Overview

VIVOTEK's FE9380 and FE9382 are two H.265 fisheye fixed dome network cameras, both featuring a detailed 5-Megapixel CMOS sensor that produces superb image clarity. By employing H.265 compression technology and VIVOTEK's Smart Stream III technology, these cameras can reduce both bandwidth and storage consumption by up to 80%* while retaining the highest standard of image quality.

Equipped with a fisheye lens for 180° panoramic view (wall mount) or 360° surround view (ceiling/floor mount) with zero blind spots, the cameras are able to provide coverage of wide, open areas, such as airports, shopping malls, retail stores, offices and more.

The cameras are both equipped with a removable IR-cut filter and WDR Pro technology, empowering the cameras to maintain optimal image quality around the clock and unparalleled visibility in high-contrast lighting environments. Moreover, the cameras are designed with full EN50155 compliance, vandal-proof IK10-rated, and weather-proof IP66-rated housing, ensuring that the camera can withstand shock, vibration, humidity, dust, and temperature fluctuations, and maintain stable and reliable video capture during vehicle movement.

* Depending on scene being monitored.

Revision History

Rev. 1.0: Initial release.

セキュリティ基準（新規則第34条の10）

「本製品は 電気通信事業者（移動通信会社、固定通信会社、インターネットプロバイダ等）の通信回線（公衆無線 LAN を含む）
に直接接続することができません。本製品をインターネットに接続する場合は、必ずルータ等
を経由し接続してください。」

Read Before Use

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

Symbols and Statements in this Document

INFORMATION: provides important messages or advices that might help prevent inconvenient or problem situations.

NOTE: Notices provide guidance or advices that are related to the functional integrity of the machine.

Tips: Tips are useful information that helps enhance or facilitate an installation, function, or process.

WARNING: or IMPORTANT: These statements indicate situations that can be dangerous or hazardous to the machine or you.

Electrical Hazard: This statement appears when high voltage electrical hazards might occur to an operator.

 **NOTE:**

Camera Hardware Preventative Maintenance:

1. Visual inspection of all major components including accessories, cabling and connections where accessible for signs of deterioration or damage.
2. Check and clean cameras, lenses and housings inside and out as needed.
 - Please do not scratch, damage, or leave fingerprints on the dome/front cover and/or lens because this may decrease image quality.
 - For general cleaning of dirty areas, it is suggested to use compressed air to remove dust and/or other debris in order not to damage the on-board components.
 - In order to clean oil stains, it is recommended to use a spray-type decomposing cleaner (absolutely avoid reciprocating wipes on the surface). After the oil has decomposed, spray it with water, dry with air, and/or absorb water with a cotton cloth or a soft cloth (dab, please avoid wiping).
 - Do not use harsh detergents, gasoline, benzene or acetone, etc. to clean as they may deform or cause damage to the product. Also, excessive cleaning could damage the surface.
3. Check images for correct field of view (pan, tilt and zoom focus) and adjust as necessary.
4. Check and replace the Micro SD memory card as needed.
 - Stop edge recording before removing the Micro SD memory card.
 - Make sure that the Micro SD memory card is right side up and do not insert it with force, otherwise it may be damaged.
 - When it is raining or the humidity is high, insertion or ejection of the Micro SD memory card is not recommended.
5. Disassembly of the dome/front cover carries the risk of internal dew condensation, so please remember to replace the desiccant bags on the inside of the cameras before reassembly.
6. Check that the camera view has not been blocked by obstacles and that you can see the property perimeter clearly.
7. Make sure the interiors of cameras and accessories, like mounting kits and/or enclosures, are clean and dry.
8. Make sure cameras are securely attached to the wall/ceiling/mounting kits.

 **IMPORTANT:**

1. Please contact VIVOTEK's certified dealers for power adapters.
2. Installation and maintenance service should only be performed by qualified technicians.
3. If powered by a power adapter, the adapter should be properly grounded.
4. The power cord must be connected to a socket or outlet with a ground connection.

IMPORTANT:

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

- To send URL commands in the address bar of your web browser, please remember to disable the Cross-Site Request Forgery (CSRF) protection in Configuration > Security > Miscellaneous.

- For up-to-date documentation of URL commands, please go to VIVOTEK's website, register an account with a business mail address and submit for authorization for SDK in Support > Downloads > SDK.

- For any further technical support, please contact our technical support department.

⚠️ IMPORTANT:

1. The camera is only to be connected to PoE networks without routing to outside plants.
 2. For PoE connection, use only UL listed I.T.E. with PoE output.
-
1. La caméra ne doit être raccordée qu'à des réseaux PoE, sans routage vers des installations extérieures.
 2. Pour les raccordements PoE, utilisez uniquement un équipement de TI homologué UL, avec une sortie PoE.

Use the camera only with a DC power supply that is UL listed, and limited power source (LPS) certified. The power supply should bear the UL listed and LPS marks. The power supply should also meet any safety and compliance requirements for the country of use.

n'utilisez la caméra qu'avec un bloc d'alimentation CC homologué UL, ainsi qu'avec une alimentation limitée (LPS) certifiée. Le bloc d'alimentation doit porter les indications d'homologation UL et LPS. Il doit également répondre aux exigences en matière de sécurité et de conformité relatives au pays d'utilisation.

Hardware Reset

The reset button is used to reset the system or restore the factory default settings. Sometimes resetting the system can return the camera to normal operation. If the system problems remain after reset, press the reset button longer to restore the factory settings and install again.

Reset: Press and release the recessed reset button with a straightened paper clip. Wait for the Network Camera to reboot.

