you can use common fiber optic cables, widely available.

See the Figure 5 on page 37 for typical SFP+ and twinax connections to the network cards.

### Caveats

Check the table on the following page for compatibility between the PCIe network cards and SFPs or twinax cables.

NOTE: The table shows all PCIe network cards for all C-series servers. Not all of the cards shown in the table are supported in this server. The intent of the table is to show compatibility between cards and twinax cables or SFPs.

Table 16 PCIe Card Compatibility

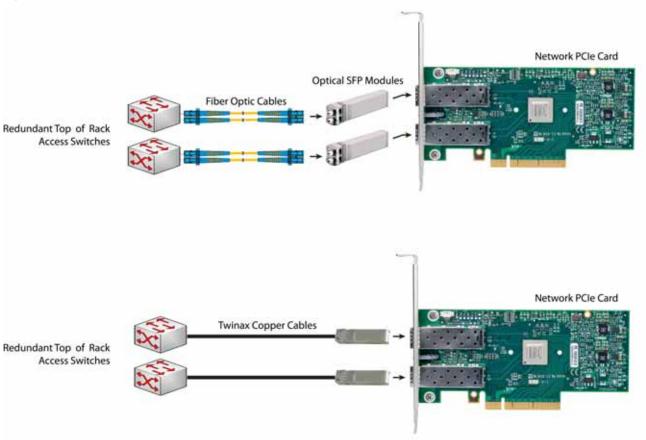

| DCIo Cordo                                                                               | Twinax                  | Cisco SFP Modules                |                   |  |  |  |

| UCSC-PCIE-E16002<br>(Emulex LPe16002-M6, 16Gb Fibre Channel HBA with SR Optics) | No               | Preinstalled - | do not change SFP |

### Notes . . .

Figure 5 Network Card Connections

<sup>1.</sup> This card supports a 4x10 Gbps QSFP to SFP breakout fiber cable.

## STEP 9 ORDER GPU CARDS(OPTIONAL)

### **Select GPU Options**

The available GPU PCIe options are listed in *Table 17*.

Table 17 Available PCle Option Cards

| Product ID (PID) | PID Description  | Card Size                |
|------------------|------------------|--------------------------|
| GPU PCIe Cards   |                  |                          |
| UCSC-GPU-K10     | NVIDIA K10       | Full-height, double wide |
| UCSC-GPU-K20     | NVIDIA K20       | Full-height, double wide |
| UCSC-GPU-K20X    | NVIDIA K20X      | Full-height, double wide |
| UCSC-GPU-VGXK1   | NVIDIA GRID K1   | Full-height, double wide |
| UCSC-GPU-VGXK2   | NVIDIA GRID K2   | Full-height, double wide |
| UCSC-GPU-K40     | NVIDIA Tesla K40 | Full-height, double wide |
| UCSC-GPU-K80     | NVIDIA K80       | Full-height, double wide |

CAUTION: When using GPU cards, the operating temperature range is  $32^{\circ}$  to  $95^{\circ}F$  ( $0^{\circ}$  to  $35^{\circ}C$ ).

NOTE: All GPU cards require two CPUs and a minimum of two power supplies in the server. 1400 W power supplies are recommended. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

### **Select GPU Power Cables**

Whenever you select a K1/K2/K10/K20/K20X/K40 GPU for this server, you must also select one power cable for each GPU selected. The available GPU power cables are listed in *Table 18*.

Table 18 Available GPU Power Cables

| Product ID (PID)  | PID Description         |
|-------------------|-------------------------|
| UCSC-GPUCBL-240M4 | C240 M4 GPU Power Cable |

Whenever you select a K80 GPU for this server, you must also select one power cable kit for each GPU selected. The available GPU power cables are listed in *Table 19*.

Table 19 Available GPU Power Cables (K80 only)

| Product ID (PID)  | PID Description                                   |
|-------------------|---------------------------------------------------|
| UCS-300WKIT-240M4 | 300 Watt Cable and Kit for UCS C240M4 Rack Server |

#### Caveats

- NVIDIA GPUs can support only less than 1 TB of total memory in the server. Do not install more than fourteen 64-GB DIMMs when using an NVIDIA GPU card in this server.
- NVIDIA GRID K1 and K2 GPUs can be mixed. No other GPU mixing is allowed.
- If you order a K80 GPU, note the following:
  - You cannot mix the K80 with any other GPU
  - You must select 2 CPUs for the server
  - You must select two 1400 W power supplies (see ORDER GPU CARDS(OPTIONAL), page 38)
- Slot 5 on riser card 2 is the required slot for the first GPU.
- Slot 2 on riser card 1 is the secondary slot for a second GPU. The riser card 1 options that are compatible with GPUs are:
  - Riser card 1 option A (UCSC-PCI-1A-240M4)

NOTE: UCSM managed servers are discoverable only if a VIC 1225 is installed in slot 2 or a VIC 1227/1227T is installed in the MLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC 1227/1227T in the MLOM slot.

NOTE: For more information on the riser 1 card options, see *Riser Card Configuration and Options, page 71*.

■ If you order one or two boot drives, you can order a maximum of one GPU and it must be installed in Riser 2 (UCSC-PCI-2-C240M4) slot 5.

NOTE: See *Figure 6 on page 61* for the location of the 8-pin GPU power connector on the motherboard. Connect cable(s) as appropriate from this connector to the power connector on the GPU(s).

NOTE: See *Figure 6 on page 61* for the location of the 8-pin GPU power connector on the motherboard. Connect cable(s) as appropriate from this connector to the power connector on the GPU(s).

