

CELVIN® NAS

Congratulations on your purchase of an innovative product from Fujitsu.

Latest information about our products, tips, updates etc. can be found on the Internet at:
<http://www.fujitsu.com/fts/>

For driver updates, please go to: *<http://support.ts.fujitsu.com/download>*

Should you have any technical questions, please contact:

- our Hotline/Service Desk (see Service Desk list or visit:
<http://support.ts.fujitsu.com/contact/servicedesk>)
- your sales partner
- your sales office

We hope you enjoy working with your new Fujitsu system!

Your CELVIN® NAS...

Thank you for purchasing a CELVIN® NAS! These operating instructions provide detailed information on the use of this product. Please read the instructions carefully to enjoy the full benefit of the powerful functions offered by the CELVIN® NAS!

Safety notes

- The NAS can operate normally in temperatures of 0 to 40 °C and at a relative humidity from 0 to 95 %. Please make sure that the environment is well-ventilated.
- The power cord and devices connected to the NAS must be connected to a suitable power source (90 to 264 V, 100W)
- Do not place the NAS in direct sunlight or near chemicals. Make sure that the temperature and humidity of the environment are within the permitted ranges.
- Unplug the power cord and separate all connected cables before cleaning the device. Wipe the device with a dry towel. Do not use a chemical cleaning agent or aerosol to clean your NAS.
- Do not place any objects on top of the NAS for the server's normal operation and to avoid overheating.
- When installing a hard disk in the NAS, use the flat head screws in the product package to fit the hard disk in the NAS.
- Do not place the NAS near any liquid.
- Do not place the NAS on any uneven surface to avoid falling off and damage.
- Make sure the voltage is correct in the location where the NAS is installed. If you are uncertain, contact the distributor or the local power supply company for information.
- Do not place any objects on the power cord.
- Never try to repair your NAS yourself. Improper disassembly of the product may expose users to electric shock or other risks. For any enquiries, please contact the distributor.

CE marking

CE marking for devices without wireless component supplied at launch from 20 July 2007

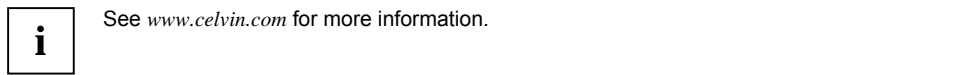

The device complies with the requirements of the EC directives 2004/108/EC "Electromagnetic compatibility", 2006/95/EC "Low voltage directive" and 2009/125/EC "Ecodesign directive".

The CELVIN® NAS will subsequently also be referred to by the short names NAS, Q805 (model with 4 hard disks) or Q905 (model with 6 hard disks).

Back up your system regularly to avoid any potential data loss. Fujitsu Technology Solutions will not accept responsibility for the loss of or the recovery of any data in any form.

If the device complies with the FCC regulations, the FCC sign can be found on the type rating plate.

DOC (INDUSTRY CANADA) NOTICES

This class B digital apparatus complies with Canadian ICES-003.

NOTE:

4
Fujitsu

equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Fujitsu not responsible for any radio or television interference caused by unauthorized modifications of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by Fujitsu. The correction of interferences caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

The use of shielded I/O cables is required when connecting this equipment to any and all optional peripheral or host devices. Failure to do so may violate FCC and ICES rules.

FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

The transmitters in this device must not be co-located or operated in conjunction with any other antenna or transmitter.

To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.

Users are not authorized to modify this product. Any modifications invalidate the warranty. This equipment may not be modified, altered, or changed in any way without signed written permission from Fujitsu. Unauthorized modification will void the equipment authorization from the FCC and Industry Canada and the warranty.

Hardware overview

CELVIN® NAS Q805

- 5 = 2 x USB 2.0
- 6 = 4 x Gigabit LAN
- 7 = Kensington security slot

Installing the NAS

For information on hard disk installation and initial operation, please refer to the "Quick Start Guide".

To install the NAS, proceed as follows:

- ▶ Switch on the NAS.
- ▶ Connect the NAS to the same network as your PC.

To make sure that the NAS works correctly, pay attention to LEDs and alarm buzzer sounds during installation.

See "System status checks" for more information.

List of recommended hard disks

This product will work with 2,5/3,5 inch SATA hard disks from major hard disk manufacturers. A list of compatible drives can be found at <http://support.ts.fujitsu.com>.

Fujitsu Technology Solutions will accept no liability whatsoever for any product defects/faulty operation, and/or any time and costs associated with data loss/data recovery, insofar as the cause can be attributed to misuse or improper installation of hard disks, regardless of the circumstances or for whatever reason.

Please note that when installing a hard disk (new or used) which has not previously been installed on the NAS, the hard disk will first be formatted and sub-divided automatically, and all disk data will be lost.

System ventilation

Please ensure when setting up the device that sufficient ventilation will be available at all times. The air inlet on the underside of the product must not be covered, as otherwise it is not possible to guarantee that the system will receive sufficient ventilation, which may lead to the product being damaged.

System status checks

The NAS is fitted with LED indicators to show the system status and further information. When the NAS is switched on, check the following items to make sure that the system is working normally. Please note that the information provided by the LEDs described below is only valid if the hard disks have been correctly installed and the NAS is connected to the network and the power supply.

The following illustration shows the CELVIN® NAS Q905. The status indicators, other than the power supply status indicator, are identical for both device variants.

- 1 = System-Status
- 2 = USB
- 3 = LAN
- 4 = HDD 1 - 4 (Q805)
HDD 1 - 6 (Q905)

LED Display & System Status Overview

LED	Colour	LED-Status	Description
System Status	Red / Green	Flashes green and red alternately every 0.5 sec	<ul style="list-style-type: none"> The hard disk drive on the NAS is being formatted. The NAS is being initialized. The system firmware is being updated. RAID rebuilding is in process. Online RAID capacity expansion is in process. Online RAID level migration is in process.
		Red	<ul style="list-style-type: none"> The hard disk drive is invalid. The disk volume has reached its full capacity. The disk volume is going to be full. The system fan is out of function. An error occurs when accessing (read/write) the disk data. A bad sector is detected on the hard disk drive. The NAS is in degraded read-only mode (2 member hard drives fail in a RAID 5 or RAID 6 configuration, the disk data can still be read). (Hardware self-test error).
		Flashes red every 0.5 sec	The NAS is in degraded mode (one member hard drive fails in RAID 1, RAID 5 or RAID 6 configuration).
		Flashes green every 0.5 sec	<ul style="list-style-type: none"> The NAS is starting up. The NAS is not configured. The hard disk drive is not formatted.
		Green	The NAS is ready.
		Off	All the hard disk drives on the NAS are in standby mode.
LAN	Orange	Orange	The NAS is connected to the network.
		Flashes orange	The NAS is being accessed from the network.
HDD	Red / Green	Flashes red	The disk data is being accessed and a read/write error occurs during the process.
		Red	A hard drive read/write error occurs.
		Flashes green	The disk data is being accessed.
		Green	The hard drive can be accessed.

LED Display & System Status Overview

LED	Colour	LED-Status	Description
USB	Blue	Flashes blue every 0.5 sec	<ul style="list-style-type: none"> A USB device (connected to front USB port) is being detected. A USB device (connected to front USB port) is being removed from the NAS. The USB device (connected to the front USB port) is being accessed. The data is being copied to or from the external USB or eSATA device.
		Blue	A front USB device is detected (after the device is mounted).
		Off	<ul style="list-style-type: none"> No USB device is detected. The NAS has finished copying the data to or from the USB device connected to the front USB port of the NAS.

Alarm Buzzer

The alarm buzzer can be disabled in *Control Panel - Hardware*.

The beep, which sounds when booting the device, cannot be deactivated.

Beep sound	No. of Times	Description
Short beep (0.5 sec)	1	<ul style="list-style-type: none"> The NAS is starting up. The NAS is being shut down (software shutdown). The user presses the reset button to reset the NAS. The system firmware has been updated.
Short beep (0.5 sec)	3	An attempt is being made to copy NAS data to an external storage device connected to the front USB port, but the data cannot be copied.
Short beep (0.5 sec) Long beep (1.5 sec)	3, every 5 min.	The system fan is out of function.

