Installation Guide

BE9400 Tri-Band PoE 2.5G Insight Managed
WiFi 7 Access Point

Model WBE710

Package contents

Access Point Model WBE710

Mount plate
[The adjustable size is set at the "P1" position.]

Port cover (comes attached)

Shallow clip

Deep clip

CAUTION: Terms of Use

This device must be professionally installed. It is the installer's responsibility to follow local country regulations including operations within legal frequency channels, output power and DFS requirements. Vendor or Reseller or Distributor is not responsible for illegal wireless operations. Please see Device's Terms and Conditions for more details.

NOTE: During installation, if you do not see your country or region listed in the menu, update the access point's firmware and check again. If you still do not see your country or region listed, contact NETGEAR support.

Overview

1 Status LED

2 LAN/PoE port

3 DC power connector

4 Reset button

Step 1: Connect the WBE710 to your network

Before you install the WBE710 access point (AP) at its permanent location, first test the AP by connecting it to your network and powering it up.

NOTE: The multiple mounting options for the AP are described in the NETGEAR Pro WiFi Mount Installation Guide, which you can download from the NETGEAR Download Center at netgear.com/support/download. The QR code for the NETGEAR Download Center is shown at the right.

CAUTION: After you are done testing the AP, power off the AP and let it cool down for 10 minutes before you mount it at its permanent location.

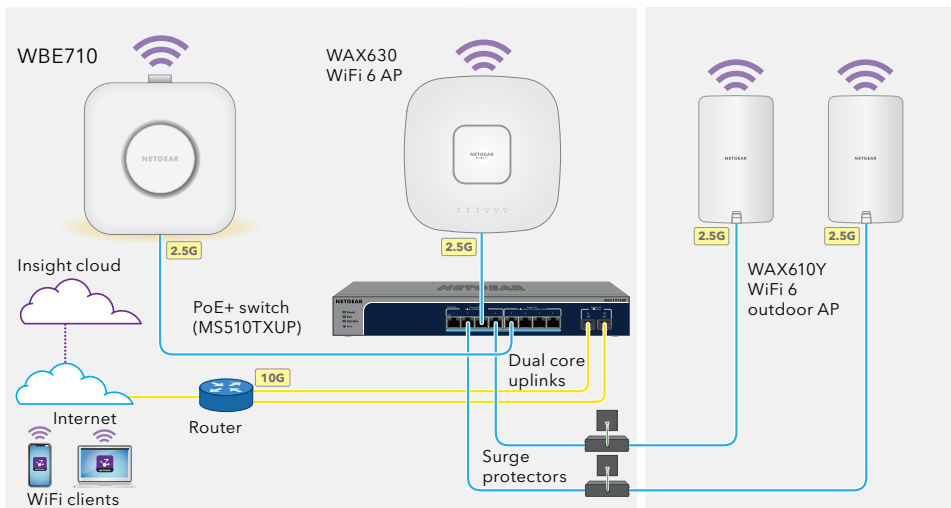

The AP's LAN/PoE port supports a speed of up to 2.5 Gbps. The AP is designed to use a PoE cable for power and Internet, but you can use a separately purchased 12V (2.5A) power adapter and Ethernet cable:

- **Use a PoE cable:** Connect one end of an Ethernet cable to the LAN/PoE port of the AP and connect the other end to a PoE+ switch port that supplies 80.3at PoE+ (30W) power. Make sure that the switch has Internet connectivity.
- **Use a 12V (2.5A) power adapter:** Connect the power adapter's DC plug to the AP, and insert the power adapter in a power outlet. Next, connect one end of an Ethernet cable to the LAN/PoE port of the AP, and connect the other end to a port on a switch or router with an Internet connection.

The power LED on the AP lights. For more Information, see the table with LED information.

The AP receives an IP address from a DHCP server (usually a router in your network). If your network does not include a DHCP server, the AP uses its default IP address: 192.168.0.100.