### **STEP 10 ORDER POWER SUPPLY**

The C240 M4 server requires at least one power supply. A lightly loaded server may require one or two 650 W power supplies. A fully loaded server might need to be powered with two larger capacity power supplies. A server with one GPU requires at least two power supplies (1400 W power supplies are recommended). A server with two GPUs also requires at least two power supplies (1400 W power supplies are recommended). Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

Table 20 Power Supply

| Product ID (PID)               | PID Description                                             |
|--------------------------------|-------------------------------------------------------------|
| UCSC-PSU2-1400W                | 1400W AC Power Supply (200 - 240V) 2U & 4U C Series Servers |
| UCSC-PSU2V2-1200W <sup>1</sup> | 1200W / 800W V2 AC Power Supply for 2U C-Series Servers     |
| UCSC-PSU-930WDC                | 930 W -48V DC Common Slot Power Supply for C-series servers |
| UCSC-PSU2V2-650W               | 650W V2 AC Power Supply for C-Series Servers                |

#### Notes . . .

NOTE: In a two power supply server, both power supplies must be identical.

<sup>1.</sup> The power output is 1200W with a 200-240V input and 800W with a 100-120V input.

## **STEP 11 SELECT AC POWER CORD(s)**

Using *Table 21*, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

Table 21 Available Power Cords

| Product ID (PID) | PID Description                                               | Images                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

# STEP 12 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

Select a Tool-Less Rail Kit

Select a tool-less rail kit from Table 22.

Table 22 Tool-Less Rail Kit Options

| Product ID (PID) | PID Description                                            |
|------------------|------------------------------------------------------------|
| UCSC-RAILB-M4    | Ball Bearing Rail Kit for C220 M4 and C240 M4 Rack Servers |

Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use *Table 23* to order a cable management arm.

Table 23 Cable Management Arm

| Product ID (PID) | PID Description                                            |
|------------------|------------------------------------------------------------|
| UCSC-CMA-M4      | Reversible CMA for C240 M4 tool-less ball bearing rail kit |

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C240 M4 Installation and Service Guide* at this URL:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

**NOTE**: If you plan to rackmount your UCS C240 M4 server, you must order a tool-less rail kit.

## **STEP 13 SELECT NIC MODE (OPTIONAL)**

By default, the C240 M4 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in *Table 24*. In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See *Chassis Rear View, page 7* for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in *Table 24*. In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/sw/gui/config/guide/2-0/b\_Cisco\_UCS\_C-series\_GUI\_Configuration\_Guide\_201.pdf

Table 24 Dedicated NIC Mode Ordering Information

| Product ID (PID) | PID Description                                   |
|------------------|---------------------------------------------------|
| UCSC-DLOM-01     | Dedicated Mode BIOS setting for C-Series Servers  |
| UCSC-CCARD-01    | Cisco Card Mode BIOS setting for C-Series Servers |

## **STEP 14 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL)**

Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

The TPM ordering information is listed in *Table 25*.

Table 25 Trusted Platform Module

| Product ID (PID) | PID Description                                       |
|------------------|-------------------------------------------------------|
| UCSX-TPM1-001    | Trusted Platform Module 1.2 SPI-based for UCS Servers |

NOTE: The module used in this server conforms to TPM v1.2/1.3, as defined by the Trusted Computing Group (TCG). It is also SPI-based.

## STEP 15 ORDER CISCO FLEXIBLE FLASH SD CARD MODULE (OPTIONAL)

Order 64 GB SD cards or 32 GB SD cards. See *Figure 6 on page 61* for the location of the SD cards. There are two locations, SD1 and SD2.

Table 26 64 GB Secure Digital (SD) Card (blank)

| Product ID (PID) | PID Description               |
|------------------|-------------------------------|
| UCS-SD-64G-S     | 64 GB SD Card for UCS Servers |

Table 27 32 GB Secure Digital (SD) Card (blank)

| Product ID (PID) | PID Description               |
|------------------|-------------------------------|
| UCS-SD-32G-S     | 32 GB SD Card for UCS Servers |

### Caveats

- Install either one or two 64 GB SD cards or one or two 32 GB SD cards
- Do not mix SD card sizes

## **STEP 16 ORDER OPTIONAL USB 3.0 DRIVE**

You can order one optional USB 3.0 drive. The USB drive ordering information is listed in *Table 28*.

Table 28 USB 3.0 Drive

| Product ID (PID)  | PID Description                   |
|-------------------|-----------------------------------|
| UCS-USBFLSHB-16GB | UCS Servers 16 GB Flash USB Drive |

See Figure 6 on page 61 for the location of the USB connector

## STEP 17 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

Several operating systems and value-added software programs are available. Select as desired from *Table 29*.

Table 29 OSs and Value-Added Software (for 2-CPU servers)

| PID Description      | Product ID (PID)                                             |  |  |  |  |
|----------------------|--------------------------------------------------------------|--|--|--|--|
| Cisco One            |                                                              |  |  |  |  |

| MSWS-12R2-DC2S-RM | Windows Server 2012 R2 Datacen(2 CPU/Unlimited VM) Rec Media |  |  |  |

### STEP 19 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

### Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

#### **SMARTnet for UCS**

For support of the entire Unified Computing System, Cisco offers the Cisco SMARTnet for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For UCS blade servers, there is Smart Call Home, which provides proactive, embedded diagnostics and real-time alerts. For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco SMARTnet for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. You can choose a desired service listed in *Table 31*.

