- Max Arm Length: 21"

Package includes:

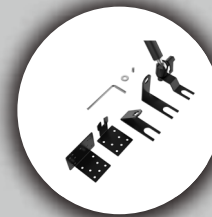

- (1) Tablet enclosure
- (1) Stand body
- (2) Keys
- (1) Set of hardware
- (1) Set of tablet adapters

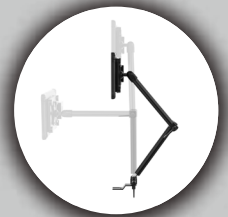

For delivery drivers – or anyone who needs a wireless tablet case and stand combination for cars, commercial fleets, and trucks, look no further than CTA Digital's Vehicle Mount with Inductive Charging Case Kit. The durable, splash-proof and drop-tested case features a powerful inductive charging back plate that prevents the need to remove the iPad to plug in a charging cable. The case sits securely on a multi-jointed tablet mount that's easy to install onto – and remove from – any seat rail, all without the need to drill into your vehicle. This flexible, multi-jointed tablet mount keeps your tablet fully accessible. The aluminum arm features tension-locking ball socket joints at the base and head, plus an additional rotating knee joint, giving you virtually infinite positioning options. To use, simply plug the power cable into your car's power socket. Plug the case into your iPad's charging port. When the inductive pads align, an electromagnetic field charges the battery. When ready to take your iPad with you, simply pop the case off the stand, slip your hand into the padded strap at the rear of the case, and you're set. Rear magnets allow for easy return to a mounting stand. This kit is compatible with iPad 7th and 8th Generation 10.2-inch, iPad Pro 10.5-inch, iPad Air 3 & 4, and more.
