## Extension Poles

AMRE5000 Series extension tubes with internal cable management (50mm diameter). These extension tube will allow you to lower your projector installation height to suit your installation. These tubes can be combined with any of the same series (3", 6", 12", 24 and 48") to provide flexible configurations in different lengths. The tubes can help lower the projector to your desired height from the ceiling if you do not want to rely on screen height or lens shift/ keystone adjustments provided by your projector. Need more space for wires behind your wall mounted projector? You can also use this tube with the projector mount AMRP100 when wall mounting. The extension tube allows for larger projectors to be wall mounted and also provides extra space between the projector and wall when cabling or venting is required.

- Lower projector by additional inches from ceiling
- Internal cable management through inside of tube allows for clean installation.
- Strong lightweight aluminum construction
- Easy and fast installation
- Can also be used in a wall mount situation when additional space between projector and wall are needed.
- Available in both Black or White to match your projector colour

\*Please note that the projector mount (AMRP100, or AMRDCP100KIT) has about 8.6 inches of drop so the extension pole will add to that total length.
