Important safety information

Please read this instruction manual carefully and completely before using the product.
Always include this instruction manual when passing the product on to third parties.
Do not use an obviously defective product.

Preventing damage to health and accidents
Do not listen at high volume levels for long periods of time to prevent hearing damage.
Always maintain a distance of at least 3.94” (10 cm) between the ear cups and the cardiac pacemaker or implanted defibrillator since the product generates permanent magnetic fields.
Keep the product, accessories and packaging parts out of reach of children and pets to prevent accidents and choking hazards.
Do not use the product in situations which require special attention (e.g. in traffic).

Preventing damage to the product and malfunctions
Always keep the product dry and do not expose it to extreme temperatures (hairdryer, heater, extended exposure to sunlight, etc.) to avoid corrosion or deformation.
Only use attachments/accessories supplied or recommended by Sennheiser.
Only clean the product with a soft, dry cloth.
Unplug the power supply unit from the wall socket to completely disconnect the product from the mains power supply.
Do not short-circuit the contacts of the product. Make sure that no metal objects (e.g. paper clips, hair pins, earrings) come into contact with the interfaces and contacts.
Only use the base station or the CH 10 charger for charging D 10 series headsets.

Intended use/Liability
The headset system can be used for calling and – together with a computer (VoIP) and/or a telephone – for audio input/output and is intended for professional office or call center use.
It is considered improper use when this product is used for any application not named in this instruction manual.
Sennheiser does not accept liability for damage arising from abuse or misuse of this product and its attachments/accessories. The risk is to be borne by the user.
Sennheiser is not liable for damages to USB devices that are not consistent with the USB specifications.
Sennheiser is not liable for damages resulting from the loss of connection due to flat or overaged rechargeable batteries or exceeding the DECT transmission range.
Safety instructions for Lithium-Polymer rechargeable batteries

In extreme cases, abuse or misuse of rechargeable batteries can lead to:

**WARNING**
- explosion,
- fire development,
- heat generation or
- smoke/gas development.

Scope of delivery

The D 10 series base stations marked with ML in their name are optimized for Microsoft® Lync™.

Base stations with components

- **D 10 BS USB**: for computer
- **D 10 BS USB ML**: for computer, optimized for Microsoft Lync
- **D 10 BS Phone**: for fixed line phone

The scope of delivery includes – depending on the product purchased – a base station and/or a headset with corresponding components.

Headset with components

- **D 10 HS**: monaural, with different wearing styles

Setting up and connecting the base station

Setting up the base station

- Insert the headset holder into the recess of the base station.
- Place the base station at a minimum distance of 15 cm from the fixed line phone.

Connecting the base station to the mains power supply

1. Connect the plug of the power supply unit to the DC IN socket (marked yellow). Connect the power supply unit to a wall socket.
2. The Link LED 🔄 lights up red.

Disconnecting the base station from the mains power supply

- If the product is not used for extended periods of time, unplug the power supply unit from the wall socket.
Connecting the base station to a fixed line phone

- Check which connection possibility is best suited for your telephone.
- Follow the instructions in the corresponding chapter.

<tr>
<td>Connection to an optional mechanical handset lifter</td>
<td>11</td>
</tr>
</tbody>
</table>

Connecting the base station to a fixed line phone without headset socket

1. Disconnect the handset cable from the telephone and connect it to the Handset socket (marked gray) on the base station.
2. Connect the telephone cable to the handset socket on the telephone and to the Phone socket (marked green) on the base station.
3. Use a pointed object (e.g. a ball pen) to set the DIP switches 1 and 2 to the position shown.
II Connecting the base station to a fixed line phone with headset socket

1. Connect the telephone cable to the headset socket on the telephone and to the Phone socket (marked green) on the base station.

2. Use a pointed object (e.g. a ball pen) to set the DIP switches 1 and 2 to the position shown.

III Connecting the base station to an optional mechanical handset lifter

The Sennheiser HSL 10 mechanical handset lifter is an optional accessory available from your Sennheiser partner. The handset lifter allows you to answer calls even when you are away from your desk.

- Connect the base station to the fixed line phone as described in chapter [I] or [II].
- Connect the handset lifter to the ACC socket on the base station.
- Connect the handset lifter to the fixed line phone. For more information, refer to the instruction manual of the HSL 10 handset lifter.
Connecting the base station to an optional electronic hook switch control (EHS)

The necessary EHS connection cables as well as adapter cables for manufacturer specific standards are available as optional accessories from your Sennheiser partner. The corresponding quick guides are supplied with the cables or can be found on the product page on our website at www.sennheiser.com/cco.