Restore: Press and hold the recessed reset button for at least several seconds to restore. Note that all settings will be restored to factory defaults.

Micro SD/SDHC/SDXC Card Capacity

This network camera is compliant with **Micro SD/SDHC/SDXC 32GB, 64GB**, and other preceding standard SD cards preferably with class 6 speed.

Physical Description

Inner View

Outer View

LED Definition

Item	LED Status	Description
1	Steady Red	Power on and system booting
	Red LED off	Powered off
2	Steady Red + blinking Green every 1 sec. (Green LED on for 1 sec and off for another)	Network heartbeat
	Steady Red + Green LED off	Network disconnected
3	Blinking Red every 0.15 sec. + Blinking Green every 1 sec. (Red LED on for 0.15 sec. and Green LED on for 1 sec. and off for another)	Upgrading firmware
4	Blinking Red every 0.15 sec. + blinking Green every 0.15 sec	Restoring defaults

Mounting Positions

Refer to the diagram on the right for the mounting hole positions and the dimensions of the base plate.

 The base plate provides mounting holes for a variety of electrical boxes. Refer to below for their associated mount hole positions:

4" square and round box

Cantex 3/4" type FSE 2 Gang, Outdoor/Indoor electrical box
Generic 3/4" conduit box enclosure, 3/5 holes

Hardware Installation

1. Jot down the MAC address of the camera for later reference. This is especially important for an installation consisting of many cameras.

2. Remove the dome cover by loosening the T10 anti-tamper screws.

 Please avoid using an Ethernet cable with a large relief boot. You may try to remove the relief boot. If not possible, use a round cable without the relief boot.

3. Install an SD card if onboard storage is preferred.

4. Use the alignment sticker to drill mounting hole or a cabling routing hole on a wall or ceiling. Route an Ethernet cable through the wall or ceiling. Hammer the included anchors into the mounting holes.

5. Hold the camera with both hands and press the snap-in tab to separate the base plate from the camera.

6. Secure the base plate to wall using the included screws.

7. Remove the silicone seal from the routing hole.

8. Remove the tip of the silicone seal by pulling it off. Insert the RJ45 connector of your Ethernet cable into the penetration cap.

9. Push the penetration cap through the center of the silicone seal.

10. Install the silicone seal to its original routing hole.

11. Connect the Ethernet connector and secure the top of the silicone seal to the routing hole.
You may need to adjust its position.

12. Pull the cable slightly backward. Please do not leave the edge of center hole folded toward the inside of the camera. Doing so will compromise its waterproof feature.

13. If you purchased a DI/DO combo cable for the FE9382, pass the white pin headers through the cabling hole. Using a crescent wrench, tighten a hex nut and washer to waterproof the combo cable. Connect these headers to the connectors on camera.

14. Replace the desiccant bag on the camera.

15. Secure the camera to the base plate by aligning the snap-in tabs. Press until the snap-in tabs are firmly in place.

16. Install the dome cover by aligning the side-routing tab with the cabling cut-out on the base plate.

17. Secure the dome cover by fastening the T10 anti-tamper screws.

18. Remove the protective sheet from the dome cover.

19. Please visit VIVOTEK's website to Install the "Shepherd" software utility. The program will search for VIVOTEK Video Receivers, Video Servers or Network Cameras on the same LAN.

Double-click on the camera's MAC address to open a web console with the camera.

Software Installation

20. Install the **Shepherd** utility, which helps you locate and configure your Network Camera in the local network. If your camera comes without the CD, go to VIVOTEK's website, and locate the utility in the Downloads > Software page.

20-1. Run the Shepherd utility.

20-2. The program will conduct an analysis of your network environment.

20-3. The program will search for all VIVOTEK network devices on the same LAN.

20-4. After a brief search, the installer window will prompt. Click on the MAC and model name that matches the one printed on the product label. You can then double-click on the address to open a management session with the Network Camera.

Forceful Password Configuration

21. The first time you log in to the camera, the firmware will prompt for a password configuration for security concerns.

21-1. Since your camera is used for the first time, there is no password. Enter “root” as the user name, and nothing for the password.

21-2. Enter the combination of alphabetic and numeric characters to fulfill the password strength requirement. The default name for the camera administrator is “root”, and can not be changed.

The screenshot shows the "Configure password" screen of the VIVOTEK configuration interface. At the top left is the VIVOTEK logo and website address. At the top right is a "Language" link. The main section is titled "Configure password" and includes instructions: "At least 8 characters with no space, one alphabet character(uppercase or lowercase), and one numeric character". There are three input fields: "User name" (set to "root"), "User password" (a masked field), and "Confirm user password" (a masked field). A checked checkbox says "Enable https connection to secure the configuration for password". Below the fields is a note: "*The new password will be applied to all connections". At the bottom are "Save" and "Cancel" buttons.

Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, _, and ~. You can use them in the password combination.

21-3. Another prompt will request for the password you just configured. Enter the password and then you can start configure your camera and see the live view.

DI/DO Diagram

Dry contact with external DC power source to supply a relay. Dry contact is the safest connection to protect devices.

Wet contact with external DC power source to supply a relay.

1. The DO+ pin (3.3V) provides $3.3V \pm 10\%$ output voltages, and the max. load is 50mA.
 2. The max. voltage for the DO- pins is 30VDC (External power).
- In order to control AC devices, the above diagram can be taken in consideration. The diagram uses a relay to control the ON/OFF condition of the AC device.
3. An external relay can be triggered by using DO+ or by an external power source, depending on the type of relay you use.
 4. In case of using an individual relay (instead of using a relay module), for protection against voltage or current spikes, a transient voltage suppression diode must be connected in parallel with the inductive load.

