

MDAC-8355

55" 4K UHD multi-modality, medical-grade ITE display

- **Large ultra-high-definition monitor**
- **Medical-grade ITE device**
- **Flexible display for image-guided therapies**

The MDAC-8355 is a 55" 4K ultra-high-definition medical-grade ITE display, designed exclusively for OEMs & system integrators in the field of image-guided therapies.

With its unique in-built internal picture composition capability, the MDAC-8355 is suitable for displaying multi-modality images from a wider range of image-guided systems.

The MDAC-8355 can be integrated into your image-guided system to support clinical teams (within interventional radiology, cardiology, radiation oncology, NIR-guided surgery, and endovascular robotics) who perform both routine and complex procedures where high quality, clean, sharp and more defined multi-modality images need to be displayed simultaneously. It can be wall- or ceiling-mounted and packaged for specific clinical applications on a medical cart.

With lifetime luminance stability and DICOM calibration assured, clinical teams who make fast decisions during image-guided procedures can work with optimal viewing experience.