By way of example of a Siemens and an Alcatel adapter cable, the following describes how to connect the base station to an electronic hook switch.

1. Connect the base station to the fixed line phone.
2. Use a pointed object (e.g. a ball pen) to set the DIP switch to the position shown.

**Siemens, Agfeo, Aastra, Auerswald, etc.**

For an overview of the available connection and adapter cables, visit the D 10 series product page on our website at www.sennheiser.com/cco or contact your Sennheiser partner.
Connecting the base station to a computer

- Connect the USB cable to the PC socket (marked orange) on the base station and to a USB socket of your computer. The operating system detects the USB audio device “Sennheiser D 10” and installs the necessary drivers.

Sennheiser PC software

The free Sennheiser PC software allows you to add value to your Sennheiser products. The Sennheiser Updater, for example, facilitates easy updating of products with new software. For more information, visit our website at www.sennheiser.com/cco/software.

Charging the headset before first use

Charge the rechargeable battery for at least 20 minutes without interruption before using it for the first time. A complete charging process takes about 60 minutes (see page 29).

During the first charging process, it may take up to 5 minutes until the Headset LED lights up blue.
Individually adjusting the headset

Using the headset with the ear hook

1 Insert the ear hook into the ear hook slot.
2 Pre-shape the ear hook by bending it slightly.
3 Place the ear hook around your ear.
4 Bend the flexible ear hook so that the headset sits comfortably and securely on your ear.
Using the headset with the headband

1. Remove the ear hook by carefully pulling it upwards.
2. Attach the headset to the headset holder of the headband.
3. Rotate the microphone boom and adjust the headset so that the ear pad rests comfortably on your right or left ear.

![Diagram showing steps 1, 2, and 3 for adjusting the headset with the headband.](image-url)
Configuring the headset system

Adjusting the headset system using the DIP switches

Use a pointed object (e.g. a ball pen) to set the DIP switches to the desired position.

Configuring the handset lifter/hook switch – DIP switches 1 and 2

Adjusting the audio signal by means of the dial tone

1. Put on the headset.
2. Press the Link button on the headset. The Link LED on the base station lights up blue.
3. Lift the handset. You hear a dial tone.
4. Set the ABC switch to the position A, B or C so that you can hear a clear dial tone in the headset.
Configuring the headset system

Adjusting the volume of the transmission

Adjusting the microphone volume of the call transmission

By default, the microphone volume control is set to position 4. This setting is suitable for most telephones.

- Make a call to someone who will help you find the correct sensitivity setting for your microphone.
- Turn the microphone volume control so that the other party can hear you at a comfortable level.

Adjusting the microphone volume of the USB transmission

Some softphones adjust the microphone sensitivity automatically.

- Activate this function in order to be able to optimally use the microphone and, via your operating system, adjust the microphone sensitivity so that the other party can hear you at a comfortable level (see the Help function of your operating system).

Adjusting the volume of the ring tone

Adjusting the headset’s ring tone volume and the volume of the acoustic signals

- Make sure that the headset is in standby mode (the Link LED on the base station is off). If necessary, press the Link button on the headset.
- To adjust the volume, move the Audio button as shown in the diagram. When the minimum or maximum volume is reached, you hear a double beep in the headset.

Adjusting the ring tone volume of the base station

- Turn the volume control to reduce or increase the ring tone volume.
Adjusting the automatic audio transmission “Auto Audio”

With the “Auto Audio” function activated and in the case of a USB connection, the audio signals – e.g. from Windows® Media Player® or iTunes® – are automatically transmitted to the headset.

When you receive a call or when a connection to Skype™ or HeadSetup is established, the audio transmission stops and you hear for example the ring tone. The “Auto Audio” function is activated by default.

Deactivating the “Auto Audio” function

► Use a pointed object to press the Set button for approx. 5 seconds. The Link LED rapidly flashes red several times.

Activating the “Auto Audio” function

► Use a pointed object to press the Set button for approx. 5 seconds. The Link LED rapidly flashes blue several times.
Making calls using the headset

Adjusting the volume

WARNING
Hearing damage due to high volumes!
Listening at high volume levels for long periods can lead to permanent hearing defects.
▷ Set the volume to a low level before putting on the headset.
▷ Do not continuously expose yourself to high volumes.