Dry contact and using camera's DO+ to supply a relay.

Network Deployment

Setting up the Network Camera over the Internet

There are several ways to set up the Network Camera over the Internet. The first way is to set up the Network Camera behind a router. The second way is to utilize a static IP. The third way is to use PPPoE.

Internet connection via a router

Before enabling the access to the Network Camera over the Internet, make sure you have a router and follow the steps below.

1. Connect your Network Camera behind a router, the Internet environment is illustrated below. Regarding how to obtain your IP address, please refer to Software Installation on page 21 for details.

2. In this case, if the Local Area Network (LAN) IP address of your Network Camera is 192.168.0.3, please forward the following ports for the Network Camera on the router.

- Secondary HTTP port: 8080
- RTSP port: 554
- RTP port for audio: 5558
- RTCP port for audio: 5559
- RTP port for video: 5556
- RTCP port for video: 5557

If you have changed the port numbers on the Network page, please open the ports accordingly on your router. For information on how to forward ports on the router, please refer to your router's user's manual.

3. Find out the public IP address of your router provided by your ISP (Internet Service Provider). Use the public IP and the secondary HTTP port to access the Network Camera from the Internet. Please refer to Network Type on page 90 for details.

For example, your router and IP settings may look like this:

Device	IP Address: internal port	IP Address: External Port (Mapped port on the router)
Public IP of router	122.146.57.120	
LAN IP of router	192.168.2.1	
Camera 1	192.168.2.10:80	122.146.57.120:8000
Camera 2	192.168.2.11:80	122.146.57.120:8001
...

Configure the router, virtual server or firewall, so that the router can forward any data coming into a preconfigured port number to a network camera on the private network, and allow data from the camera to be transmitted to the outside of the network over the same path.

From	Forward to
122.146.57.120:8000	192.168.2.10:80
122.146.57.120:8001	192.168.2.11:80
...	...

When properly configured, you can access a camera behind the router using the HTTP request as follows: <http://122.146.57.120:8000>

If you change the port numbers on the Network configuration page, please open the ports accordingly on your router. For example, you can open a management session with your router to configure access through the router to the camera within your local network. Please consult your network administrator for router configuration if you have troubles with the configuration.

For more information with network configuration options (such as that of streaming ports), please refer to Configuration > Network Settings. VIVOTEK also provides the automatic port forwarding feature as an NAT traversal function with the precondition that your router must support the UPnP port forwarding feature.

Internet connection with static IP

Choose this connection type if you are required to use a static IP for the Network Camera. Please refer to LAN configuration on page 90 for details.

Internet connection via PPPoE (Point-to-Point over Ethernet)

Choose this connection type if you are connected to the Internet via a DSL Line. Please refer to PPPoE on page 112 for details.

Set up the Network Camera through Power over Ethernet (PoE)

When using a PoE-enabled switch

The Network Camera is PoE-compliant, allowing transmission of power and data via a single Ethernet cable. Follow the below illustration to connect the Network Camera to a PoE-enabled switch via an Ethernet cable.

NOTE:

1. The camera is only to be connected to PoE networks without routing to outside plants.
2. For PoE connection, use only UL listed I.T.E. with PoE output.

When using a non-PoE switch

If your switch/router does not support PoE, use a PoE power injector (optional) to connect between the Network Camera and a non-PoE switch.

 **IMPORTANT:**

If DC power is preferred, it should comply with: O/P: 12VDC, 2A min., L.P.S. per IEC 60950-1.

NOTE:

1. If you encounter problems with displaying live view or the onscreen plug-in control, you may try to remove the plug-ins that might have been installed on your computer. Remove the following folder: C:\Program Files (x86)\Camera Stream Controller\.
 2. If you forget the root (administrator) password for the camera, you can restore the camera defaults by pressing the reset button for longer than 5 seconds.
 3. If DHCP is enabled in your network, and the camera cannot be accessed, run the IW2 utility to search the network. If the camera has been configured with fixed IP that does not comply with your local network, you may see its default IP 169.254.x.x. If you still cannot find the camera, you can restore the camera to its factory defaults.
 4. If you change your network parameters, e.g., added a connection to a LAN card, re-start the IW2 utility.
-

Accessing the Network Camera

This chapter explains how to access the Network Camera through web browsers, RTSP players, 3GPP-compatible mobile devices, and VIVOTEK recording software.

Using Web Browsers

! IMPORTANT:

- Currently the Network Camera utilizes 32-bit ActiveX plugin. You **CAN NOT** open a management/view session with the camera using a 64-bit IE browser.
- If you encounter this problem, try execute the iexplore.exe program from C:\Windows\SysWOW64. A 32-bit version of IE browser will be installed.
- On Windows 7, the 32-bit explorer browser can be accessed from here: C:\Program Files (x86)\Internet Explorer\iexplore.exe

Use Installation Wizard 2 (IW2) to access the Network Cameras on the LAN.

If your network environment is not a LAN, follow these steps to access the Network Camera:

1. Launch your web browser (e.g., Microsoft® Internet Explorer, Mozilla Firefox, or Netscape).
2. Enter the IP address of the Network Camera in the address field. Press **Enter**.
3. The live video will be displayed in your web browser.
4. If it is the first time installing the VIVOTEK network camera, an information bar will prompt as shown below. Follow the instructions to install the required plug-in on your computer.

**NOTE:**

For **Mozilla Firefox** users, your browser will use **Quick Time** to stream live video. If you do not have QuickTime on your computer, please download QuickTime from Apple Inc's website, and then launch your web browser.

