Test Multiple Devices On A Single Shelf

Brackets for all devices can quickly be installed on the shelf by simply placing the bracket screw side down, in the desired location and sliding it to the desired width. Once they are correctly placed, they are locked-in by simply tightening a nut from the bottom. Flexible rubber bumpers firmly hold devices of varying thicknesses in place, while protecting them from scratches and vibration.

Accessories for Organization

With so many devices on one shelf, cables will inevitably get in the way. To solve this, add a cable management arm and 13" cantilever shelf to your order. Cable management arms are effective at organizing cables in a sliding shelf while the additional shelf stores power cables.

Enterprise Scale Solutions

With the right design even products made for the desktop can be great in the data center.