Adjusting the volume of the audio signal
You can adjust the volume of the audio signal by means of the dial tone or during a call.
▷ Make sure that a link is established between headset and base station (the Link LED on the base station lights up blue). If necessary, press the Link button on the headset.
▷ To adjust the volume, move the Audio button as shown in the diagram. When the minimum or maximum volume is reached, you hear a double beep in the headset.

Swapping the direction of the volume buttons
▷ On the Audio button, check which direction is assigned “volume down”.
▷ Simultaneously press and hold the Link button and the Audio button for 5 seconds.
The Headset LED alternately flashes blue/red.
▷ Push the Audio button in the direction “volume down” until the Headset LED goes off. The direction of the volume up/down function of the Audio button is changed. The headset switches to standby mode.
Muting the headset’s microphone

- Press the Audio button.
  The microphone is muted. While the microphone is muted, the Link LED on the base station flashes red.

Unmuting the headset’s microphone

- Press the Audio button.
  You hear a beep in the headset. The muting is canceled and the Link LED on the base station lights up blue.

If you leave the DECT range

In normal office buildings, the range between headset and base station is up to 55 m. If, during a call, the audio quality deteriorates or the link breaks down completely, you hear a descending sequence of beeps in the headset. The Link LED on the base station lights up red.

- Re-enter the DECT range of the base station within 60 seconds.
  You hear a ring tone in the headset.

- Press the Link button on the headset to resume the call.
  If your softphone supports call control, the call will automatically be ended 60 seconds after leaving the DECT range.
Calling via the fixed line phone using the headset

Establishing/disconnecting a wireless link

If you want to use the headset to accept, make or end calls, you have to establish a wireless link between headset and base station. You can choose between manual and automatic link establishment (see “Auto Link” on page 17).

> Press the Link button on the headset.

– The link is established. The Link LED  on the base station lights up blue and the Headset LED flashes blue slowly.

OR

– The link is disconnected. The Link LED  on the base station and the Headset LED go off. The headset is in standby mode.

If your telephone has a built-in electronic hook switch supporting the MSH standard, you can only disconnect the wireless link between headset and base station by placing the headset into the base station.

Managing calls without using a call control functionality

Accepting a call: You hear the ring tone of the fixed line phone. Press the Link button on the headset. Lift the handset or press the “accept call” button on your fixed line phone.

Making a call: Press the Link button on the headset to establish a link between base station and headset. Lift the handset and dial the desired number. The phone connection is established.

Ending a call: Hang up the handset or press the “end call” button on your fixed line phone.
Managing calls using a call control functionality (EHS, HSL 10)

**Accepting a call:** You hear a ring tone in the headset. Press the Link button on the headset to accept the call. The handset lifter/electronic hook switch lifts the handset.

**Making a call:** Dial the desired number. Press the Link button on the headset to establish a link between base station and headset. The phone connection is established automatically.

**Ending a call:** Press the Link button. If the other party hangs up, your telephone and your headset become automatically ready to receive the next call.

Frequent callers who use an electronic hook switch with DHSG capability are recommended to activate the “Fast Link” function for faster link establishment (see page 15)

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Switch position]</td>
<td>Fast Link (only when DHSG standard is used) Recommended for frequent callers. Shorter battery life. Fast link establishment without delay due to hidden link to the base station.</td>
</tr>
</tbody>
</table>

Switching a call between headset and fixed line phone

- Press the Link button on the headset to switch between headset and handset of the fixed line phone during an ongoing call.

  In case of a fixed line phone with a handset lifter/an electronic hook switch, this switching can only be done on the fixed line phone.
Calling via the computer using the headset

Establishing/disconnecting a wireless link
If you want to use the headset to accept, make or end calls, you have to establish a wireless link between headset and base station. You can choose between manual and automatic link establishment (see “Auto Link” on page 17).

▶ Press the Link button on the headset.
  – The link is established. The Link LED on the base station lights up blue and the Headset LED flashes blue slowly.
  OR
  – The link is disconnected. The Link LED on the base station and the Headset LED go off. The headset is in standby mode.

Managing calls via the softphone

Accepting a call: The softphone signals that you are receiving a call. You hear a ring tone in the headset. Click on “Accept call” on your softphone.