**Tips:**

- The onscreen Java control can malfunction under the following situations:
A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
- In the event of plug-in compatibility issues, you may try to uninstall the plug-in that was previously installed.

**NOTE:**

1. By default, your Network Camera is not password-protected. To prevent unauthorized access, it is highly recommended to configure a password for your camera later. *For more information about how to enable password protection, please refer to Security on page 109.*
2. If you see a dialogue box indicating that your security settings prohibit running ActiveX Controls®, please enable ActiveX Controls for your browser.

To enable the ActiveX® Controls for your browser:

- 2-1. Choose Tools > Internet Options > Security > Custom Level.

- 2-2. Look for Download signed ActiveX® controls; select Enable or Prompt. Click OK.

- 2-3. Refresh your web browser, then install the ActiveX® control. Follow the instructions to complete installation.

Using RTSP Players

To view the H.265 or H.264 streaming media using RTSP players, you can use one of the following players that support RTSP streaming.

Quick Time Player

VLC Player

1. Launch the RTSP player.
2. Choose File > Open URL. A URL dialog box will prompt.
3. The address format is rtsp://<ip address>:<rtsp port>/<RTSP streaming access name for stream1 to stream4>

As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 97.

For example:

4. The live video will be displayed in your player. For more information on how to configure the RTSP access name, please refer to RTSP Streaming on page 97 for details.

NOTE:

Quick Time player only supports playback of H.265 or H.264 stream, and not the MJPEG stream. In terms of audio codec, QuickTime only supports AAC. Since this camera supports G.711 codec, audio is not available on Quick Time.

VLC player supports H.265/H.264/MPEG-4/MJPEG, and all audio codecs supported by VIVOTEK's cameras.

The RTSP players will show the original circular-shape image. You can access the Regional views via the ST7501 or VAST software. See page 98 for an example.

Using 3GPP-compatible Mobile Devices

To view the streaming media through 3GPP-compatible mobile devices, make sure the Network Camera can be accessed over the Internet. For more information on how to set up the Network Camera over the Internet, please refer to Setup the Network Camera over the Internet on page 27.

To utilize this feature, please check the following settings on your Network Camera:

1. Because most players on 3GPP mobile phones do not support RTSP authentication, make sure the authentication mode of RTSP streaming is set to disable.
For more information, please refer to RTSP Streaming on page 97.
2. As the the bandwidth on 3G networks is limited, you will not be able to use a large video size.
Please set the video and audio streaming parameters as listed below.
For more information, please refer to Stream settings on page 79.

Video Mode	MPEG-4
Frame size	176 x 144
Maximum frame rate	5 fps
Intra frame period	1S
Video quality (Constant bit rate)	40kbps
Audio type (GSM-AMR)	12.2kbps

3. As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 97.
4. Launch the player on the 3GPP-compatible mobile devices (e.g., Real Player).
5. Type the following URL commands in the URL field.
The address format is rtsp://<public ip address of your camera>:<rtsp port>/<RTSP streaming access name for stream 3>.

For example:

 **Tips:**

1. The onscreen Java control can malfunction under the following situations: A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
2. If you encounter problems with displaying the configuration menus or UI items, try disable the Compatibility View on IE8 or IE9.

You may also press the F12 key to open the developer tools utility, and then change the Browser Mode to the genuine IE8 or IE9 mode.

- In the event of plug-in compatibility issues, you may try to uninstall the plug-in that was previously installed.

Using VIVOTEK Recording Software

The product software CD also contains a VAST recording software, allowing simultaneous monitoring and video recording for multiple Network Cameras. Please install the recording software; then launch the program to add the Network Camera to the Channel list. For detailed information about how to use the recording software, please refer to the user's manual of the software or download it from <http://www.vivotek.com>.

Tips:

1. If you encounter problems with displaying live view or the onscreen plug-in control, you may try to remove the plug-ins that might have been installed on your computer. Remove the following folder: C:\Program Files (x86)\Camera Stream Controller\.
2. If you forget the root (administrator) password for the camera, you can restore the camera defaults by pressing the reset button for longer than 5 seconds.
3. If DHCP is enabled in your network, and the camera cannot be accessed, run the Shepherd utility to search the network. If the camera has been configured with fixed IP that does not comply with your local network, you may see its default IP 169.254.x.x. If you still cannot find the camera, you can restore the camera to its factory defaults.
4. If you change your network parameters, e.g., added a connection to a LAN card, re-start the Shepherd utility.

Main Page

This chapter explains the screen elements on the main page. It is composed of the following sections: VIVOTEK INC. Logo, Host Name, Camera Control Area, Configuration Area, and Live Video Window.

VIVOTEK INC. Logo

Click this logo to visit the VIVOTEK website.

Host Name

The host name can be customized to fit your needs. For more information, please refer to System > General Settings on page 54.

Camera Control Area

Display mode: This is a brand new configuration menu exclusively designed for Fisheye cameras. Due to the fisheye lens' wide coverage of 180° hemispheric and 360° panoramic views and to manipulate the details within, the following display modes are provided:

- 1O** - One Original fisheye view.
- 1P** - One Panoramic view
- 1R** - One Regional view
- 1P2R** - One Panoramic and two Regional views ([Wall mount](#))
- 2P** - Two Panoramic views
- 1P3R** - One Panoramic and three Regional views ([Wall mount](#))
- 1O3R** - One Original and three Regional views
- 4R** - Four Regional views
- 4R PRO** - Four Regional views interactively displayed when the field of view changes in any of the views
- 1O8R** - One Original and eight Regional views

- * Most display modes are available in the Ceiling mount type.
- * See following discussions for detailed explanation of these modes. If selected, the Wall mount type provides another two distinctive modes.