Beep sound	No. of Times	Description
Long beep (1.5 sec)	2	<ul style="list-style-type: none">• The disk volume is going to be full.• The disk volume has reached its full capacity.• The hard disk drives on the NAS are in degraded mode.• The user starts hard drive rebuilding.
	1	<ul style="list-style-type: none">• The NAS is turned off by force shutdown (hardware shutdown).• The NAS has been turned on and is ready.

Use the LCD Panel

You can use the LCD panel to perform disk configuration and view the system information.
When the NAS has started up, you will be able to view the NAS name and IP address:

N	A	S	5	F	4	D	E	3							
1	6	9	.	2	5	4	.	1	0	0	.	1	0	0	

For the first time installation, the LCD panel shows the number of hard drives detected and the IP address. You may select to configure the hard drives.

Number of hard drives detected	Default disk configuration	Available disk configuration options
1	Single	Single
2	RAID 1	Single → JBOD → RAID 0 → RAID 1
3	RAID 5	Single → JBOD → RAID 0 → RAID 5
4 or above	RAID 5	Single → JBOD → RAID 0 → RAID 5 → RAID 6 → RAID 10

i

Press the Select button to choose the option.

Press the Enter button to confirm.

For example, when you switch on the NAS with 5 hard disks installed, the following message is displayed on the LCD panel:

C	o	n	f	i	g	.	D	i	s	k	s	?			
→	R	A	I	D	5										

Use the Select button to select further options, e.g. RAID 6.

Proceed as follows to select a standard drive configuration:

- Press Enter.

The following message is displayed:

C	h	o	o	s	e		R	A	I	D	5	?			
→	Y	e	s				N	o							

- Use the Select button to select *Yes*.
- Confirm your selection by pressing Enter.

When you execute RAID 1, RAID 5, RAID 6 or RAID 10 configuration, the system will initialize the hard drives, create the RAID device, format the RAID device, and mount it as a volume on the NAS. The progress will be shown on the LCD panel.

When it reaches 100 %, you can connect to the RAID volume, for example, create folders and upload files to the folders on the NAS.

In the meantime, to make sure the stripes and blocks in all the RAID component devices are ready, the NAS will execute RAID synchronization and the progress will be shown on *Disk Management - Volume Management* page. The synchronization rate is around 30-60 MB/s (varies depending on the hard drive models, system resource usage, etc.)

If a member drive of the RAID configuration is lost during synchronization, the RAID device will switch to a degraded mode. You can continue to access the drive data.

If you insert a new member drive in the device, the drive is restored. You can check the status on the *Volume Management* page.

If *Encrypt Volume?* is displayed on the LCD screen, select *Yes* if you wish to encrypt the data carrier. The default selection is "No".

The default encryption password is *admin*. To change the password, login the web-based administration interface of the NAS with an administrator account and change the settings in *Disk Management – Encrypted File System*.

E	n	c	r	y	p	t		V	O	L	U	M	E	?	
→	Y	e	s					N	o						

The data encryption functions may not be available in accordance to the legislative restrictions of some countries.

When the configuration is finished, the NAS name and IP address will be shown.

If the NAS fails to create the disk volume, the following message will be shown.

C	r	e	a	t	i	n	g	.	.	.						
R	A	I	D	5		F	a	i	l	e	d					

View system information by the LCD panel

When the LCD panel shows the NAS name and IP address, you may press the “Enter” button to enter the Main Menu. To do this, press and hold Enter for two seconds. The main menu consists of the following menu items:

1. TCP/IP
2. Physical disk
3. Volume
4. System
5. Shut down
6. Reboot
7. Password
8. Back

TCP/IP

Menu item *TCP/IP* contains the following options:

1. LAN IP Address
2. LAN Subnet Mask
3. LAN Gateway
4. LAN PRI. DNS
5. LAN SEC. DNS
6. Enter Network Settings
 - Network Settings – DHCP
 - Network Settings – Static IP
 - Network Settings – BACK
7. Back to Main Menu

In *System Administration - Network - TCP/IP*, you can configure the IP address, subnet mask, gateway, and DNS of LAN 1 and LAN 2.

Physical disk

Menu item *Physical disk* contains the following options:

- 1. Disk Info
- 2. Back to Main Menu

Disk Info shows the temperature and capacity of the hard disk.

D	i	s	k	:	1		T	e	m	p	:	5	0	°	C
S	i	z	e	:		2	3	2		G	B				

Volume

This menu item shows the drive configuration of the NAS. The first line shows the RAID configuration and the memory capacity. The second line shows the drive numbers of the drives involved in the configuration.

R	A	I	D	5						7	5	0	G	B
D	r	i	v	e		1	2	3	4					

If there is more than one volume, press the Select button to view the information. The following table shows the description of the LCD messages for RAID 5 configuration.

LCD Display	Drive configuration
RAID5+S	RAID5+spare
RAID5 (D)	RAID 5 degraded mode
RAID 5 (B)	RAID 5 rebuilding
RAID 5 (S)	RAID 5 re-synchronizing
RAID 5 (U)	RAID 5 is unmounted
RAID 5 (X)	RAID 5 non-activated

System

This menu item shows the system temperature and the rotation speed of the system fan.

C	P	U		T	e	m	p	:		5	0	°	C		
S	y	s		T	e	m	p	:		5	5	°	C		

S	y	s		F	a	n	:	8	6	5	R	P	M		

Shut down

Use this option to turn off the NAS.

- ▶ Press the Select button to select *Yes*.
- ▶ Then press the Enter button to confirm.

Reboot

Use this option to restart the NAS.

- ▶ Press the Select button to select *Yes*.
- ▶ Then press the Enter button to confirm.

Password

The default password of the LCD panel is blank. Enter this option to change the password of the LCD panel.

- ▶ Select *Yes* to continue.

You may enter a password of maximum 8 numeric characters (0-9).

- ▶ When the cursor moves to *OK*, press the Enter button.
- ▶ Verify the password to confirm the changes.

Back

Select this option to return to the main menu.

System Messages

If an NAS system error occurs, a corresponding error message is displayed in the LCD panel.

To display an error message, press Enter.

To display the next error message, press Enter again.

System Message	Description
Sys. Fan Failed	The system fan fails.
Sys. Overheat	The system overheats.
HDD Overheat	A hard drive overheats.
CPU Overheat	The CPU overheats.
Network Lost	Both LAN 1 and LAN 2 are disconnected in failover or load balancing mode.
LAN1 Lost	LAN 1 is disconnected.
LAN2 Lost	LAN 2 is disconnected.
HDD Failure	A hard drive fails.
Vol1 Full	The disk volume is full.
HDD Ejected	A hard drive is ejected.
Vol1 Degraded	The disk volume is in degraded mode.
Vol1 Unmounted	The disk volume is unmounted.
Vol1 Nonactivate	The disk volume is inactive.

Configuring software settings

- ▶ Run the product CD.
- ▶ Select the *Utilities menu*.
- ▶ Select the appropriate NAS model to continue.
- ▶ Click on *Search*.

Displays the available programs.

Fujitsu Finder

Version: **4.2.0 - 0704** Hersteller: **Fujitsu Technology Solutions**
Kategorie: **Utilities** ID: **1127646**

- ▶ To start the installation, click on the corresponding symbol in *Fujitsu Finder*.
- ▶ Follow the on-screen instructions to install *Fujitsu Finder*. *Fujitsu Finder* will then run automatically.