Making a call: Press the Link button on the headset to establish a link between base station and headset. If the “Auto Audio” function is activated, this step is not necessary (see page 20). Start the call using your softphone.

Ending a call: End the call using your softphone.
Managing calls via the headset

The Microsoft® Lync™ softphone supports this function automatically. If you use another softphone, please visit our website at www.sennheiser.com and check whether and which free Sennheiser software you additionally require. If necessary, install the software in order to manage calls directly via the headset.

Accepting a call: The softphone signals that you are receiving a call. You hear a ring tone in the headset. Press the Link button on the headset to accept the call.

Making a call: Start the call using your softphone, the audio signal is automatically transmitted to the headset.

Ending a call: Press the Link button. If the other party hangs up, your softphone and your headset become automatically ready to receive the next call.
Making a conference call

The headset system allows you to make a conference call with up to 4 D 10 series headsets. The first headset paired (master) is used control the call establishment and end of conversation.

Pairing the MASTER headset with the base station

The Link LED \( \Rightarrow \) on the base station is off (headset is disconnected) or lights up red (no headset paired).

- Place the master headset into the base station. The Headset LED alternately flashes blue/red until a link to the base station is established. The Headset LED flashes blue 3 times.
- Take the headset out of the base station and press the Link button to connect the headset with the base station. The Link LED \( \Rightarrow \) on the base station lights up blue.
Adding a GUEST headset to a conference call

- Press and hold the Audio button while placing the guest headset into the base station of the master headset. The Headset LED alternately flashes blue/red until a link to the base station is established. The Headset LED flashes blue 3 times.
- Take the guest headset out of the base station. You hear a beep in the master headset.
- To add the guest headset to the conference call, press the Link button on the master headset within 15 seconds.
- Repeat this procedure to add additional guest headsets to the conference call.

Call the other party. The Link LED on the base station flashes blue.

Dropping a GUEST headset from the conference call

- Press the Link button on the guest headset. The guest headset is dropped from the conference call.

“easy pairing”

To subsequently use the guest headset with other base stations, place the guest headsets into the other base stations. The Headset LED alternately flashes blue/red until a link is established.

Ending a conference call

- Place the master headset into the magnetic holder of the base station to end the conference call and to drop the guest headsets from the conference call.
Charging the headset and storing the headset system

Charging the headset

Always store the headset in the base station to ensure that it is fully charged when needed. The intelligent battery charging technology prevents over-charging.

Place the headset into the magnetic holder of the base station. The Headset LED lights up blue and the rechargeable battery is being charged. The Charge status LED on the base station indicates the charge status:

Shortly before the rechargeable battery is about to run flat, only one LED segment lights up weakly. The Headset LED flashes red and you hear three beeps. You have several minutes of battery reserve. When the rechargeable battery is flat, the headset switches off.

If the headset is outside the range of the base station, it will switch off after 30 minutes in order to conserve battery power.
Charging the headset and storing the headset system

**Charging the headset using the optional CH 10 headset charger**
The CH 10 headset charger is an optional accessory available from your Sennheiser partner. The CH 10 allows you to charge additional D 10 series headsets, e.g. for sharing the same base station when working shifts.

Refer to the instruction manual of the CH 10 for more information.

**Charging several headsets simultaneously**
The MCH 7 multi USB power source is an optional accessory available from your Sennheiser partner. Together with the CH 10 USB, the MCH 7 allows you to charge up to 7 headsets simultaneously.

Refer to the instruction manual of the MCH 7 for more information.
Switching the headset system off during extended non-use

You can switch off the headset system (1) or the headset (2) when not using the products for extended periods of time (e.g. when you are on holiday).

Switching the headset system off

1 Disconnect the base station from the mains power supply. The base station switches off immediately, the headset switches off about 30 minutes later.

2 Press and hold the Link button for 5 seconds to switch off the headset immediately. The Headset LED flashes red 3 times, the headset is switched off completely.

   The Link LED on the base station lights up red after a short time, the Charge status LED on the base station goes off.

Switching the headset system on and pairing the components

- Plug the power supply unit into a wall socket. The base station is switched on.

- Place the headset into the magnetic holder of the base station. The Headset LED flashes blue 3 times and then lights up blue. The base station and the headset are paired.
Sharing a workplace

The headsets and base stations of the D 10 series are compatible with each other. If, for example, you share a workplace with different headsets. The last headset paired with the base station can be used without more ado.

