DESCRIPTION

Louroe Model VeriFact-550/555 are ceiling mount speakerphones designed to provide 2-way audio (listen/talkback) with various modes of audio/video transmission systems such as:

- DVR's
- IP Network Cameras
- PC
- Soundcards
- Video Servers

The VeriFact-550/555 provide line level audio input and output. It has amplifier that drives the built-in 4" speaker.

The gain of the microphone is factory adjusted. The gain of the audio output can be adjusted using the potentiometer on the PCB on the rear of the unit, the adjustment should be done in small increments. To adjust the audio output of the speaker, rotate the blue potentiometer clockwise (increase) or counterclockwise (decrease) slowly until the desired loudness is attained.

It is recommended to use the device in half duplex mode, however the unit has a built-in echo-cancellation system for when the device is configured for use in full duplex mode such that if the device recognizes that the audio output is beyond a set internal level, the incorporated microphone will be muted till the audio level falls.

The use of headphones or earphones is strongly recommended on the audio monitoring/receiving system to avoid acoustic feedback, this is essential on monitoring systems that do not have echo-cancellation functionality.