Table 31 Cisco SMARTnet for UCS Service

| Product ID (PID)  | On Site? | Description                               |
|-------------------|----------|-------------------------------------------|
| CON-PREM-C240M4LF | Yes      | ONSITE 24X7X2 UCS C240 M4 Server - LFF    |
| CON-OSP-C240M4LF  | Yes      | ONSITE 24X7X4 UCS C240 M4 Server - LFF    |
| CON-OSE-C240M4LF  | Yes      | ONSITE 8X5X4 UCS C240 M4 Server - LFF     |
| CON-OS-C240M4LF   | Yes      | ONSITE 8X5XNBD UCS C240 M4 Server - LFF   |
| CON-S2P-C240M4LF  | No       | SMARTNET 24X7X2 UCS C240 M4 Server - LFF  |
| CON-SNTP-C240M4LF | No       | SMARTNET 24X7X4 UCS C240 M4 Server - LFF  |
| CON-SNTE-C240M4LF | No       | SMARTNET 8X5X4 UCS C240 M4 Server - LFF   |
| CON-SNT-C240M4LF  | No       | SMARTNET 8X5XNBD UCS C240 M4 Server - LFF |

### **SMARTnet for UCS Hardware Only Service**

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco SMARTnet for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. SMARTnet for UCS Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required. You can choose a service listed in *Table 32*.

Table 32 SMARTnet for UCS Hardware Only Service

| Product ID (PID)  | Service<br>Level GSP | On<br>Site? | Description                                |
|-------------------|----------------------|-------------|--------------------------------------------|

| CON-UCW5-C240M4LF | UCW5                 | Yes         | UC PLUS 8X5XNBDOS UCS C240 M4 Server - LFF |

### **Unified Computing Partner Support Service**

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

Partner Unified Computing Support Options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners, but requires additional specializations and requirements. For additional information, see the following URL:

### www.cisco.com/go/partnerucssupport

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

Partner Support Service for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

See Table 33.

Table 33 Partner Support Service for UCS

| Product ID (PID)  | Service<br>Level<br>GSP | On<br>Site? | Description                                   |
|-------------------|-------------------------|-------------|-----------------------------------------------|
| CON-PSJ1-C240M4LF | PSJ1                    | No          | UCS SUPP PSS 8X5XNBD UCS C240 M4 Server - LFF |
| CON-PSJ2-C240M4LF | PSJ2                    | No          | UCS SUPP PSS 8X5X4 UCS C240 M4 Server - LFF   |

### **Unified Computing Combined Support Service**

Combined Services makes it easier to purchase and manage required services under one contract. SMARTnet services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations

You can choose a service listed in Table 35.

Table 35 UCS Computing Combined Support Service

### **Unified Computing Drive Retention Service**

With the Cisco Unified Computing Drive Retention (UCDR) Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive. In exchange for a Cisco replacement drive, you provide a signed Certificate of Destruction (CoD) confirming that the drive has been removed from the system listed, is no longer in service, and has been destroyed.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The UCDR service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in *Table 36*.

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

**Table 36 Drive Retention Service Options** 

| Service Description             | Service<br>Program Name | Service<br>Level GSP | Service Level  | Product ID (PID)   |
|---------------------------------|-------------------------|----------------------|----------------|--------------------|
| SMARTnet for UCS                | LICE DD                 | UCSD7                | 24x7x4 Onsite  | CON-UCSD7-C240M4LF |
| Service with Drive<br>Retention | UCS DR                  | UCSD5                | 8x5xNBD Onsite | CON-UCSD5-C240M4LF |
| SMARTnet for UCS                | LICS HW. DD             | UCWD7                | 24x7x4 Onsite  | CON-UCWD7-C240M4LF |

http://www.cisco.com/en/US/products/ps10312/serv\_group\_home.html

## OPTIONAL STEP - ORDER RACK(s)

The optional R42610 rack is available from Cisco for the C-Series servers, including the C240 M4 LFF server. This rack is a standard 19-inch rack and can be ordered with a variety of options, as listed in *Table 37*. Racks are shipped separately from the C240 M4 LFF server.

Table 37 Racks and Rack Options

| Product ID (PID)       | PID Description                               |
|------------------------|-----------------------------------------------|
| RACK-UCS <sup>1</sup>  | Cisco R42610 expansion rack, no side panels   |
| RACK-UCS2 <sup>1</sup> | Cisco R42610 standard rack, w/side panels     |
| RACK-BLANK-001         | Filler panels (qty 12), 1U, plastic, toolless |
| RACK-CBLMGT-001        | Cable mgt D rings (qty 10), metal             |
| RACK-CBLMGT-011        | Cable mgt straps (qty 10), Velcro             |
| RACK-FASTEN-001        | Mounting screws (qty 100), M6                 |
| RACK-FASTEN-002        | Cage nuts (qty 50), M6                        |
| RACK-JOIN-001          | Rack joining kit                              |

Notes . . .

For more information about the R42610 rack, see RACKS, page 77.

<sup>1.</sup> Use these same base PIDs to order spare racks (available only as next-day replacements).

## **OPTIONAL STEP - ORDER PDU**

An optional power distribution unit (PDU) is available from Cisco for the C-Series rack servers, including the C240 M4 server. This PDU is available in a zero rack unit (RU) style (see *Table 37*).

Table 38 PDU Options

| Product ID (PID) | PID Description |
|------------------|-----------------|
| RP208-30-2P-U-2  | Zero RU PDU     |

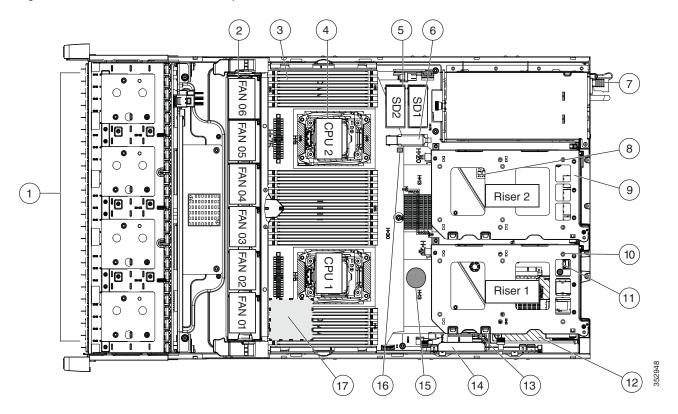

For more information about the PDU, see PDUs, page 79.