1O (Original) Display mode:

When mounted on a ceiling, the fisheye camera can cover an approximate of 64 m² surveillance area (installed at a height of approximately 3 meters), while still keeping details in videos with recognizable facial features of people trafficking through the area.

The 1O view is especially adequate for taking an overview glimpse of the surveillance area when mounted on the ceiling.

1O View (Original View)

1P (Single Panoramic) Display mode:

With image correction algorithms in firmware, the hemispheric image is transformed into a rectilinear stripe in the 1P display mode. Viewers can use the PTZ panel or simply use mouse swipe to quickly move through the 360° panoramic view. (Mouse control on the Panoramic view is available with the Ceiling mount type.)

When mounted on a wall, this mode can cover a 180° overview from side to side, e.g., on the entrance of a building or a corridor.

Note that the 1P view is apt for an overview, the Zoom in/out function does not apply in this mode.

1R (Single Regional) Display mode:

The 1R mode provides access to one image section within the hemisphere. You can zoom in or out (using the mouse wheel or PTZ panel) or travel to other areas in the hemisphere using mouse clicks and swipes. A single click on a particular object can bring the object to the center of your view window. Click and hold down the left mouse button, and you can swipe the view in all directions.

2P (Dual Panoramic View) Display mode:

Similar to 1P, the 2P display mode provides simultaneous access to both the left and right sections of a hemisphere. Both panoramic views are corrected into a more viewable dewarped image. Viewers can use a mouse click and swipe to quickly scroll horizontally through the surveillance area.

* Note that the dividing line falls approximately on the center of the VIVOTEK logo on camera.

1O3R (One Original & Three Regional) Display mode:

The 1O3R mode provides access to multiple live view sections within the hemisphere and the reference to their relative positions on an Original circular view. The FOV indicators (#1 ~ #3) interact with your current operation as you may zoom in/out or move the live view window to a different place.

You can zoom in or out or travel to other areas within the hemisphere using identical methods as previously described in the 1R mode.

You can also change the locations of Regional views by dragging the FOV indicators on the "Original" circular view.

1O3R (Original & Regional) Mode Screen Control

Tips:

In a Regional view displaying 100% of video feed (via the Resize buttons - see page 44), your mouse wheel can be used to scroll the view window vertically before you click on a live image. After you click on the live image, the mouse wheel becomes the zoom in/out tool.

4R (Four Regional) Display mode:

The view control and look and feel are identical to that as described in the 1O3R mode except that the Original circular view is absent from this mode.

4R PRO (Four Regional Proactive) Display mode:

The 4R PRO mode is similar to the 4R mode except that the quad view windows consecutively rotate in correspondence to the change of view area in one window. Note that zoom in/out and tilt control is not available in this mode.

1O8R (One Original and Eight Regional) Display mode:

The view control and look and feel are identical to that as described in the 1O3R mode.

Note that if you change the position of a view in hemisphere, e.g., #3 window, you may lose the configuration change by switching to another display mode. The live view window does not automatically save your view section layout.

Video Stream: This Network Camera supports multiple streams (stream #1 ~ #4) simultaneously. You can select any one of them for live viewing. For more information about multiple streams, please refer to page 79 for detailed information.

Manual Trigger: Click to manually enable or disable an event trigger. Please configure an event setting before enabling this function. A total of 3 or 4 event settings can be configured. For more information about event setting, please refer to page 127. If you want to hide this item on the homepage, please go to the **System > Homepage Layout > General settings > Customized button** to deselect the “show manual trigger button” checkbox.

Digital Output: Click to turn the digital output device on or off.

PTZ Control Panel:

Pano.: Click this button to start the automatic horizontal pan (360° continuous rotation).

Stop: Click this button to stop the Auto Pano and Auto Rotate functions.

Rotate: Once the Administrator has configured the list of preset positions (including the zoom-in action on a particular position), click this button to command the camera to display the preset positions in a consecutive order. The Network Camera will display those positions continuously. For more information, please refer to PTZ control on page 124.

Pan /Tilt /Zoom speed: Adjust the speed of these controls when exerted:

Pan speed	Tilt speed	Zoom speed	Panoramic speed	
-5	-5	-5	-	Slower
-4	-4	-4	-	
-3	-3	-3	-	
-2	-2	-2	-	
-1	-1	-1	-	
0	0	0	0	
1	1	1	1	
2	2	2	2	
3	3	3	3	
4	4	4	4	
5	5	5	5	Faster

Configuration Area

Client Settings: Click this button to access the client setting page. For more information, please refer to Client Settings on page 49.

Configuration: Click this button to access more of the configuration options provided with the Network Camera. It is suggested that a password is applied to the Network Camera so that only the administrator can configure the Network Camera. For more information, please refer to the description for the Configuration menus on page 53.

Language: Click this button to choose a language for the user interface. Language options are available in: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文. You can also change a language on the Configuration page; please refer to page 53.

Hide Button

You can click the hide button to hide the control panel or display the control panel.

Resize Buttons

Click the Auto button, the video cell will resize automatically to fit the monitor.

Click 100% is to display the original homepage size.

Click 50% is to resize the homepage to 50% of its original size.

Click 25% is to resize the homepage to 25% of its original size.

- The following window is displayed when the video mode is set to MJPEG:

Video Title: The video title can be configured. For more information, please refer to Media > Image on page 66.

Time: Display the current time. For more information, please refer to Media > Image on page 66.

Title and Time: Video title and time can be stamped on the streaming video. For more information, please refer to Media > Image on page 66.