If you are using Windows XP SP2 / SP3 or Windows Vista, the following window will be displayed:

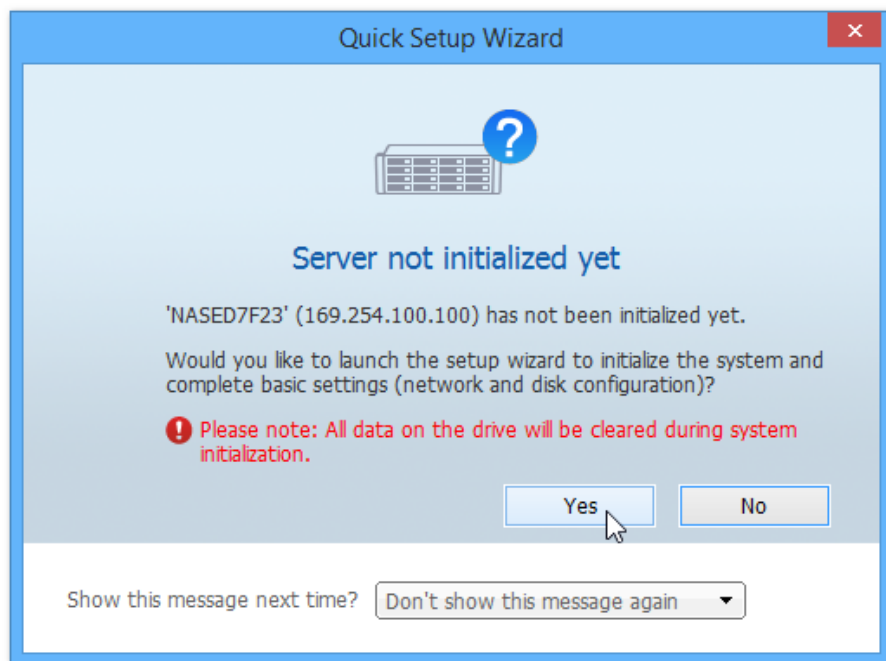

- ▶ Select *Unblock*.

If you are using Windows 7/8, the following window will be displayed:

- ▶ Set a checkmark against *Private networks, such as my home or work network*.
- ▶ Click on *Allow access*.

Fujitsu Finder detects the NAS on the network and if necessary asks whether Quick Setup should be run.

- ▶ Click on *Yes* to continue.

If the NAS could not be found, please click on *Refresh* to retry.
Check that you have installed a hard disk in the NAS.

If you have already set up the NAS via the LCD panel, you do not have to perform the following steps of the Quick Setup.

Note that during NAS set up, the installed hard disk will be formatted and all the data on it will be lost.

The first page of the Quick Setup Wizard will be displayed.

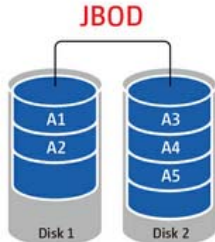

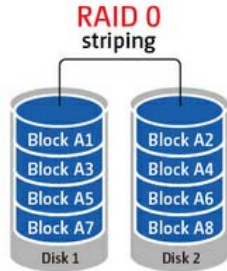

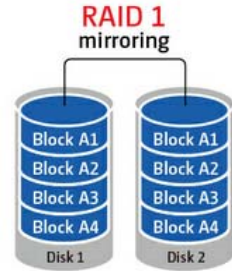

- ▶ Select whether you want to use the NAS for private or business purposes.
- ▶ Click on *start intelligent installation guide* to begin initial configuration.

The configuration process may take up to twenty minutes if the hard disk used has a capacity larger than 1 TB.

- ▶ Follow the instructions for initial configuration.

► Select the desired drive configuration for the NAS:

Configuration	Description
Single Disk Volume	Each hard drive is used as a standalone disk. If a hard drive is damaged, all the data will be lost.
JBOD (Just a bunch of disks) 	JBOD is a collection of hard drive that does not offer any RAID protection. The data are written to the physical disks sequentially. The total storage capacity is equal to the sum of the capacity of all member hard drives.
RAID 0 Striping Disk Volume 	RAID 0 (striping disk) combines 2 or more hard drives into one larger volume. The data is written to the hard drive without any parity information and no redundancy is offered. The total storage capacity of a RAID 0 disk volume is equal to the sum of the capacity of all member hard drives.
RAID 1 Mirroring Disk Volume 	RAID 1 duplicates the data between two hard drives to provide disk mirroring. To create a RAID 1 array, a minimum of 2 hard drives are required. The storage capacity of a RAID 1 disk volume is equal to the size of the smallest hard drive.

RAID 5 Disk Volume

The data are striped across all the hard drives in a RAID 5 array. The parity information is distributed and stored across each hard drive. If a member hard drive fails, the array enters degraded mode. After installing a new hard drive to replace the failed one, the data can be rebuilt from other member drives that contain the parity information.

To create a RAID 5 disk volume, a minimum of 3 hard drives are required. The storage capacity of a RAID 5 array is equal to $(N-1)$ (size of smallest hard drive). N is the number of hard drives in the array.

RAID 6 Disk Volume

The data are striped across all the hard drives in a RAID 6 array. RAID 6 differs from RAID 5 that a second set of parity information is stored across the member drives in the array. It tolerates failure of two hard drives.

To create a RAID 6 disk volume, a minimum of 4 hard drives are required. The storage capacity of a RAID 6 array is equal to $(N-2)$ (size of smallest hard drive). N is the number of hard drives in the array.

RAID 10 Disk Volume

RAID 10 combines four or more disks in a way that protects data against loss of non-adjacent disks. It provides security by mirroring all data on a secondary set of disks while using striping across each set of disks to speed up data transfers.

RAID 10 requires an even number of hard drives (minimum 4 hard drives). The storage capacity of RAID 10 disk volume is equal to (size of the smallest capacity disk in the array) $N/2$. N is the number of hard drives in the volume.

RAID 10 tolerates failure of only two disks from two different sets of disks.

- Select the desired *File System*.
- Click on *Next* and then on *Start Installation*.

Connecting a network drive

- ▶ Start *Fujitsu Finder*.

- ▶ Open the menu *Tools - Map Network Drive*.

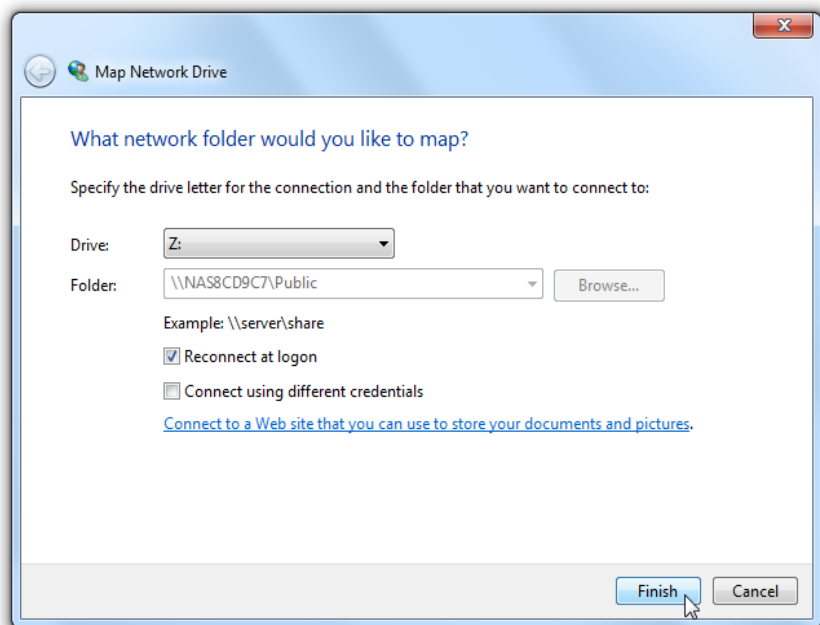

The NAS offers several standard network shares.

- ▶ Select the network share that should be mapped as a network drive and click on *Network Share*.

Download, Multimedia, USB and Web are standard network shares for using *Download Station, Multimedia Station, external USB storage devices* (automatic copy function), or *Web Server*. *Recordings* is the standard network share for using the *Surveillance Station*.

- ▶ Enter the default user name and password.
 - Standard user name: *admin*
 - Default password: *admin*

- Select the drive letter to be used for the connection and click on *Finish*.

- Once a connection has been successfully established, the network share will become available for use as a local data carrier in Windows Explorer.