## SUPPLEMENTAL MATERIAL

## **CHASSIS**

An internal view of the C240 M4 chassis with the top cover removed is shown in Figure 6.

## **Block Diagram**

A simplified block diagram of the C240 M4 server is shown in Figure 7.

Figure 7 C240 M4 SFF Block Diagram (simplified)

### **CPUs and DIMMs**

### **Physical Layout**

Each CPU has four DIMM channels:

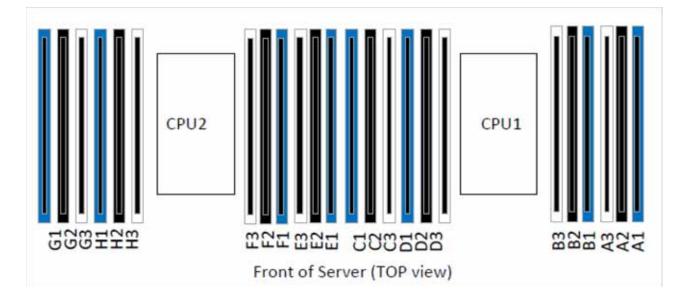

- CPU1 has channels A, B, C, and D
- CPU2 has channels E, F, G, and H

Each DIMM channel has three slots: slot 1, slot 2, and slot 3. The blue-colored DIMM slots are for slot 1, the black-colored slots for slot 2, and the white slots for slot 3.

As an example, DIMM slots A1, B1, C1, and D1 belong to slot 1, while A2, B2, C2, and D2 belong to slot 2.

Figure 8 shows how slots and channels are physically laid out on the motherboard. The DIMM slots on the right half of the motherboard (channels A, B, C, and D) are associated with CPU 1, while the DIMM slots on the left half of the motherboard (channels E, F, G, and H) are associated with CPU 2. The slot 1 (blue) DIMM slots are always located farther away from a CPU than the corresponding slot 2 (black) and slot 3 (white) slots. Slot 1 slots (blue) are populated before slot 2 slots (black) and slot 3 (white) slots.

Figure 8 Physical Layout of CPU DIMM Channels and Slots

64

### **Memory Population Rules**

When considering the memory configuration of your server, consider the following items:

- Each channel has three DIMM slots (for example, channel A = slots A1, A2, and A3).
  - A channel can operate with one, two, or three DIMMs installed.
  - If a channel has only one DIMM, populate slot 1 first (the blue slot).
- When both CPUs are installed, populate the DIMM slots of each CPU identically.
  - Fill blue slots in the channels first: A1, E1, B1, F1, C1, G1, D1, H1
  - Fill black slots in the channels second: A2, E2, B2, F2, C2, G2, D2, H2
  - Fill white slots in the channels third: A3, E3, B3, F3, C3, G3, D3, H3
- Any DIMM installed in a DIMM socket for which the CPU is absent is not recognized.
- Observe the DIMM mixing rules shown in *Table 39*

Table 39 DIMM Rules for C220 M4 Servers

| DIMM Parameter          | DIMMs in the Same Channel                                                                              | DIMM in the Same Slot <sup>1</sup>                                     |  |  |  |
|-------------------------|--------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|--|--|--|
| DIMM Capacity           |                                                                                                        |                                                                        |  |  |  |
| RDIMM = 8, 16, or 64 GB | DIMMs in the same channel (for                                                                         | For best performance, DIMMs in the                                     |  |  |  |
| LRDIMM = 32 GB          | example, A1, A2, and A3) can have different capacities.                                                | same slot (for example, A1, B1, C1, D1) should have the same capacity. |  |  |  |
|                         | Do not mix LRDIMMs with RDIMMs                                                                         | Do not mix LRDIMMs with RDIMMs                                         |  |  |  |
| DIMM Speed              |                                                                                                        |                                                                        |  |  |  |
| 2133-MHz <sup>2</sup>   | DIMMs will run at the lowest speed of the DIMMs/CPUs installed                                         | DIMMs will run at the lowest speed of the DIMMs/CPUs installed         |  |  |  |
| DIMM Type               |                                                                                                        |                                                                        |  |  |  |
| RDIMMs or LRDIMMs       | Do not mix DIMM types in a channel                                                                     | Do not mix DIMM types in a slot                                        |  |  |  |
| D (D. C.)               | 1 DPC, 2 DPC, or 3 DPC                                                                                 |                                                                        |  |  |  |
| DIMMs per Channel (DPC) | See <i>Table 7 on page 20</i> for valid LRDIMM and RDIMM 1 DPC, 2 DPC, and 3 DPC memory configurations |                                                                        |  |  |  |

#### Notes . . .

- 1. Although different DIMM capacities can exist in the same slot, this will result in less than optimal performance. For optimal performance, all DIMMs in the same slot should be identical.
- 2. Only 2133-MHz DIMMs are currently available for the C240 M4 server.

## **DIMM Population Order**

Populate the DIMMs for a CPU according to *Table 40*.