2.0x Title 2014/03/05 10:39:08

Video Control Buttons: Depending on the camera model and your current configuration, some buttons may not be available.

Snapshot: Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (*.jpg) or BMP (*.bmp) format.

Start MP4 Recording: Click this button to record video clips in MP4 file format to your computer. Press the Stop MP4 Recording button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 50 for details.

Full Screen: Click this button to switch to full screen mode. Press the "Esc" key to switch back to normal mode.

Please refer to page 124 for PTZ settings.

Live Video Window

- The following window is displayed when the video mode is set to H.265 or H.264:

Video Title: The video title can be configured. For more information, please refer to Video settings on page 79.

H.264 Protocol and Media Options: The transmission protocol (TCP or UDP, etc.)and media options for H.265 or H.264 video streaming. For further configuration, please refer to Client Settings on page 49.

Time: Display the current time. For further configuration, please refer to Media > Image > General settings on page 66.

Title and Time: The video title and time can be stamped on the streaming video. For further configuration, please refer to Media > Image > General settings on page 66.

Video and Audio Control Buttons: Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

Snapshot: Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (*.jpg) or BMP (*.bmp) format.

Pause: Pause the transmission of the streaming media. The button becomes the **Resume** button after clicking the Pause button.

Stop: Stop the transmission of the streaming media. Click the **Resume** button to continue transmission.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  Stop MP4 Recording button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 50 for details.

 **Volume:** When the  Mute function is not activated, move the slider bar to adjust the volume on the local computer.

 **Mute:** Turn off the volume on the local computer. The button becomes the  Audio On button after clicking the Mute button.

 **Talk:** Click this button to talk to people around the Network Camera. Audio will project from the external speaker connected to the Network Camera. Click this button  again to end talking transmission.

 **Mic Volume:** When the  Mute function is not activated, move the slider bar to adjust the microphone volume on the local computer.

 **Full Screen:** Click this button to switch to full screen mode. Press the "Esc" key to switch back to normal mode.

 **Tips:**

1. The onscreen Java control can malfunction under the following situations: A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
2. If you encounter problems with displaying the configuration menus or UI items, try disable the Compatibility View on IE8 or IE9.

You may also press the **F12** key to open the developer tools utility, and then change the Browser Mode to the genuine IE8 or IE9 mode.

Client Settings

This chapter explains how to select the stream transmission mode and saving options on the local computer. When completed with the settings on this page, click **Save** on the page bottom to enable the settings.

H.265 / H.264 Media Options

Select to stream video or audio data or both. This is enabled only when the video mode is set to H.265 or H.264.

H.265 / H.264 Protocol Options

Depending on your network environment, there are four options with the transmission protocols with the H.265 or H.264 streaming:

UDP unicast: This protocol allows for more real-time audio and video streams. However, network packets may be lost due to network burst traffic and images may be broken. Activate UDP connection when occasions require time-sensitive responses and the video quality is less important. Note that each unicast client connecting to the server takes up additional bandwidth and the Network Camera allows up to ten simultaneous accesses.

UDP multicast: This protocol allows multicast-enabled routers to forward network packets to all clients requesting streaming media. This helps to reduce the network transmission load of the Network Camera while serving multiple clients at the same time. Note that to utilize this feature, the Network Camera must be configured to enable multicast streaming at the same time. For more information, please refer to RTSP Streaming on page 97.

TCP: This protocol guarantees the complete delivery of streaming data and thus provides better video quality. The downside of this protocol is that its real-time effect is not as good as that of using the UDP protocol.

HTTP: This protocol allows the same quality as TCP protocol without needing to open specific ports for streaming under some network environments. Users behind a firewall can utilize this protocol to allow camera's streaming data to pass through.

Two way audio

Half duplex: Audio is transmitted from one direction at a time, e.g., from a PC holding a web console with the camera.

Full duplex: Audio is transmitted in both directions simultaneously.

MP4 Saving Options

Users can record live video as they are watching it by clicking the "Start MP4 Recording" button on the main page. Here, you can specify the storage destination and file name.

Folder: Specify a storage destination for the recorded video files.

File name prefix: Enter the text that will be appended to the front of the video file name.

Add date and time suffix to the file name: Select this option to append the date and time to the end of the file name.

Local streaming buffer time

Due to possible occurrences of unsteady network transmission, live streaming may lag and not be very smoothly. If you enable this option, the live streaming will be stored on the client PC's cache memory for a few seconds before being played on the client computer's live view window. This helps produce a smoother live streaming. If you enter a value of 3,000 milliseconds, the streaming will delay for 3 seconds.

Joystick settings

Enable Joystick

Connect a joystick to a USB port on your management computer. Supported by the plug-in (Microsoft's DirectX), once the plug-in for the web console is loaded, it will automatically detect if there is any joystick on the computer. The joystick should work properly without installing any other driver or software.

Then you can begin to configure the joystick settings of connected devices. Please follow the instructions below to enable joystick settings.

1. Select a detected joystick, if there are multiple, from the Selected joystick menu. If your joystick is not detected, it may be defective.
2. Click Calibrate or Configure buttons to configure the joystick-related settings.

Buttons Configuration

Click the **Configure Buttons** button, a window will prompt as shown below. Please follow the steps below to configure your joystick buttons:

1. Select a button number from the Button # pull-down menu.

Tips

If you are not sure of the locations of each button, use the **Properties** window in the **Game Controllers** utility.

2. Select a corresponding action, such as Patrol or Preset#.

3. Click the **Assign** button to assign an action to the button. You can delete an association by selecting a button number, and then click the **Delete** button.

