### Introduction

The GV-MFD2700 Series are indoor, fixed, mini-sized network cameras with 3-axis mechanism for easy and flexible installation. GV-MFD2700 Series can support H.265 video codec to achieve better compression ratio while maintaining high picture quality at reduced network bandwidths. The cameras can process scenes with contrasting intensity of lights and produce clear image using the built-in WDR Pro. They are each equipped with a Super Low Lux CMOS image sensor which allows the camera to provide a color live view in near darkness.

**Note:**

1. It is required to apply patch files to all the supported software.
2. The signal range and data throughout may vary depending on the network conditions and other environmental factors.
3. Mind the following when using a memory card for recording:
  - Recorded data on the memory card can be damaged or lost if the data are accessed while the camera is under physical shock, power interruption, memory card detachment or when the memory card reaches the end of its lifespan. No guarantee is provided for such causes.

- The stored data can be lost if the memory card is not accessed for a prolonged period of time. Back up your data periodically if you seldom access the memory card.
  - Memory cards are expendable and their durability varies according to the conditions of the installed site and how they are used. Back up your data regularly and replace the memory card annually.
  - To avoid power outage, it is highly recommended to apply a battery backup (UPS).
  - For better performance, it is highly recommended to use Micro SD card of MLC NAND flash, Class 10.
  - Replace the memory card when its read/write speed is lower than 6 MB/s or when the memory card is frequently undetected by the camera.
4. Specifications are subject to change without notice.