Table 40 DIMM Population Order per CPU

| DIMMs<br>per CPU | Populate<br>CPU 1 Slots                             | Populate<br>CPU 2 Slots                             |
|------------------|-----------------------------------------------------|-----------------------------------------------------|
| 1                | A1                                                  | E1                                                  |
| 2                | A1, B1                                              | E1, F1                                              |
| 3                | A1, B1, C1                                          | E1, F1, G1                                          |
| 4                | A1, B1, C1, D1                                      | E1, F1, G1, H1                                      |
| 6 <sup>1</sup>   | A1, B1, C1, D1<br>A2, B2                            | E1, F1, G1, H1<br>E2, F2                            |
| 8                | A1, B1, C1, D1,<br>A2, B2, C2, D2                   | E1, F1, G1, H1,<br>E2, F2, G2, H2                   |
| 12               | A1, B1, C1, D1,<br>A2, B2, C2, D2<br>A3, B3, C3, D3 | E1, F1, G1, H1,<br>E2, F2, G2, H2<br>E3, F3, G3, H3 |

Notes . . .

<sup>1.</sup> Not recommended (for performance reasons)

## **Recommended Memory Configuration**

This section explains the recommended DIMM population order rules for the C240 M4 server.

- All DIMMs must be DDR4 DIMMs.
- Do not mix:
  - DIMMs with different clock rates in a channel
  - RDIMMs and LRDIMMs
- There are blue, black, and white DIMM slots. Populate blue slots first.
- When DIMMs ranks are mixed in the same channel, always populate the highest rank DIMM in the blue DIMM slot and lower rank DIMM(s) in the black and white DIMM slots.

Many memory configurations are possible. For best results, follow *Table 41* when populating 2133-MHz DIMMs for Intel Xeon E5-2600 v3 CPUs.

Table 41 Recommended Memory Configurations for Intel Xeon E5-2600 v3 CPUs (with 2133-MHz DIMMs)<sup>1</sup>

| Total                    |                                           | CPU 1 DIMMs                                |                                            |                                           | CPU 2 DIMM                                 |                                            |                            |                |

#### Notes . .

- 1. Rows marked in yellow indicate best performance.
- 2. Unbalanced configuration (memory not populated equally across the four memory channels). These configurations are possible but not recommended due to poor performance.

## **Additional DIMM Populations**

The list in *Table 42* is not a complete list of all supported DIMM populations, but highlights common configuration options.

**Table 42 Supported DIMM Configurations** 

| CPU 1 DIMMs | Total DIMMs<br>for CPU 1 | CPU 1<br>Capacity | CPU 2 DIMMs | Total DIMMs<br>for CPU 2 | CPU 2<br>Capacity | Total<br>Capacity for<br>2 CPUs |
|-------------|--------------------------|-------------------|-------------|--------------------------|-------------------|---------------------------------|
| 1 x 8 GB    | 1                        | 8 GB              | 1 x 8 GB    | 1                        | 8 GB              | 16 GB                           |

### **RAID Details**

The available RAID configurations are shown in this section.

NOTE: You can select either a Cisco 12G Modular RAID controller or a Cisco 12 Gbps Modular SAS HBA, but not both at the same time.

## Cisco 12G SAS Modular RAID Controller (RAID Support)

- Select one of the following:
  - Cisco 12G SAS Modular RAID controller from Table 8 on page 23, or
  - Cisco 9300-8E 12G SAS HBA from Table 8 on page 23, or
  - One Cisco 12G SAS Modular RAID controller and one Cisco 9300-8E 12G SAS HBA from Table 8 on page 23.

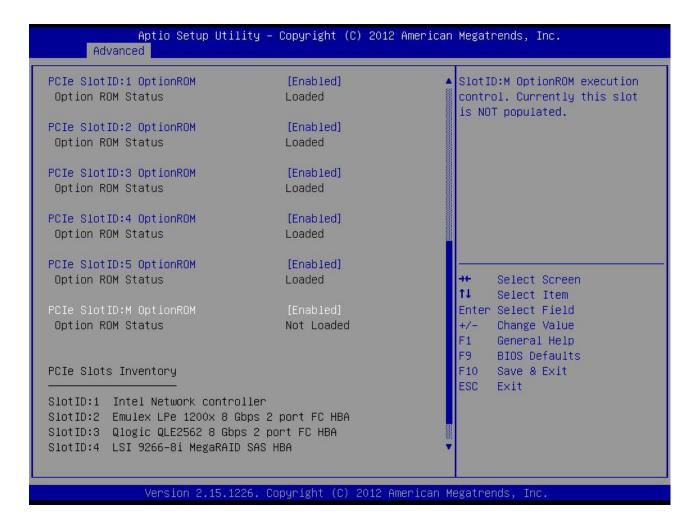

### Cisco 12 Gbps SAS HBA (JBOD Only Support)

- Select one of the following:
  - Cisco 12 Gbps Modular SAS HBA from Table 8 on page 23, or
  - Cisco 9300-8E 12G SAS HBA from Table 8 on page 23, or

## **RAID Option ROM (OPROM) Settings**

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in *Figure 9*.

Figure 9 Example BIOS Screen for OPROM

## **Riser Card Configuration and Options**

The three riser card 1 options are shown in *Table 43*. The number of PCIe card slots and connectors for SATA boot drives depends on which option is selected for riser 1. The riser card 2 slot assignments are fixed and are shown in *Table 44 on page 72*.