- Place the headset to be used into the magnetic holder of the base station.
  The Headset LED alternately flashes blue/red until the headset is successfully paired with the base station. The Headset LED flashes 3 times blue and then goes off. You can now use the newly paired headset.

If pairing has failed, the Link LED on the base station lights up red or is off. Repeat the procedure.

Using the headset with a third party base station (DECT-GAP telephone)

- Place the headset at a maximum distance of 1 m from the third party base station.
- Simultaneously press and hold the headset's Link button and Audio button for 5 seconds.
  The headset switches to a special pairing mode and the Headset LED alternately flashes blue/red.
- Set the third party base station to a special pairing mode (see the instruction manual of the third party base station). The default code for the headset is “0000”.
  The headset pairs with the third party base station. If pairing is successful, the Headset LED goes off.

If pairing is not successful within 60 seconds, the headset switches back to standby mode.

To pair the headset again with a D 10 series base station:

- Simultaneously press and hold the headset's Link button and Audio button for 5 seconds.
  The headset switches to a special pairing mode and the Headset LED alternately flashes blue/red.
- Place the headset into the magnetic holder of the base station. The Headset LED flashes blue 3 times and then lights up blue. The base station and the headset are paired.
Cleaning and maintaining the headset system

CAUTION
Liquids can damage the electronics of the product!
Liquids entering the housing of the product can short-circuit the electronics.
▷ Keep all liquids far away from the product.
▷ Do not use any solvents or cleansing agents.

▷ Before cleaning, disconnect the base station from the mains power supply.
▷ Only use a dry and soft cloth to clean the product.
▷ Clean the charging contacts of the base station and the charging contacts of the headset from time to time using e.g. a cotton swab.
Replacing the ear pads

For reasons of hygiene, you should replace the ear pads from time to time. Spare ear pads are available from your Sennheiser partner.

1  Carefully remove the old ear pad from the ear cup. Make sure that the fastening ring of the old ear pad is also removed from the ear cup.

2  Pull the collar B of the ear pad over the notch A of the headband.

3  Turn the ear pad counter-clockwise over the notch until the collar completely surrounds the ear cup.
Replacing the headset’s rechargeable battery

**CAUTION**

**Damage to the product due to improper handling**

The cables can be kinked or damaged if you open the battery compartment too jerkily.

- Carefully open the battery compartment and loosen the connector plug of the rechargeable battery.

Spare rechargeable batteries are available from your Sennheiser partner. Only use spare rechargeable batteries recommended by Sennheiser.

1. Remove the ear hook or the headband (see page 14) and open the battery compartment.

2. Carefully move the battery compartment cover in the direction of the arrow until you overcome a slight resistance. Remove the rechargeable battery and carefully loosen the connector plug of it.

3. Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.

4. Close the battery compartment.

Manufacturer Declarations

Warranty
Sennheiser Communications A/S gives a warranty of 24 months on this product. For the current warranty conditions, please visit our website at www.sennheiser.com or contact your Sennheiser partner.

In compliance with the following requirements
• WEEE Directive (2012/19/EU)
  Please dispose of this product by taking it to your local collection point or recycling center for such equipment. This will help to protect the environment in which we all live.
• Battery Directive (2013/56/EU)
  The product’s built-in rechargeable batteries can be recycled. In order to protect the environment, please dispose of defective products with their rechargeable batteries as special waste or return them to your specialist dealer.

CE Conformity

CEPT 1321
• R&TTE Directive (1999/5/EC)
• EMC Directive (2014/30/EU)
• Low Voltage Directive (2014/35/EU)
• ErP Directive (2009/125/EC)
• RoHS Directive (2011/65/EU)
The declaration is available at www.sennheiser.com.
Before putting the product into operation, please observe the respective country-specific regulations!
Statement regarding FCC

This equipment has been tested and found to comply with the limits for a Class B digital device of the FCC Rules, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications made to this equipment not expressly approved by Sennheiser electronic Corp. may void the FCC authorization to operate this equipment.

The headset D 10 HS complies with FCC RF radiation exposure limits for devices used by the general public. It has been tested for SAR and has complied with Industry Canada SAR limits for devices used by the general public.

Statement regarding Industry Canada

This device complies with RSS-213 Issue 2 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The headset D 10 HS complies with Industry Canada RF radiation exposure limits for devices used by the general public. It has been tested for SAR and has complied with Industry Canada SAR limits for devices used by the general public.

Trademarks