Connecting to the NAS

Using the public folder (public network share)

The NAS public folder can be accessed in the following ways:

- ▶ Open Network Neighborhood and locate the NAS workgroup.
- ▶ If the server cannot be found, then please search the whole network for the NAS.
- ▶ Double click the name of the NAS to establish a connection.

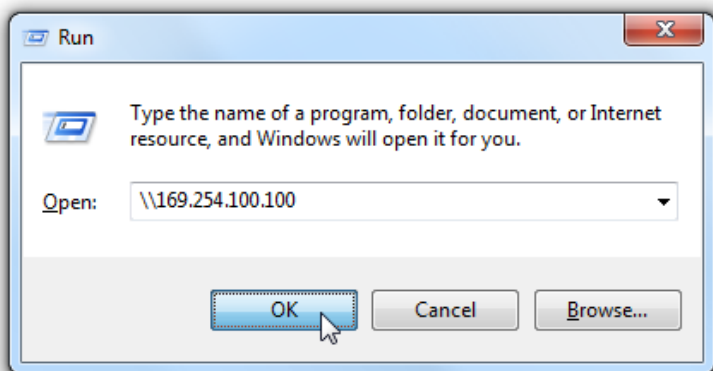

Alternatively:

- ▶ Click on *Start - Run* or keep the Windows key on your keyboard pressed and press the **R** key.
- ▶ Enter `\\[NAS name]` or `\\[NAS IP]` to access the shared folders on the NAS.

The placeholders *[NAS name]* and *[NAS IP]* represent the name or IP address of your NAS. You can use the *Fujitsu Finder* to obtain this information.

- ▶ Please enter your user name and password.
 - Default user name: admin
 - Default password: admin

Files can be uploaded to the network shares.

Administering the NAS via a Web browser under Windows

The NAS Web administration page can be accessed by the following methods:

- ▶ Find the NAS via the Connect *Fujitsu Finder* and click on *Connect*.
- ▶ Open a web browser and enter *http://[NAS IP]:8080*.

The default NAS IP is 169.254.100.100:8080. If the NAS has been configured to use DHCP, then the *Fujitsu Finder* can be used to check the IP address of the NAS. Make sure that the NAS is connected to the same subnet as the computer that is running *Fujitsu Finder*. If it is not possible to search for the IP address of the NAS, please try connecting the NAS directly to the computer and restarting the *Fujitsu Finder*.

- ▶ Enter the user name and password to log in.
 - Default user name: admin
 - Default password: admin

The NAS supports encrypted SSL login. This allows the server to be configured and managed over an encrypted data link.

- ▶ To use this function, check the *Secure Login* option on the administration page before logging in to the server.

If the NAS is situated behind a NAT gateway and it is necessary to allow access to the NAS using secure login over the Internet, then Port 443 must be open on the NAT and mapped to the LAN IP of the NAS.

Administration user interface

After completing the initial set-up for the NAS and logging in, the Administration user interface appears.

1 = Desktop area with various applications

2 = Control Panel

3 = Main menu

4 = Show desktop

5 = Taskbar

6 = Background tasks

7 = External devices

8 = Messages and warnings

9 = Personal settings

10 = Restart, shutdown, logout

11 = Search

12 = Help

13 = Language

14 = Display

15 = Next desktop

16 = Control centre

To display the administration user interface, a screen resolution of at least 1024 x 768 is recommended.

Opening the main menu

The main menu will appear.

The main menu consists of three parts:

Applications

The sub-items enable access to NAS extensions that are provided and maintained by QNAP Systems, Inc.

System settings

The sub-items enable access to the NAS main function settings.

Third-party provider applications

The annexe contains a list of applications that have been created and submitted by independent developers and approved by QNAP Systems, Inc. These applications can be installed via the App Center.

Please understand that Fujitsu cannot be held liable for the content, functionality and security of these applications in any way. In the event of problems with these applications, please contact the relevant developer directly.

Control Panel / Opening applications

- Click on Control Panel or one of the applications.

A new window opens inside the desktop area.

When you open a third-party provider application, a new browser window will open instead of a window inside the desktop area

- Click on the Help button in the top right corner of the window for more information on the relevant menu or application.
- Click on to minimise a window. You can then access it again later from the taskbar.
- Click on to maximise a window.
- Click on to close a window.

Accessing the NAS from Linux

In addition to operating systems from Microsoft, the NAS also supports Linux systems using the NFS service.

- ▶ In Linux, run the following command: `mount -t nfs <NAS IP address>:/<Network Share Name> <Directory to Mount>`
- ▶ For example, if the IP address of the NAS is 169.254.100.100 and the link to the network share folder "public" should be created in the /mnt/pub directory, use the following command:
`mount -t nfs 169.254.100.100 :/public /mnt/pub`

The above command can only be executed when logged in as "root".

- ▶ Log in with the user name specified previously. The network share folder can be accessed via the mounted directory.

Copying data using the front USB port

Data can be copied directly from an external drive to the NAS or vice versa by pressing the one-touch copy button on the front of the device. To use this function, follow the steps below:

- ▶ Make sure a hard disk has been installed and formatted in the NAS. This will create the USB standard network share.
- ▶ Switch on the NAS.
- ▶ Configure the function of the one-touch copy button on the page *Backup - USB One Touch Copy*.
- ▶ Connect the USB drive (e.g. digital camera or flash drive) to the front USB port on the NAS.
- ▶ Press the one-touch copy button. Data will be copied to the NAS according to the previously defined settings.

Q805

- 1 = One-touch copy button
2 = USB 3.0

Q905

1 = One-touch copy button

2 = USB 3.0

This function performs an incremental backup. After the first time data backup, the NAS only copies the files that have changed since the last backup.

If there are several partitions on the source storage device, a new folder for each partition is created on the target device as a backup folder. The backup folder is named after the backup date and partition number, YYYYMMDD-1 at partition 1, YYYYMMDD-2 at partition 2, etc. If the source storage device only contains one partition, the backup folder is simply named YYYYMMDD.

Files are copied from the source to the target. Extra files at the target are deleted; files with the same name are overwritten by the source. The source data remains unchanged.

Web Server

The NAS can be used to upload web pages, with the Web Server function providing a convenient way to manage a website. Interactive websites using Joomla!, PHP, and SQLite are also supported.

- ▶ Activate the Web Server function and enter the port number in *Control Panel – Applications - Web Server*.
- ▶ Web pages can be uploaded to the web folder using the following methods:
 - Using Samba: Open a web browser and enter `\\[NAS IP]\\Web` or `\\[NAS Name]\\Web`. Log in to the folder and upload the web pages.
 - By FTP: Log in to the FTP service and upload the web pages to the folder.
 - Using Web File Manager: Log in to the Web File Manager and upload the web pages to the folder.

The file `index.html`, `index.htm`, or `index.php` will be the home page of the website.

- ▶ Click the `http://[NAS IP]/` link on the Web Server page to access the web pages that were uploaded. Note that when Web Server is enabled, it is necessary to type `http://[NAS IP]:8080/` into the web browser to access the login page for the NAS.

MySQL administration

As a MySQL administration tool, it is recommended that you install the phpMyAdmin plugin from the App Center. When the firmware is updated in future, phpMyAdmin will not be re-installed and none of the data in the database will be overwritten or changed.

The phpMyAdmin program files are created in the Qweb share folders. It is possible to change the folder names and to access the database by entering the URL in the browser. The link on the Web management interface will not change however.

The default user name for MySQL is "root". The password is "admin". Please change the root password immediately after logging in through the phpMyAdmin administration interface.

SQLite administration

The SQLiteManager is a multilingual, web-based tool for the administration of SQLite databases. You can download it at <http://www.sqlitemanager.org/>.

Please follow the steps below or refer to the INSTALL file in the SQLiteManager-*.tar.gz download to install SQLiteManager.

- ▶ Extract the SQLiteManager-*.tar.gz download file.
- ▶ Upload the extracted SQLiteManager-* folder to `\\[NAS IP]\Web\`.
- ▶ Open a web browser and go to [http://\[NAS IP\]/SQLiteManager-*1](http://[NAS IP]/SQLiteManager-*1).

The "*" symbol refers to the version number of SQLiteManager.