Table 43 Riser Card 1 Slot Options

| Slot #  | Height    | Length            | Electrical | Mechanical            | NCSI             | Physical             |
|---------|-----------|-------------------|------------|-----------------------|------------------|----------------------|
| Riser C | ard 1 (op | tion A, PII       | UCSC-PCI-1 | A-240M4)              |                  |                      |
|         |           |                   |            |                       |                  | Slot 2 Slot 1        |

| 5       | Full   | Full <sup>1</sup> | x16        | x24        | Yes <sup>2</sup> |                          |
| 4       | Full   | 3/4               | x8         | x24        | Yes <sup>2</sup> |                          |

### Notes . . .

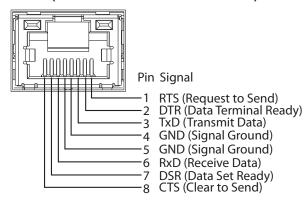

- 1. GPU capable slot
- 2. NCSI supported in only one slot at a time (default slot 5). If a GPU card is present in slot 5, NCSI support automatically moves to slot 4.

# **Serial Port Details**

The pinout details of the rear RJ-45 serial port connector are shown in *Figure 10*.

Figure 10 Serial Port (Female RJ-45 Connector) Pinout

# Serial Port (RJ-45 Female Connector)

# **Upgrade and Servicing-Related Parts**

This section lists the upgrade and servicing-related parts you may need during the life of your server. Some of these parts are configured with every server, and some may be ordered when needed or may be ordered and kept on hand as spares for future use. See *Table 45*.

Table 45 Upgrade and Servicing-related Parts for UCS C240 M4 LFF Server

| Spare Product ID (PID) | Description                                                                           |
|------------------------|---------------------------------------------------------------------------------------|
| UCSC-PCIF-01F=         | PCIe Full Height blanking panel for UCS C-Series Server <sup>1</sup>                  |
| UCSC-PCIF-C240M4=      | C240 M4 PCIe Riser Blanking Panel <sup>1</sup>                                        |
| UCSC-PCI-2-C240M4=     | C240 M4 PCIe Riser 2 Assembly <sup>1</sup>                                            |
| UCSC-PCI-1A-240M4=     | C240 M4 PCIe Riser 1 Assembly (x8 slot + GPU) <sup>1</sup>                            |
| UCSC-PCI-1B-240M4=     | C240 M4 PCIe Riser 1 Assembly (3 x8 slots) <sup>1</sup>                               |
| UCSC-PCI-1C-240M4=     | C240 M4 PCIe Riser 1 Assembly (SATA Boot + 2 PCIe slots) <sup>1</sup>                 |
| UCSC-IP-PCH-240M4=     | Interposer board + cables for onboard PCH SATA 6G Embedded Software RAID <sup>1</sup> |
| UCSC-MLOM-BLK=         | MLOM Blanking Panel                                                                   |
| UCS-240CBLMR12=        | C240 M4 set of 2 cables for 12 HDD backplane chassis <sup>2</sup>                     |
| UCSC-HS-C240M3=        | Heat Sink for UCS C240 M4 Rack Server <sup>1</sup>                                    |
| UCS-CPU-LPCVR=         | CPU load plate dust cover (for unpopulated CPU sockets)                               |
| UCS-GPUCBL-240M4=      | C240 M4 GPU Power Cable (1 cable per GPU card) <sup>1</sup>                           |
| N20-MBLIBATT=          | Replacement Lithium Battery for Server Motherboard (CR2032) <sup>1</sup>              |
| UCSC-FAN-C240M4=       | C240 M4 Fan Module (one)                                                              |
| UCSC-BAFF-C240M4=      | C240 M4 Air Baffle Replacement Kit                                                    |
| UCSC-PSU-BLKP240=      | Power Supply Blanking Panel for C240 M4 Servers <sup>1</sup>                          |
| UCSC-RAILB-M4=         | Tool-Less Ball Bearing Rail Kit for C220 M4 and C240 M4 rack servers                  |
| UCSC-CMAB-M4           | Reversible CMA for C240 M4 ball bearing rail kit                                      |
| UCS-SD-32G-S=          | 32 GB SD Card for UCS servers <sup>3</sup>                                            |
| UCS-SD-64G-S=          | 64 GB SD Card for UCS servers <sup>2</sup>                                            |
| UCS-USBFLSHB-16GB=     | 16GB Flash USB Drive                                                                  |
| N20-BKVM=              | KVM local IO cable for UCS servers console port                                       |
| UCS-CPU-GREASE3=       | M4 Server CPU thermal grease syringe - needed for heatsink seal <sup>4</sup>          |
| UCSX-HSCK=             | UCS Processor Heat Sink Cleaning Kit (when replacing a CPU) <sup>3</sup>              |

Table 45 Upgrade and Servicing-related Parts for UCS C240 M4 LFF Server

| Spare Product ID (PID) | Description                                                    |
|------------------------|----------------------------------------------------------------|
| UCSC-MRAID-SC=         | SuperCap for Cisco 12G SAS Modular RAID, including all cables. |

#### Notes . . .

- 1. This part is included/configured with your UCS server (in some cases, as determined by the configuration of your server).
- 2. Required if ordering the RAID controller as a spare or to replace damaged cables
- 3. This SD card is blank.
- This part should be ordered with the purchase of each optional or spare Intel Xeon E5-2600 v3 CPU processor kit

#### Adding an Additional CPU (with CPU heat sink) or Replacing CPUs

All Cisco UCS two CPU socket-capable servers can be upgraded from having one to having two CPUs configured or can also support replacement of the CPUs. You will need to order and install a heat sink when adding any additional CPU to a server. Instructions for installing the new CPU or replacing CPUs and heat sink can be found at the following link:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

See the section titled "Replacing CPUs and Heatsinks."

NOTE: Unlike previous generation servers, the C240 M4 has tool-less CPU sockets, so no separate tools (such as "pick n place" tools) are required to add or replace CPUs.

#### Motherboard Lithium Battery

You can order a replacement motherboard battery. Installation instructions are found at this link:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

See the section titled "Replacing the Motherboard RTC Battery."