Repeat the process until you are done with the configuration of all preferred actions.

The buttons you define should appear on the button list accordingly.

4. Please remember to click the **Save** button on the Client settings page to preserve your settings.

Configuration

Click **Configuration** on the main page to enter the camera setting pages. Note that only Administrators can access the configuration page.

VIVOTEK provides an easy-to-use user interface that helps you set up your network camera with minimal effort. In order to simplify the user interface, detailed information will be hidden unless you click on the function item. When you click on the first sub-item, the detailed information for the first sub-item will be displayed; when you click on the second sub-item, the detailed information for the second sub-item will be displayed and that of the first sub-item will be hidden.

The following is the interface of the main page:

Each function on the configuration list will be explained in the following sections.

The Navigation Area provides access to all different views from the **Home** page (for live viewing), **Configuration** page, and multi-language selection.

System > General settings

This section explains how to configure the basic settings for the Network Camera, such as the host name and system time. It is composed of the following two columns: System and System Time.

System

Host name:

Turn off the LED indicator

Host name: Enter a desired name for the Network Camera. The name will be displayed at the top center of the main page.

Turn off the LED indicator: Click to disable the onboard LEDs.

System time

System time

Time zone:

Note: You can upload your daylight saving time rules on [Maintenance](#) page or use the camera default value.

Keep current date and time

Synchronize with computer time

Manual

Automatic

Save

Time zone : Select the appropriate time zone from the list. If you want to upload Daylight Savings Time rules, please refer to **System > Maintenance > Import/ Export files** on page 63 for details.

Keep current date and time: Select this option to preserve the current date and time of the Network Camera. The Network Camera's internal real-time clock maintains the date and time even when the power of the system is turned off.

Synchronize with computer time: Select this option to synchronize the date and time of the Network Camera with the local computer. The read-only date and time of the PC is displayed as updated.

Manual: The administrator can enter the date and time manually. Note that the date and time format are [yyyy/mm/dd] and [hh:mm:ss].

Automatic: The Network Time Protocol is a protocol which synchronizes computer clocks by periodically querying an NTP Server.

NTP server: Assign the IP address or domain name of the time-server. Leaving the text box blank connects the Network Camera to the default time servers.

Update interval: Select to update the time using the NTP server on an hourly, daily, weekly, or monthly basis.

When finished with the settings on this page, click **Save** at the bottom of the page to enable the settings.

System > Homepage layout

This section explains how to set up your own customized homepage layout.

General settings

This column shows the settings of your homepage layout. You can manually select the background and font colors in Theme Options (the second tab on this page). The settings will be displayed automatically in this Preview field. The following shows the homepage using the default settings:

Hide Powered by VIVOTEK

- Hide Powered by VIVOTEK: If you check this item, it will be removed from the homepage.

Logo graph

Here you can change the logo at the top of your homepage.

Follow the steps below to upload a new logo:

1. Click **Custom** and the Browse field will appear.
2. Select a logo from your files.
3. Click **Upload** to replace the existing logo with a new one.
4. Enter a website link if necessary.
5. Click **Save** to enable the settings.

Customized button

If you want to hide the manual trigger buttons on the homepage, please uncheck this item. This item is selected by default.

Show manual trigger button

Save

Theme Options

Here you can change the color of your homepage layout. There are three types of preset patterns for you to choose from. The new layout will simultaneously appear in the **Preview** field. Click **Save** to enable the settings.

The screenshot shows the 'Theme options' tab selected. On the left, there's a preview window titled 'Mega-Pixel Network' displaying a video stream of a kitchen area. Below the preview are two sections: 'Themes' (with four preset patterns shown) and 'Color' (with color swatches and hex codes). A 'Save' button is at the bottom right. Labels with orange arrows point to specific elements:

- Font Color of the Video Title (points to the blue text 'Mega-Pixel Network' in the preview)
- Background Color of the Control Area (points to the light blue background of the control panel)
- Font Color of the Configuration Area (points to the dark blue font in the configuration section)
- Background Color of the Configuration Area (points to the dark blue background of the configuration section)
- Preset patterns (points to the 'Themes' section)
- Font Color of the Video Title (points to the blue text 'Mega-Pixel Network' in the preview)
- Background Color of the Video Area (points to the light blue background of the video area)
- Frame Color (points to the blue border around the video area)

■ Follow the steps below to set up a custom homepage:

1. Click **Custom** on the left column.
2. Click to select a color on on the right column.

3. The palette window will pop up as shown below.

4. Drag the slider bar and click on the left square to select a desired color.
5. The selected color will be displayed in the corresponding fields and in the **Preview** column.
6. Click **Save** to enable the settings.

System > Logs

This section explains how to configure the Network Camera to backup system log to a remote server.

Log server settings

Log server settings

Enable remote log

IP address:

port:

Save

Follow the steps below to set up the remote log:

1. Select **Enable remote log**.
2. In the IP address text box, enter the IP address of the remote server.
2. In the port text box, enter the port number of the remote server.
3. When completed, click **Save** to enable the setting.

You can configure the Network Camera to send the system log file to a remote server as a log backup. Before utilizing this feature, it is suggested that the user install a log-recording tool to receive system log messages from the Network Camera. An example is Kiwi Syslog Daemon. Visit <http://www.kiwisyslog.com/kiwi-syslog-daemon-overview/>.

System log

This column displays the system log in chronological order. The system log is stored in the Network Camera's buffer and dated events will be overwritten when the number of events reaches a limit.