FTP server

The NAS supports the FTP service. To use the FTP service, enable this function in *Network Services* and follow the steps below:

- ▶ Open Internet Explorer and enter *ftp://[NAS IP]* or *ftp://[NAS Name]*.

It is essential that secure passwords are used when using the FTP server. A secure password contains numbers, letters and special characters.

Using the synchronisation software Qsync

Getting started

Qsync is a cloud-based file synchronisation service enabled by CELVIN NAS. If you add files to your local *Qsync* folder, these files are available on your CELVIN NAS and all devices connected with it.

Requirements for the use of Qsync

- ▶ Ensure that the network service *Qsync* is activated on your NAS.
- ▶ Create NAS user accounts.
- ▶ Install the *Qsync* utility on your computer.
- ▶ Install *CELVIN NAS Explorer* on your mobile device.
- ▶ Log on on the NAS from your computer or mobile device (*Qsync* Clients).

Create a user account on the NAS

- ▶ To create a user account for *Qsync* users, proceed as follows:

As a NAS administrator:

- ▶ Create a user account in the administration area of the NAS under *Control Panel - Privileges - User - Create user account*.

Every NAS user account is automatically a *Qsync* user account.

As a NAS user:

- ▶ Contact your system administrator so that they can create an account for you.

Install Qsync utility

The *Qsync* utility synchronises all selected data on your computers and mobile devices.

Installation on computers:

- ▶ Install the *Qsync* utility with the product CD.

Or

- ▶ Download the *Qsync* utility from the Fujitsu website at <http://www.fujitsu.com/fts/download>

Installation on iOS mobile devices:

- ▶ Search for "CELVIN NAS Explorer" in the App Store.
- ▶ Install the app.

On Android devices:

- ▶ Search for "CELVIN NAS Explorer" in Google Play.
- ▶ Install the app.

Log on at NAS

- ▶ Enter User ID and password after installing the utility.
- ▶ Click on *Search* within the LAN environment to localise the NAS.

Or

- ▶ Please enter an IP address or a name.

Example of an IP address: 10.8.1.20 or 192.168.1.100

The selected NAS is set as the *Qsync* server.

If the NAS ports have been changed, append the port number to the IP address. Otherwise enter only one IP address (standard port number: 8080).

Start using Qsync

- ▶ To open the local *Qsync* folder, double click on the *Qsync* shortcut on the desktop.

- ▶ Click on the *Qsync* symbol in the task bar to show the menu.

- ▶ Copy or drag your files into the local *Qsync* folder.

The files are copied to your other devices which you use *Qsync* with. This means that you no longer have to copy files between your computer and external devices. Furthermore, the size of files as email attachments is no longer problematic.

Synchronisation

Qsync automatically synchronises your files. Files on your computers or mobile devices are synchronised with each other, along with the *Qsync* folder files on the NAS.

On the computer:

- ▶ Drag and drop the files directly onto the local *Qsync* folder.

On mobile devices (*CELVIN NAS Explorer*):

- ▶ Copy and drag files into the *Qsync* folder.

On NAS (web-based file explorer):

- ▶ Copy and drag the files via *File Station*.

In the case of the web-based file explorer it is also possible to drag and drop files into the *Qsync* folder.

Qsync can transfer files with a size of maximum 50 GB in a LAN (Local Area Network).

Qsync does not support access via SAMBA, FTP or AFP. Access files via *File Station* or *Qsync*.

The app *CELVIN NAS Explorer* is only able to synchronise the file list and does not download the files onto a mobile device. If you need the files, you must download them.

Offline editing

You can search through and edit your files offline. As soon as your device is online, *Qsync* automatically synchronises the files edited offline.

If a file edited offline has been edited from another device or by another user in the meantime, an additional conflict file is created during synchronisation.

File sharing via download links

By sending file download links, you can share files in the *Qsync* folder with people who haven't installed *Qsync*.

On the computer:

- ▶ Right click on the file you would like to share.
- ▶ Click on *Qsync - share link*.
- ▶ Click on *Send* if you would like to send the link via email or copy the link.
- ▶ Click on *Settings*, to set further options for the link such as expiry date, password or the creation of an SSL link.

On the NAS:

- ▶ Right click on the file you would like to share.
- ▶ Select *Share*.
- ▶ Click on *Send* if you would like to send the link via email or copy the link.
- ▶ Click on *Settings*, to set further options for the link such as expiry date, password or the creation of an SSL link.

On mobile devices:

- ▶ Click on the symbol in the right, upper page.
- ▶ Select *Share Download Link*.
- ▶ Select *Send via Email* if you would like to send the link via email.
- ▶ Select *Send via Text Message* you would like to send the link via text message.
- ▶ Select *Only Create Link* if you only want to create a link.
- ▶ Set further options for the link such as expiry date, password or the creation of an SSL link.

The file recipients can click on the link or add it to a web browser in order to download the file.

Share folder with a group

Folders can be shared with a group of users. If a member of the group shares files in the folder, other members can receive the files.

To share files with a group, proceed as follows:

Requirements:

- Every group member must have a NAS user account.
 - The *Qsync* utility must be installed on all of the group members' devices.
- ▶ Right click on the folder you would like to share.
 - ▶ Select *Share this folder as team folder*.
 - ▶ Select users from the list *local users* or *domain users*.

All group members receive an invitation to file sharing. Once they have accepted, group members can access the folder.

The folder only becomes a team folder after the invitations have been accepted.
Team folder users cannot share their access further.

Synchronisation manager

- ▶ Click on the *Qsync* symbol in the task bar in order to display the administration feature.

With the administration feature you can:

- Add files
- Control the synchronisation process
- View information on synchronisation and sharing
- Set preferences

Add files and view the synchronisation result on the NAS

- ▶ To add files, open the *Qsync* folder.
- ▶ To view the files via web browser, open *File station* (web-based file explorer).
- ▶ Search the files in the *Qsync* folder on the NAS.

Control synchronisation process

- ▶ To stop or continue synchronisation, click on the corresponding button.
- ▶ To rescan with *Qsync* and refresh the synchronisation list, click on *Synchronise with NAS now*.

Information on synchronisation and sharing

The following lists provide you with information on synchronisation and sharing:

- *Sharing & file update centre*:
 - *Sharing centre*: List of shared folders and files
 - *File update centre*: List of file and folder update log files
- *Recently modified files*:
 - List of recently modified files

Manage or track Qsync status via web browser

- ▶ To manage or track the status via web browser, log on on the NAS via a web browser.
- ▶ Click on the *Qsync* symbol in the main menu of the administration area.

Function	Information	Options
<i>Overview</i>	List of total number of online users	Offers links to install the <i>Qsync</i> utility and <i>File Station</i>
		De/activation of the <i>Qsync</i> utility (only for administrators)
<i>Users</i>	List with online user information	Manage <i>Qsync</i> users (only administrators)
<i>Devices</i>	List of statuses of connected devices	Allow or end device connection
	Computer name of the computer logged onto	
	Name of the device as a Qfile-Android or Qfile iPhone	
	When dragging or copying files: Name of the device as a <i>Qsync-File Station</i>	
<i>Event Logs</i>	List of user details	—
<i>Team folder</i>	List of team folder status Including shared folders and folders shared by other users	—
<i>Share file</i>	List via the status of sharing links	—