#### Thermal Grease (with syringe applicator) for CPU to Heatsink Seal

Thermal grease must be applied to the top of the CPU where it comes in contact with the heat sink (a grease syringe also ships with each CPU spare option kit). Instructions for applying thermal grease are found at:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

See the section titled "Replacing CPUs and Heatsinks."

CAUTION: Use only the thermal grease specified for this server (UCS-CPU-GREASE3=). This thermal grease comes in a white-tipped syringe and is to be used only in the C220 M4 and C240 M4 servers. Other servers use thermal grease in a blue-tipped syringe (UCS-CPU-GREASE=).

Thermal grease for other systems may have different thermal conductivity properties and may cause overheating if used in the C220 M4 or C240 M4 servers.

DO NOT use thermal grease available for purchase at any commercial electronics store. If these instructions are not followed, the CPU may overheat and be destroyed.

NOTE: When you purchase a spare CPU, the thermal grease with syringe applicator is included.

#### Air Baffle Replacement Kit

Air baffles are designed to direct airflow through the server to maintain server temperature at a safe operating level. These baffles must always remain installed during server operation. The Air Baffle Replacement Kit includes the air baffles needed for one UCS C220 M4 server.

### CPU Heat Sink Cleaning Kit

The cleaning kit is used to remove the existing thermal compound from the bottom of the heat sink during a CPU replacement process. Instructions for cleaning are found at the following link:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

See the section titled "Replacing CPUs and Heatsinks."

NOTE: When you purchase a spare CPU, the CPU cleaning kit is included.

## **RACKS**

The Cisco R42610 rack (see *Figure 11 on page 78*) is certified for Cisco UCS installation at customer sites and is suitable for the following equipment:

- Cisco UCS B-Series servers and fabric interconnects
- Cisco UCS C-Series and select Nexus switches

The rack is compatible with hardware designed for EIA-standard 19-inch racks. Rack specifications are listed in *Table 46*.

Table 46 Cisco R42610 Rack Specifications

| Parameter                                               | Standard Rack                                    | Expansion Rack                                      |
|---------------------------------------------------------|--------------------------------------------------|-----------------------------------------------------|
| Dimensions (H x W x D)                                  | 78.74 x 24 x 43.38 in.<br>(2000 x 610 x 1102 mm) | 78.74 x 23.58 x 43.38 in.<br>(2000 x 599 x 1102 mm) |
| Dimensions (H $\times$ W $\times$ D) with packaging     | 89 x 33 x 47 in.<br>(2261 x 838 x 1194 mm)       | 89 x 33 x 47 in.<br>(2261 x 838 x 1194 mm)          |
| Distance from front mounting rail to rear mounting rail | 29.2 in (741 mm)                                 | 29.2 in (741 mm)                                    |
| Weight                                                  | 299.83 lb (136 kg)                               | 231. 49 lb (105 kg)                                 |
| Weight with packaging                                   | 354 lb<br>(161 kg)                               | 284 lb<br>(129 kg)                                  |
| Side panels included                                    | Yes                                              | No                                                  |
| Equipment mounting capacity                             | 42RU                                             | 42RU                                                |
| Static load capacity                                    | 2100 lb<br>(954 kg)                              | 2100 lb<br>(954 kg)                                 |
| Dynamic load capacity                                   | Not applicable                                   | Not applicable                                      |

NOTE: The AC input connector is an IEC 320 C-14 15 A/250 VAC power inlet.

Front view - door removed

#### **PDUs**

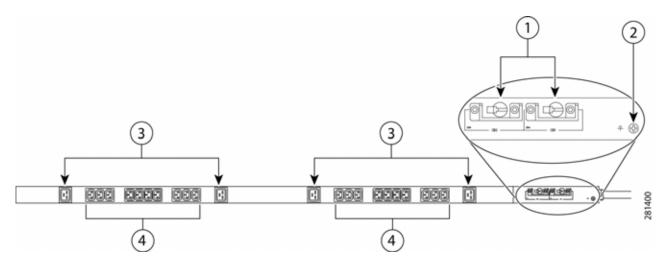

Cisco RP Series Power Distribution Units (PDUs) offer power distribution with branch circuit protection.

Cisco RP Series PDU models distribute power to up to 24 outlets. The architecture organizes power distribution, simplifies cable management, and enables you to move, add, and change rack equipment without an electrician.

With a Cisco RP Series PDU in the rack, you can replace up to two dozen input power cords with just one. The fixed input cord connects to the power source from overhead or under-floor distribution. Your IT equipment is then powered by PDU outlets in the rack using short, easy-to-manage power cords.

The C-series severs accept the zero-rack-unit (ORU) PDU. See Figure 12).

Figure 12 Zero Rack Unit PDU (PID = RP208-30-2P-U-2)

| 1 | Breakers          | 3 | C19 plugs |
|---|-------------------|---|-----------|
| 2 | Ground connection | 4 | C13 plugs |

Cisco RP Series PDU models provide two 20-ampere (A) circuit breakers for groups of receptacles. The effects of a tripped circuit are limited to a receptacle group. Simply press a button to reset that circuit.

## **KVM CABLE**

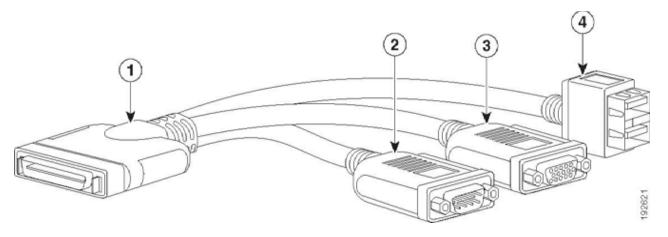

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in *Table 47*.