Sample connections

After starting up and during setup, the LED can light in these colors:

Normal behaviour	
	Off: No power is supplied to the AP.
	Solid amber, temporarily: The AP is starting or the Reset button was pressed.
	Solid magenta: The AP is initializing.
	Blinking magenta, slowly: The AP continues to initialize.
	Blinking amber fast, temporarily: The AP is updating firmware or is being reset to factory default settings.
	Solid blue: The AP started up, functions in Insight mode, and is connected to the Insight cloud-based management platform.

	Solid green: The AP started up and functions either as a standalone access point or as an Insight discovered access point that is not connected to the Insight cloud-based management platform.
	Blinking blue: At least one WiFi client is connected to the AP. The speed of blinking depends on the transmit and receive data rate of connected clients.
	Blinking multicolor: The AP is functioning as a node in an Insight Instant Mesh WiFi Network and the mesh setup is in progress.
Problem indication	
	Blinking green, continuously: The PoE power that the AP is receiving is not at the required PoE+ (802.3at) level.
	Blinking amber slowly, continuously: The AP did not receive an IP address from a DHCP server.
	Solid amber, continuously: A boot error occurred or the AP is malfunctioning.

NOTE: Other LED behavior exists, including LED behavior for an Insight Instant Mesh network. For more information about the LED behavior, see the user manual, which you can download by visiting netgear.com/support/download.

Step 2: Discover and manage the AP

Your new AP supports the NETGEAR Insight cloud-based management platform for remote management. Insight offers automated monitoring and notifications, plus add-on services like Insight Instant Mesh that are not available in standalone mode. Alternatively, you can manage the AP locally in standalone mode through the device UI.

For information about creating an Insight Premium account or Insight Pro account, visit kb.netgear.com/000044343. Your my.NETGEAR.com account is also your Insight account, so your credentials let you log into the Insight Cloud Portal or the Insight app. For more information, visit the following pages:

- netgear.com/business/services/insight
- kb.netgear.com/000061848

To manage the AP, use one of the methods in this table:

A.	Insight Cloud Portal remote management	NETGEAR Insight Cloud Portal See A. Use the NETGEAR Insight Cloud Portal to manage the AP
B.	Insight app remote management	NETGEAR Insight app See B. Use the NETGEAR Insight app to manage the AP
C.	Standalone local management	Web browser See C. Use a web browser to manage the AP in standalone mode

 **CAUTION:** If you add the AP to Insight before connecting it to power for the first time, wait 10 minutes to allow the default login credentials to be replaced by the Insight network location credentials. However, if you want to manage the AP as a standalone device, do not add the AP to Insight before connecting it to power for the first time. You can always add the AP to Insight after initial configuration.

A. Use the NETGEAR Insight Cloud Portal to manage the AP

The Insight Cloud Portal provides access to a complete set of remote management tools, including the topology view. For Insight Pro users, it offers a quick way to add multiple APs at the same time.

1. Make sure that the AP is connected to the Internet.
2. On a computer or tablet, visit insight.netgear.com.
3. Enter the email address and password for your NETGEAR account and click the **NETGEAR Sign In** button.
4. If you are an Insight Pro user, select the organization to which you want to add the AP.
5. Add a new network location where you want to add the AP, or select an existing network location.

The device admin password that you set for the network location replaces the

existing admin password on all devices that you add to the network location.

6. Click the **+** (**Add Device**) button.

NOTE: If you are an Insight Pro user, you can either add a single device or you can add multiple Insight-managed devices by uploading a device list in a CSV file.

7. In the Add New Device pop-up page, enter the AP's serial number and MAC address, then click **Go**.
8. Optionally change the device name of the AP, then click **Next**.

A page displays a confirmation that setup is in progress.

NOTE: If the AP is online but Insight does not detect the AP, the firewall at the physical location where the AP is located might prevent communication with the Insight cloud. In that situation, add port and DNS entries for outbound access to the firewall. For more information, see kb.netgear.com/000062467.