Using the QGet download software

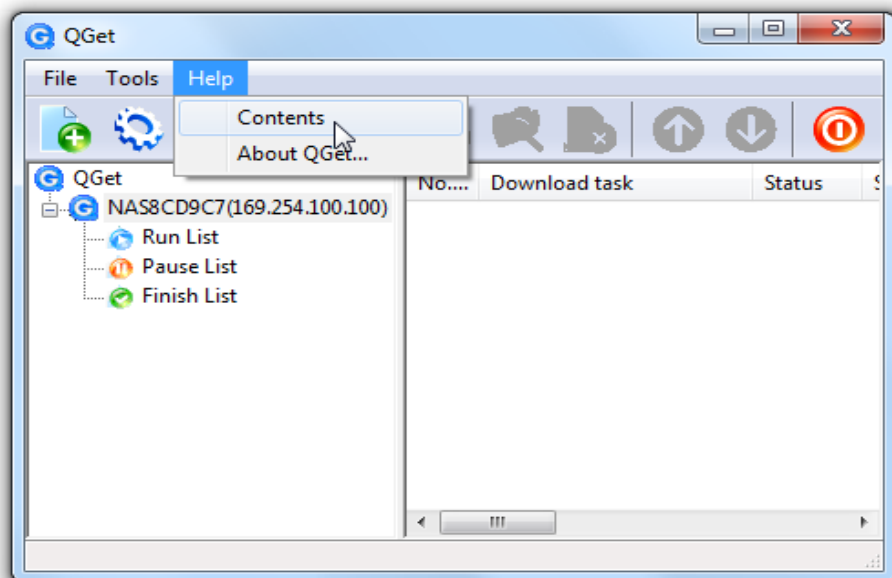

QGet is a powerful software tool for managing BT, HTTP and FTP download tasks on multiple NASs over LAN or WAN. QGet does away with the need to use the Web interface to log in to individual Download Stations on multiple servers separately to modify the settings one after the other. Simply install QGet on any Windows computer to manage the download tasks for all NASs in one place.

- ▶ To use QGet, install the software from the product CD-ROM.
- ▶ Follow the instructions to install QGet.

- ▶ Run QGet from the installed location.

For details on using QGet, please refer to the online help included with the software.

NetBak Replicator

NetBak Replicator is a powerful data backup program (Windows only). Selected files and folders from the local PC can be backed up in user-defined share folders on the NAS. Data is transferred via LAN or WLAN.

Installing NetBak Replicator

- ▶ Select *Install NetBak Replicator* from the menu on the NAS CD.
- ▶ Follow the on screen instructions to install the application.
- ▶ A shortcut icon will appear on the desktop upon successful completion of the installation process. Double click on this icon to launch NetBak Replicator.

Using NetBak Replicator

- ▶ Before using NetBak Replicator, please login to the NAS administration page and go to *Access Right Management - Share Folders* to create a share folder for backup purposes. Make sure the share folder is available for access by all users, or that you log in to the share folder with an authorized account or as administrator.

- ▶ Launch NetBak Replicator.
- ▶ For details on how to use the software, press **F1**.

Surveillance station

The *Surveillance Station Pro* offers real time video surveillance and recording of IP cameras on the local network or internet.

- ▶ The app can be downloaded via the "App Center" of the administration area. For this purpose, make sure that the NAS is connected to the internet.
- ▶ Activate the function under *Control Panel - Apps - Station Manager*.

You can find a list of compatible IP cameras at <http://www.fujitsu.com/fts/support/manuals>.

Prepare IP camera

- ▶ Create a plan of your home or office network before starting the surveillance system set-up.
- ▶ Check the following information:
 - The IP address of the NAS
 - The IP address of the camera
 - The IP address of the computer
 - The IP address of the router

Requirements:

- The NAS, the camera, your computer and the router are correctly connected to each other.
- Their IPs are on the same subnet.
- The IP camera is switched on and correctly set up.

Follow the descriptions in your IP camera manual for correct set-up.

In this example, the following installation is used:

- NAS IP: 192.168.1.60
- Camera IP: 192.168.1.10*
- Computer IP: 192.168.1.32
- Router IP: 192.168.1.100

- ▶ You can find out the IP address of your camera with Fujitsu Finder. Fujitsu Finder can be installed from the product CD which is enclosed with your NAS. A description of this is contained in the instructions.
- ▶ To find out the IP address of your camera open the menu *Tools - Search for network camera*.

Some IP cameras provide a special program for IP configuration. Further information can be found in the operating instructions of the camera.

Prepare USB webcam (optional)

If you want to use a USB webcam instead of an IP camera, you will need a camera with UVC (UVC Video Class) drivers.

Compatible webcams are listed at the following link:

- Linux UVC Webcam List: <http://www.ideasonboard.org/uvc>

The source mentioned above is for reference purposes only. Fujitsu cannot provide a guarantee for complete compatibility.

- ▶ Connect the USB webcam to the NAS USB port.
If the webcam is supported, it will be listed in an entry of the *system log* under *system settings-system logs*.

Surveillance station

- ▶ Install the app *QUSBCam* so that the USB webcam can be used with the NAS.
- ▶ For this, open the *Recommended* category in the App Center.
- ▶ Search for *QUSBCam*
- ▶ Click *Download*.

QUSBCam is installed.

- ▶ To configure settings click on *Open*.
- ▶ Log in with the user *admin* and the corresponding password (admin).

A maximum of two USB webcams can be used at the same time per NAS

Set up Surveillance Station

- ▶ To configure the IP cameras log on to Surveillance Station Pro via a web browser.
- ▶ Go to *Camera Settings - Camera Configuration*.
- ▶ Enter the IP camera information, e.g. name, model and IP address.
- ▶ If you are using a USB webcam, enter the following values:

Field	Values
Camera brand	<i>Generic model</i>
Camera model	<i>Generic JPEG</i>
HTTP URL	<i>/video0.cgi</i>
IP address	<i>localhost</i>
Port	<i>8168</i>
User name	<i>root (random entry)</i>
Password	<i>---- (random entry)</i>

- ▶ To check whether the IP address or USB webcam can be successfully connected, click on *Test*.
- ▶ If your IP camera supports audio recordings, you can switch on the option at *recorder settings*.
- ▶ Click “*Apply*” to save the changes.
- ▶ Configure the settings of Camera 2 following the above steps.
- ▶ After you have added the network cameras to the NAS, click on *Monitor*.
- ▶ If you are accessing this page for the first time with a web browser, you must install additional plug-ins to display the image.

You can now use the Surveillance Station monitoring and recording functions.

Further information e.g. on motion detection recording, schedule recording and video playback can be found in the software's online help.

Use further cameras

A maximum of two cameras (IP cameras and/or webcams) can be set up per NAS in its delivered condition.

If you want to use further cameras you can add further camera channels. QNAP® Systems, Inc provides this service.

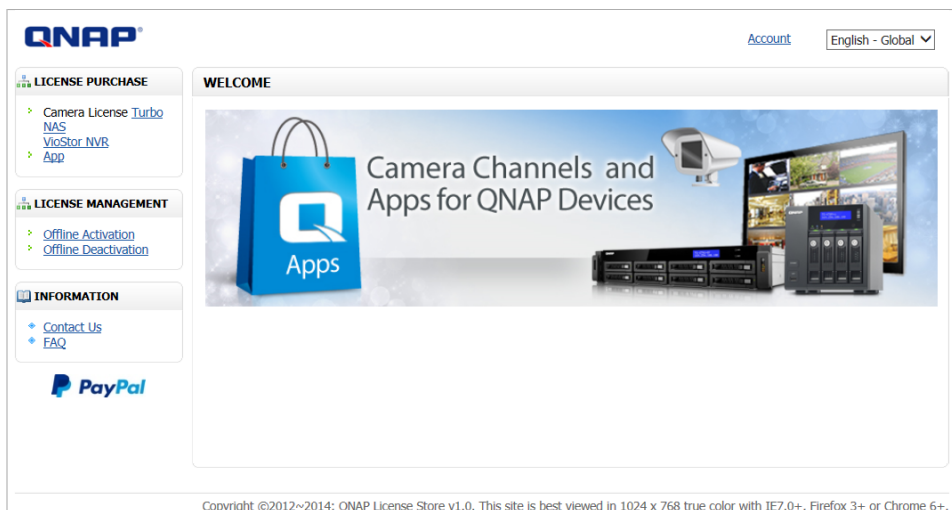

The licences for every further channel can be obtained from the QNAP® License Store at <http://www.license.qnap.com>

Fujitsu does not have any influence on the content of the QNAP® License Store. For this reason, the processes described in the following are only exemplary and may have since changed. By purchasing licenses via the QNAP® License Store you enter into an exclusive contractual relationship with QNAP® Systems, Inc.

Fujitsu does not assume any liability for the availability or quality of the licenses.