Table 47 KVM Cable

| Product ID (PID) | PID Description                   |
|------------------|-----------------------------------|
| N20-BKVM=        | KVM cable for server console port |

Figure 13 KVM Cable

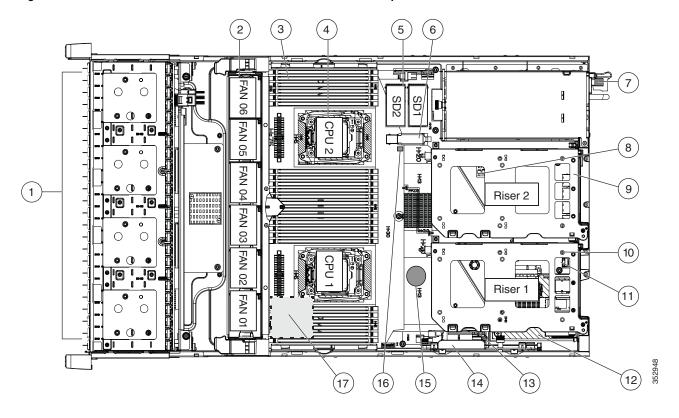

| 1 | Connector (to server front panel) | 3 | VGA connector (for a monitor)                         |
|---|-----------------------------------|---|-------------------------------------------------------|
| 2 | DB-9 serial connector             | 4 | Two-port USB 2.0 connector (for a mouse and keyboard) |

# Motherboard USB and SD Ports, and RAID Card Backup Locations

The C240 M4 LFF motherboard has a general-purpose USB socket and two SD sockets, as shown in *Figure 14*. The mounting locations for RAID card backup are also shown

Figure 14 Motherboard USB and SD Ports and RAID Backup Location

| 5 | SD1 connector (on riser 2 board) | 6  | USB 3.0 connector (on motherboard)                                                                        |

# **TECHNICAL SPECIFICATIONS**

# **Dimensions and Weight**

Table 48 UCS C240 M4 Dimensions and Weight

| Parameter                                             | Value              |
|-------------------------------------------------------|--------------------|
| Height                                                | 3.43 in. (8.70 cm) |
| Width (including slam latches)                        | 17.65 in.(44.8 cm) |
|                                                       | Including handles: |
|                                                       | 18.96 in (48.2 cm) |
| Depth                                                 | 29.0 in. (73.8 cm) |
|                                                       | Including handles: |
|                                                       | 30.18 in (76.6 cm) |
| Front Clearance                                       | 3 in. (76 mm)      |
| Side Clearance                                        | 1 in. (25 mm)      |
| Rear Clearance                                        | 6 in. (152 mm)     |
| Weight <sup>1</sup>                                   |                    |
| Maximum (12 HDDs, 2 CPUs, 24 DIMMs, 2 power supplies) | 67.5 lbs (30.6 kg) |
| Minimum (1 HDD, 1 CPU, 1 DIMM, 1 power supply)        | 39.2 lbs (17.8 kg) |
| Bare (0 HDD, 0 CPU, 0 DIMM, 1 power supply)           | 35.9 lbs (16.3 kg) |

#### Notes . . .

<sup>1.</sup> Weight includes inner rail, which is attached to the server. Weight does not include outer rail, which is attached to the rack.

# **Power Specifications**

The server is available with the following types of power supplies:

- 650 W (AC)
- 930 W (DC)
- 1200 W (AC)
- 1400 W (AC)

The general power specifications for the C240 M4 SFF server are listed as follows:

- 650 W (AC) power supply (see *Table 49*).
- 930 W (DC) power supply (see *Table 50*).
- 1200 W (AC) power supply (see *Table 51 on page 84*).
- 1400 W (AC) power supply (see *Table 52 on page 85*)

Table 49 UCS C240 M4 LFF Power Specifications 650 W AC power supply)

| Description                                | Specification                                                                                                                                                  |  |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| AC input voltage range                     | 90 to 264 VAC (self-ranging, 180 to 264 VAC nominal)                                                                                                           |  |
| AC input frequency                         | Range: 47 to 63 Hz (single phase, 50 to 60 Hz nominal)                                                                                                         |  |
| Maximum AC inrush current                  | 11 A Peak at +35 degree C, 208V                                                                                                                                |  |
|                                            | (charging current for EMI-X capacitors is not considered to be inrush current. The first 200 us of inrush time can be ignored to allow X-cap charging current) |  |
| Maximum AC input current                   | 7.6 Amps maximum at 100 VAC                                                                                                                                    |  |
|                                            | 3.65 Amps maximum at 208 VAC                                                                                                                                   |  |
| Maximum output power for each power supply | 650 W                                                                                                                                                          |  |
| Power supply output voltage                | Main power: 12 VDC                                                                                                                                             |  |
|                                            | Standby power: 12 VDC                                                                                                                                          |  |
| Power supply efficiency                    | 80Plus Platinum                                                                                                                                                |  |

NOTE: AC input connector is an IEC 320 C-14 15A/250VAC power inlet.

Table 50 UCS C240 M4 LFF Power Specifications 930 W DC power supply)

| Description                          | Specification                                         |
|--------------------------------------|-------------------------------------------------------|
| Class                                | ■ RSP1                                                |
| Input                                |                                                       |
| DC input voltage range               | ■ -40 to -72 VDC (self-ranging, 48 to 60 VDC nominal) |
| DC line input current (steady state) | ■ 23 A peak at 48 VDC                                 |
| Output                               |                                                       |
| 12 V main power output               | ■ 930 W                                               |
| 12 V standby power output            | ■ 30 W                                                |
