

## **Designer Cut Series- AcousticPro 1080P3**

*Acoustically Transparent Projection Material*

### **Care & Use**

Proper care and use of the **AcousticPro1080P3** will maximize the life of the material to bring you years of enjoyment.

#### **Projection Side**

The AcousticPro1080P3 material has a very similar look on both sides. Please take note of the label on the material. It will be labeled front or projection side. If the label happens to not be found, you can identify the front side by the matte side. The back side will appear a bit shinny.

#### **Material Maintenance**

Wrinkles/Creases:

The material may have minor wrinkles which will get removed after stretching it tightly over a frame or a mounting system that allows tensioning. You can also use a handheld fabric steamer to remove wrinkles or creases.

Dust/Dirt:

A feather duster should be used to remove loose dirt or dust. Use warm water with a toothbrush to clean dirt or dust spots. Do not use soap as it will stain the material.

#### **Quick Tip**

For best picture quality results, maintain a minimum viewing distance if possible 1.5 times the width of your projection image.