- ▶ Visit the QNAP® License Store.
- ▶ To create a new account or log in with an existing account, click on Account.

Two passwords are set at registration. The first one is for unpacking the license, the second is for logging into your account.

- ▶ After your account has been created, you will receive an email to confirm your account with.
- ▶ To activate your account, click on the link in the email.

After activating and logging onto the account:

- ▶ Click on Turbo NAS under *License Purchase* or *Categories*
- ▶ Select the number of licenses.

The licenses for NAS models TS-x53 are compatible with the CELVIN® NAS Surveillance Station.

- ▶ Click on *Checkout* and follow the further instructions on the website.
- ▶ If you click on *Continue* you are directed to PayPal®.

You can either pay via an existing PayPal® account or via direct debit or credit card.

- ▶ After selecting the payment type you are redirected back to the QNAP License Store.
- ▶ Click *Pay to confirm the payment*.

You will receive an Email with a compressed archive.

- ▶ To access the content of this archive you will need the password previously set to decompress it.
- ▶ Copy the Product Authorisation Key (PAK) from the text file.
- ▶ In the app, navigate to the field *PAK - License Manager - Install License*.
- ▶ Add the PAK to the field
- ▶ Make sure that the NAS is connected to the internet.

As soon as the camera licence is activated, you can set up the other cameras as described under "Set up Surveillance Station".

As soon as you have activated the PAK with your NAS, the PAK is connected with the hardware identification (UDI) of your NAS. You can then no longer use the same PAK for a different NAS.

If you have any problems related to the camera licenses or PAK, please contact QNAP® License Store Support: <https://license.qnap.com/ContactUs.html>

Firmware update

When updating the firmware, the mains power and network connection must not be disturbed. Do not switch the NAS off during a firmware update under any circumstances.

If the system is running properly, then there is no need to update the firmware.

Before updating the system firmware, make sure the product model and firmware version are correct. Follow the steps below to update the firmware:

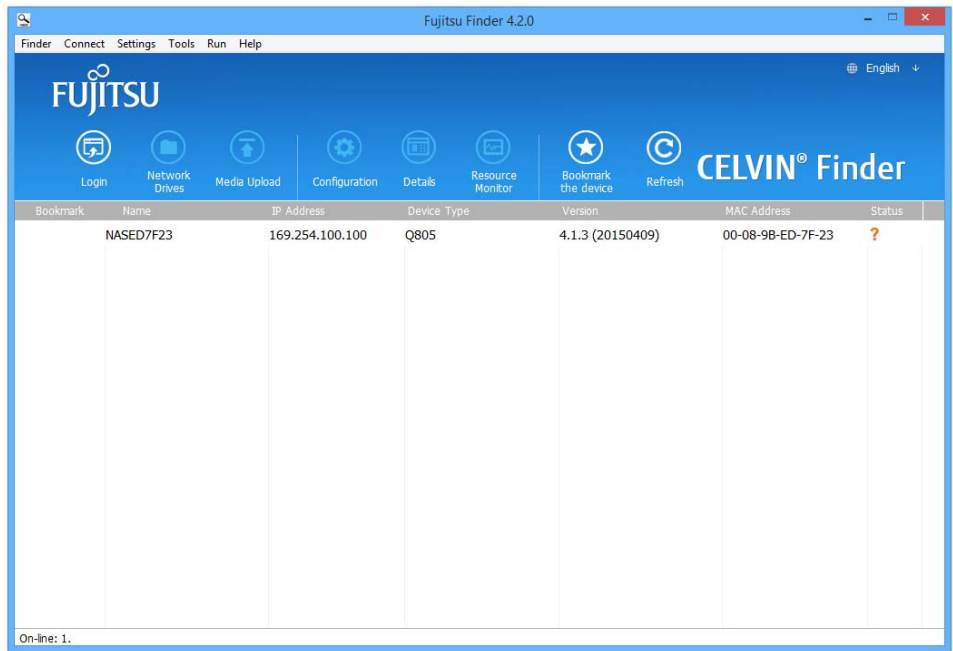

- ▶ Please visit <http://www.fujitsu.com/fts/support> and read the release notes for the new firmware version to check if it is necessary to update the firmware.
- ▶ Before updating the system firmware, back up all data stored on the hard disk to avoid any data being lost during the system update.
- ▶ Open the Administrator screen and select *Control Panel – Update Firmware – Update Firmware*.
- ▶ Click *Browse...* to select the new firmware image for the system update.
- ▶ Select the corresponding IMG file and then click on *Update system* to update the firmware.

The system update may take anywhere from a number of seconds to several minutes to complete, depending on the network connection status. Please be patient. The system will display a message when the system update is completed.

Updating the system firmware using Fujitsu Finder

The system firmware can be updated using *Fujitsu Finder*. Choose the NAS model and select *Update Firmware* from the Tools menu.

- ▶ Log on as an administrator.
- ▶ Browse to select the correct firmware for the NAS.
- ▶ Click *Start* to update the system.

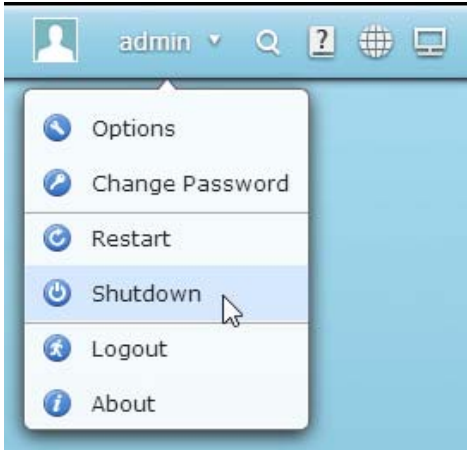

Fujitsu Finder can be used to update all servers of the same model on the same local network. Please note that this process requires administrator access to all the servers to be updated.

NAS maintenance

Shutting down/rebooting the server

Follow the steps below to shut down or reboot the server:

- ▶ Log into the NAS.
- ▶ Click on the user name you used to log in (e.g. "admin") in the upper right section of the screen.
- ▶ Click *Restart* to reboot the server.
- ▶ Select *Shutdown* to switch off the device.

You can force the shutdown if the server will not shut down in the normal way.

Forcing a shutdown may damage the file system and lead to data loss.

- ▶ To force a shutdown of the server, press and hold down the ON/OFF button for at least 10 seconds. The server will beep once and then shut down immediately.

The *Fujitsu Finder* can be used to restart or shut down the server (admin access required).

Resetting the administrator password and network settings

To reset the administrator password and NAS network settings, proceed as follows:

- ▶ Press and hold the Reset button on the NAS for 3 seconds. A beep will be heard. This will reset the following settings to their defaults:
 - System administration password: admin
 - TCP/IP configuration: Obtain IP address settings automatically via DHCP
 - TCP/IP configuration: Disable Jumbo Frame
 - TCP/IP configuration: If port trunking is enabled (dual LAN models only), the port trunking mode will be reset to "Active Backup (Failover)".
 - System Port: 8080 (system service port)
 - Security Level: Low (Allow all connections)
 - LCD panel password: (blank)
 - VLAN will be disabled

Advanced system reset (10 sec)

- ▶ Press and hold the Reset button for 10 seconds.

Two beeps sound (after the third and tenth seconds). The NAS will reset all the system settings to default as it does by web-based system reset in *Control Panel - System Settings - Backup / Restore - Restore to Factory Default* except all the data are reserved. The settings such as the users, user groups, and the network share folders previously created will be cleared. To retrieve the old data after the advanced system reset, create the same network share folders on the NAS and the data will be accessible again.

- ▶ Log in to the NAS with the default user name and password:
 - Default user name: **admin**
 - Password: **admin**

The *Enable configuration reset switch* option must be enabled in *Control Panel - System Settings - Hardware* in order to allow the system to be reset to defaults using the reset button.

Failure or malfunction of a hard disk

Please proceed as follows if a hard disk malfunctions or fails:

- ▶ Make a note of all unexpected behaviour and/or error messages to assist the technician.
- ▶ Stop using the NAS for any purpose and switch it off.
- ▶ Contact technical support.

