Note for Installing Camera Outdoor

When installing the **IR Arctic Box Camera** outdoor, be sure that:

1. The camera is set up above the junction box to prevent water from entering the camera along the cables.

2. Any PoE, power, audio and I/O cables are waterproofed using waterproof silicon rubber or the like.

3. The silica gel bag loses its effectiveness when the dry camera is opened. To prevent the lens from fogging up, replace the silica gel bag every time you open the camera, and conceal the gel bag in camera within 2 minutes of exposing to open air.

Note for USB Storage and WiFi Adapter

Mind the following limitations and requirements for using USB storage and GV-WiFi Adapter:

1. The USB hard drive must be of 2.5" or 3.5", version 2.0 or above.
2. The USB hard drive's storage capacity must not exceed 2TB.
3. USB flash drives and USB hubs are not supported.
4. External power supply is required for the USB hard drive.
5. To connect a GV-WiFi Adapter, make sure it is connected before the camera is powered on.

Note for Silica Gel Bags

1. The silica gel bag loses its effectiveness when the dry camera is opened. To prevent the lens from fogging up, replace the silica gel bag every time you open the camera, and conceal the gel bag in camera within 2 minutes of exposing to open air.
2. When the camera is shipped, a silica gel bag will be included inside the camera. For the first-time user, replace the silica gel bag prior to the installation to avoid foggy live view.

Chapter 1 Box Camera

The Box Camera is a series of indoor IP cameras consisting of fixed focal and varifocal models in different resolutions. The Box Camera supports lens replacement and features an automatic infrared-cut filter for day and night surveillance. The **super low lux** models are capable of displaying color live view in near darkness. Models equipped with a **mini USB port** can be connected wirelessly through a GV-WiFi Adapter (optional). The **WDR Pro** models can produce clear image for scenes with contrasting intensity of lights (see *1.2.1 Wide Dynamic Range Pro* for details). Models using **P-Iris** allow for precise control of exposure, producing images with better clarity and contrast. For details on related models, see *1.2 Features*. The Box Camera models are detailed below:

1.2.1 Wide Dynamic Range Pro

Objects may appear as silhouettes when they are backed with intense lights. The Wide Dynamic Range Pro (WDR Pro) is designed to solve this problem using a WDR sensor. In **GV-BX140DW**, **GV-BX2400 Series**, **GV-BX2600**, **GV-BX2700 Series**, **GV-BX3400 Series** and **GV-BX4700 Series**, the WDR sensor is able to process the image and show details in bright and dark areas at the same time. An example of WDR Pro in action is shown below.

No WDR: underexposure

WDR: perfect exposure

For GV-IPCam models that support WDR, the WDR effect is achieved through software programming.