The AP automatically updates to the latest Insight firmware and Insight location configuration. This might take up to 10 minutes, during which time the AP will restart.

The LED lights solid blue when the AP is connected to Insight. The AP is now an Insight managed device that is connected to the Insight cloud-based management platform.

B. Use the NETGEAR Insight app to manage the AP

The Insight app provides a convenient way to add new devices, receive real-time notifications, and manage your network from anywhere.

1. Connect your mobile device to the AP's setup SSID (WiFi network name) using one of these methods:
 - **Scan the QR code:** Scan the QR code on the AP label to connect to the setup SSID.
 - **Connect manually:** The setup SSID is on the AP label and is shown in the format NETGEARxxxxxx-SETUP, where xxxxxx are the last six digits of the AP's MAC address. The default WiFi passphrase is **sharedsecret**.
2. Open the NETGEAR Insight app.

3. Enter the email address and password for your account and tap **LOG IN**.
4. Select a network location, or add a new network location where you want to add the AP by tapping the **Next button** and then tapping **OK**.

The device admin password that you set for the network location replaces the existing admin password on all devices that you add to the network location.

In most situations, Insight detects the AP automatically, which can take several minutes.

5. To add the AP to your network location, do one of the following:
 - If the AP is automatically detected and listed in the Insight Manageable Devices section, tap the icon for the AP, and then tap the **ADD DEVICE** button.
 - If the AP is not automatically detected, or you prefer to use another method to add the AP, tap the **+** icon in the top bar, and do one of the following:
 - Tap the **SCAN BARCODE OR QR CODE** button, and then scan the AP's code.
 - Tap the **Enter Serial Number and MAC Address** link, and then manually enter the AP's serial number and MAC address.
6. If prompted, name the AP and tap the **Next** button.

The AP automatically updates to the latest Insight firmware and Insight location configuration. This might take up to 10 minutes, during which time the AP will restart.

The LED lights solid blue when the AP is connected to Insight. The AP is now an Insight managed device that is connected to the Insight cloud-based management platform.

C. Use a web browser to manage the AP in standalone mode

1. Connect your computer or mobile device to the AP's setup SSID (WiFi network name) using one of the following methods:
 - **Scan the QR code:** Scan the QR code on the AP label to connect to the setup SSID.

- **Connect manually:** The setup SSID is on the AP label and is shown in the format NETGEARxxxxxx-SETUP, where xxxxxx are the last six digits of the AP's MAC address. The default WiFi passphrase is **sharedsecret**.

2. On your computer, launch a web browser and, in the address bar, enter **aplogin.net**.

Your browser might display a security warning because of the self-signed certificate on the AP, which is expected behavior. You can proceed, or add an exception for the security warning. For more information, see kb.netgear.com/000062980.

3. Enter the AP user name and default password. The user name is **admin**. The default password is **password**. The user name and password are case-sensitive.

4. Select the **Web-browser (Local)** radio button.

The Day Zero Easy Setup page displays.

5. Follow the instructions on the Day Zero Easy Setup page, and then click the **Apply** button.

We recommend that you make a note of the new admin password, SSID (WiFi network name), WiFi passphrase, and IP address to keep in a safe place.

A message displays to indicate that your settings are being applied.

6. If the WiFi connection of your computer or mobile device is terminated, reconnect to the AP using the new SSID and WiFi passphrase that you set on the Day Zero Easy Setup page.

7. When the login page displays, you can log in to the AP using your new admin password to configure the AP.

For information about configuring the AP, see the user manual, which you can download by visiting netgear.com/support/download.

We recommend that you register your AP with NETGEAR.

8. To register your AP with NETGEAR, from a computer or mobile device that is connected to the Internet, visit my.NETGEAR.com to log in or create a new account, then click the **Register New Product** button to register your AP.

A confirmation email is sent to your NETGEAR account email address.