The NAS must be repaired by a trained technician. Never try to repair the NAS yourself.

Power failure or abnormal shutdown

Following a power failure or improper shutdown of the NAS, when the system is restarted it should normally restore to the same state it was in before the shutdown or power failure. If the system does not function properly after the restart, please carry out the following steps:

- ▶ If the system configuration is lost due to the shut down or power failure, then reconfigure the system manually.
- ▶ In the event of abnormal operation of the system, or if error messages are displayed, contact customer services for technical support.

Abnormal system software behaviour

If the system software does not operate correctly, the NAS will automatically restart to restore normal operation. If the system restarts continuously, it may fail to resume normal operation. Please contact technical support immediately in such cases.

System temperature protection

When the system temperature exceeds 70 °C (158 °F), the system will shut down automatically to protect the hardware.

EuP mode configuration (for compliance with legal standby requirements)

The EU directive 2009/125/EC defines ecodesign requirements for energy-related products. In order to comply with this directive, the EuP mode needs to be activated.

► Activate EuP mode under *Control Panel - System Settings - Power*.

When EuP mode is enabled, the following settings will be affected so that the server maintains low power consumption (less than 0.5W) when the server is powered off:

- Wake on LAN: Disabled.
- AC power resumption: The server will remain off after the power restores from an outage.
- Schedule power on/ off/ restart settings: Disabled.

If EuP mode is deactivated, the power consumption of the server is greater than 0.5W when switched off. EuP is disabled by default so that you can use the functions Wake on LAN, AC power resumption, and power schedule settings properly.

Troubleshooting RAID operation errors

If the RAID configuration for the NAS is incorrect or error messages are displayed, please try the following solutions:

It is essential to back up all important data on the NAS first to mitigate any potential data loss.

Check the following to determine if the RAID rebuild has failed:

- LED: The Status LED on the NAS is flashing red.
- The *Control Panel - System Settings - Storage Manager* page is displaying the hard disk configuration status as *In degraded mode*.

► Establish which hard disk(s) caused the RAID rebuild failure:

- Go to the *Control Panel - System Settings - System Logs* page and search for the following error messages in order to establish which hard disk(s) caused the error.

Error occurred while accessing Drive **X**

Drive **X** has been removed

X refers to the number of the hard disk port.

Fault elimination

The drive rebuild will start when a new hard disk (e.g. HDD 1) is connected. If the drive configuration fails again due to a read/write error from the hard disk during the rebuild process, then please check which hard disk caused the error and then follow the steps below to rectify the problem.

Scenario 1: The error was caused by the last drive to be connected.

If the last drive to be connected (e.g. HDD 1) caused the rebuild error, then please disconnect HDD 1 and connect another new drive to start RAID rebuilding.

Scenario 2: The error was caused by an existing drive (e.g. HDD 2) in the RAID configuration.

If the RAID configuration is RAID 1, then carry out one of the following steps:

- Back up the data on the drive to another storage device. Once this is done, repeat the installation and setup of the NAS.
- Format the last drive to be connected (e.g. HDD 1) as a single drive. Next, back up the data on the NAS to this drive (HDD 1) using Web File Manager. Remove the faulty drive (e.g. HDD 2). Install a new drive in the NAS to replace the faulty drive. Finally, run the RAID 1 migration.

When connecting or removing a hard disk, please adhere strictly to the following rules to avoid causing a system operation fault or loss of data.

Only one drive at one time may be connected to or disconnected from the NAS.

After connecting or disconnecting a hard disk, wait for about ten seconds or longer until two beeps are heard. The next hard disk can then be connected/disconnected.

Hot-swap Hard Drives

Fujitsu Technology Solutions disclaims any responsibility for product damage/malfunction or data loss/recovery due to misuse or improper installation of hard disks in any occasions for any reasons.

Note that if a hard drive (new or used) which has never been installed on the NAS before is installed, the hard drive will be formatted and partitioned automatically and all the disk data will be cleared.

To prevent the risk of electric shock, switch the NAS off before replacing the hard disks.

The NAS supports hot-swapping the hard drives when 1 member drive crashes in RAID 1, 1-2 member drives crash in RAID 5 or RAID 6.

To replace a hard disk while the NAS is in operation, proceed as follows:

Prepare a new hard drive to replace the failed one.

The capacity of the new hard drive should be the same as or larger than the failed hard drive.

- ▶ Login the NAS.
- ▶ Check the disk volume configuration in *Storage Manager*.
- ▶ The drive is in *degraded mode*.
- ▶ Unplug the failed drive from the NAS.
- ▶ Wait until the server emits two beeps.
- ▶ Remove the failed drive from the drive tray.
- ▶ Install the new hard drive on the drive tray.
- ▶ Insert the slide-in module into the NAS.
- ▶ The server should beep 1.5 seconds twice.
- ▶ Check the volume status on the web administration page.

The drive now automatically runs the restore.

RAID Recovery

The CELVIN NAS supports exclusive RAID recovery technology to recover a failed RAID disk volume from unintentional disconnection or removal of the hard drives from the system. Using the RAID recovery, users can recover an inactive RAID 1, RAID 5, or RAID 6 volume to *degraded mode*, or an inactive RAID 0 and JBOD configuration to normal.

Disk volume	Supports RAID recovery	Maximum number of disk removal allowed
Single	No	-
JBOD	Yes	1 or more
RAID 0	Yes	1 or more
RAID 1	Yes	1 or 2
RAID 5	Yes	2 or more
RAID 6	Yes	3 or more
RAID 10	No	-

If the volume status is not active, users can install the same hard drives back to the same slots of the NAS.

- ▶ Select *Storage Manager - RAID Management - Recover*.
- ▶ Wait for about 60 seconds for the process to complete.

After the restore is completed, you can access your data again.

After recovering a RAID 1, RAID 5, or RAID 6 disk volume from *not active* to *degraded mode* by the RAID recovery, users can read or write the volume normally.

The volume status will be recovered to normal after synchronization.

If the disconnected drive member is damaged, the RAID recovery function will not work.

	CELVIN RAID 5	CELVIN RAID 6
Degraded mode	N-1	N-1 & N-2
Read only protection (for immediate data backup & hard drive replacement)	N-1, bad blocks found in the surviving drives of the array.	N-2, bad blocks found in the surviving drives of the array.
RAID recovery (RAID status: Not active)	If re-inserting all the original hard disk drives to the NAS and they can be spun up, identified, accessed, and the hard drive superblock is not damaged.	If re-inserting all the original hard disk drives to the NAS and they can be spun up, identified, accessed, and the hard drive superblock is not damaged).
RAID crash	N-2 failed hard drive and any of the remaining hard drives cannot be spun up or identified or accessed.	N-3 and any of the remaining hard drives cannot be spun up or identified or accessed.

N = Number of hard disk drives in the array

Technical data

GNU GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<http://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install and run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable.

Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

“This License” refers to version 3 of the GNU General Public License.

“Copyright” also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

“The Program” refers to any copyrightable work licensed under this License. Each licensee is addressed as “you”. “Licensees” and “recipients” may be individuals or organizations.

To “modify” a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a “modified version” of the earlier work or a work “based on” the earlier work.

A “covered work” means either the unmodified Program or a work based on the Program.

To “propagate” a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To “convey” a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays “Appropriate Legal Notices” to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The “source code” for a work means the preferred form of the work for making modifications to it.

“Object code” means any non-source form of a work.

A “Standard Interface” means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The “System Libraries” of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A “Major Component”, in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The “Corresponding Source” for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work’s System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an “aggregate” if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation’s users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.
- c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.
- d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.
- e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A “User Product” is either (1) a “consumer product”, which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, “normally used” refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

“Installation Information” for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

“Additional permissions” are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered “further restrictions” within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An “entity transaction” is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A “contributor” is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's “contributor version”.

A contributor's “essential patent claims” are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, “control” includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a “patent license” is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To “grant” such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. “Knowingly relying” means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is “discriminatory” if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that

contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License “or any later version” applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS
