

Cisco Aironet Active Sensor

The Cisco Aironet Active Sensor is a dedicated wireless network sensor designed for assuring optimal performance across the network.

Figure 1. Cisco Aironet Active Sensor

Product overview

The Cisco® Aironet® Active Sensor (Figure 1) is a compact network sensor designed to monitor your wireless network.

With the Aironet Active Sensor, your IT department can simulate real-world client experiences so that it can validate wireless performance for critical venues and high-value locations such as conference halls and meeting rooms. Also, a scheduled test by the sensor helps make sure that your network can handle an influx of VIP clients so that they are able to have a smooth wireless experience free of drops and lag time. How does this device do all of this? Thanks to Cisco AirProbe, the Aironet Active Sensor can proactively test and accurately predict the user's experience.

This means that your wireless network won't be caught short when an increased number of devices connect to the network. You'll already know how much bandwidth is available immediately before the event, and you can adjust accordingly.

Not only does the Active Sensor brilliantly simulate and predict wireless performance, but it's also the perfect device for making sure that your network is running to its fullest potential. Using the Active Sensor, you can test your network with proactive monitoring capabilities. This capability allows you to learn about potential issues before it's too late.

Only Cisco can provide high-fidelity insight at the ground level.

The Active Sensor can be plugged in anywhere. Other sensor products are often at ceiling level, sometimes providing IT with a less-than-accurate network assessment, since most clients are at eye level. When installed at the level where most mobile devices are apt to be, the Active Sensor allows for a better understanding and a more comprehensive simulation of real clients.

The Aironet Active Sensor is fully compliant with the 802.11ac Wave 2 standard and has full Cisco DNA™ Assurance support with Cisco DNA Center. It comes with multiple powering options:

- Direct AC power plug
- Power over Ethernet (PoE)
- Micro USB power

Features and benefits

The Active Sensor supports reliable wireless connections that provide a robust, mobile end-user experience. Table 1 lists the sensor's features and benefits.

Table 1. Features and benefits

Feature	Benefit
802.11ac Wave 2 support	The Active Sensor can simulate clients that support 802.11ac Wave 2 and multiuser multiple-input multiple-output (MU-MIMO). MU-MIMO allows simultaneous data transmission to multiple Wave 2–capable clients to improve the client experience. Prior to MU-MIMO, 802.11n and 802.11ac Wave 1 access points could transmit data to only one client at a time. This was typically referred to as single-user MIMO (SU-MIMO). The Active Sensor can also simulate clients that are 802.11ac Wave 1 compliant.
Integrated Bluetooth 4.1	Integrated Bluetooth Low Energy (BLE) 4.1 radio for location and asset tracking (future availability).

Product specifications

Table 2 lists the specifications for the Cisco Aironet Active Sensor. Table 3 lists the RF specifications.

Table 2. Specifications

Item	Specification								
Authentication and security	<ul style="list-style-type: none"> • Advanced Encryption Standard (AES) for Wi-Fi Protected Access 2 (WPA2) • 802.1X, RADIUS authentication, authorization and accounting (AAA) • 802.11r • 802.11i

¹ MCS Index: The Modulation and Coding Scheme (MCS) index determines the number of spatial streams, the modulation, and the coding rate and data rate values.

² A guard interval (GI) between symbols helps receivers overcome the effects of multipath delay spreads.

Cisco Services

Realize the full business value of your technology investments faster with intelligent, customized services. Cisco Services offers a comprehensive lifecycle of services for the new WLAN infrastructure innovations and associated WLAN solutions, including advisory, implementation, optimization, technical, managed, and training services. With unmatched wireless networking expertise, industry-leading best practices, and innovative automation tools and contextual data, we can help reduce overall upgrade, refresh, and migration costs as you introduce new wireless infrastructure, sensors, and software into your wireless network. [Learn more.](#)

Warranty information

The Cisco Aironet Active Sensor comes with a 1-year limited warranty that provides full warranty coverage of the hardware. The warranty includes 10-day advance hardware replacement and ensures that software media is defect-free for 90 days. For more details, visit <https://www.cisco.com/go/warranty>.

Find warranty information on Cisco.com at the [Product Warranties](#) page.

Cisco Capital

Financing to help you achieve your objectives

Cisco Capital[®] can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce CapEx. Accelerate your growth. Optimize your investment dollars and ROI. Cisco Capital financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital is available in more than 100 countries. [Learn more.](#)