Date	Time	Message
Jul 4	09:45:47	syslogd 1.5.0: restart.
Jul 4	09:45:48	[swatchdog]: Ready to watch httpd.
Jul 4	09:45:49	[EVENT MGR]: Starting eventmgr with support for EcTun
Jul 4	09:45:49	[EVENT MGR]: Task config file: there is no valid event in recording_task.xml, skip it
Jul 4	09:45:49	[EVENT MGR]: Task config file: there is no valid event in event_task.xml, skip it
Jul 4	09:45:51	[DRM Service]: Starting DRM service.
Jul 4	09:46:01	[UPnPIGDCP]: Search IGD failed
Jul 4	09:46:01	[swatchdog]: Reduplicate registration from configer.
Jul 4	09:46:01	[swatchdog]: Ready to watch configer.
Jul 4	09:46:02	automount[723]: >> mount: mounting /dev/mmcblk0p1 on /mnt/auto/CF failed: No such device or address
Jul 4	09:46:02	automount[723]: mount(generic): failed to mount /dev/mmcblk0p1 (type vfat) on /mnt/auto/CF
Jul 4	09:46:02	automount[732]: >> mount: mounting /dev/mmcblk0p1 on /mnt/auto/CF failed: No such device or address
Jul 4	09:46:02	automount[732]: mount(generic): failed to mount /dev/mmcblk0p1 (type vfat) on /mnt/auto/CF
Jul 4	09:46:02	[ThermalD]: Can not access thermal sensor!
Jul 4	09:46:03	[SYS]: Serial number = 0002D112C715
Jul 4	09:46:03	[SYS]: System starts at Mon Jul 4 09:46:03 UTC 2011
Jul 4	09:46:03	== NET INFO ==

You can install the included VAST recording software, which provides an Event Management function group for delivering event messages via emails, GSM short messages, onscreen event panel, or to trigger an alarm, etc. For more information, refer to the VAST User Manual.

Access log

Access log displays the access time and IP address of all viewers (including operators and administrators) in a chronological order. The access log is stored in the Network Camera's buffer and older events will be overwritten when the number of events reaches a limit.

The screenshot shows a user interface for viewing logs. At the top, there are three tabs: "System log" (grayed out), "Access log" (highlighted in blue), and another tab whose name is partially visible. Below the tabs is a scrollable list area containing the following log entries:

```

May 4 19:00:17 [RTSP SERVER]: Start one session, IP=192.168.4.101
May 4 19:00:39 [RTSP SERVER]: Stop one session, IP=192.168.4.101
May 4 19:00:59 [RTSP SERVER]: Start one session, IP=192.168.4.101
May 4 19:14:42 [RTSP SERVER]: Stop one session, IP=192.168.4.101
May 4 19:16:11 [RTSP SERVER]: Start one session, IP=192.168.4.101
May 4 19:16:20 [RTSP SERVER]: Stop one session, IP=192.168.4.101

```

VADP log

VADP log contains the information for the onboard VADP packages, including memory usage, module load and unload information.

The screenshot shows a user interface for viewing logs. At the top, there are three tabs: "System log" (grayed out), "Access log" (grayed out), and "VADP log" (highlighted in blue). Below the tabs is a scrollable list area containing the following log entries:

```

```

System > Maintenance

This chapter explains how to restore the Network Camera to factory default, upgrade firmware version, etc.

General settings > Upgrade firmware

The screenshot shows a user interface for upgrading firmware. It includes a title 'Upgrade firmware', a text input field labeled 'Select firmware file:' with a 'Browse...' button, and a large 'Upgrade' button.

This feature allows you to upgrade the firmware of your Network Camera. It takes a few minutes to complete the process.

Note: Do not power off the Network Camera during the upgrade!

Follow the steps below to upgrade the firmware:

1. Download the latest firmware file from the VIVOTEK website. The file is in .pkg file format.
2. Click **Browse...** and specify the firmware file.
3. Click **Upgrade**. The Network Camera starts to upgrade and will reboot automatically when the upgrade completes.

If the upgrade is successful, you will see "Reboot system now!! This connection will close". After that, re-access the Network Camera.

The following message is displayed when the upgrade has succeeded.

Reboot system now!!
This connection will close.

The following message is displayed when you have selected an incorrect firmware file.

Starting firmware upgrade...
Do not power down the server during the upgrade.
The server will restart automatically after the upgrade is completed.
This will take about 1 - 5 minutes.
Wrong PKG file format
Unpack fail

General settings > Reboot

The screenshot shows a user interface for rebooting the device. It includes a title 'Reboot' and a large 'Reboot' button.

This feature allows you to reboot the Network Camera, which takes about one minute to complete. When completed, the live video page will be displayed in your browser. The following message will be displayed during the reboot process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>
If the connection fails, please manually enter the above IP address in your browser.

If the connection fails after rebooting, manually enter the IP address of the Network Camera in the address field to resume the connection.

General settings > Restore

Restore

Restore all settings to factory default except settings in

Network Daylight saving time Custom language VADP

This feature allows you to restore the Network Camera to factory default settings.

Network: Select this option to retain the Network Type settings (please refer to Network Type on page 90).

Daylight Saving Time: Select this option to retain the Daylight Saving Time settings (please refer to Import/Export files below on this page).

Custom Language: Select this option to retain the Custom Language settings.

VADP: Retain the VADP modules (3rd-party software stored on the SD card) and related settings.

If none of the options is selected, all settings will be restored to factory default. The following message is displayed during the restoring process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>
If the connection fails, please manually enter the above IP address in your browser.

Import/Export files

This feature allows you to Export / Update daylight saving time rules, custom language file, and configuration file.

<input type="button" value="General settings"/>	<input type="button" value="Import/Export files"/>																				
<p>Export files</p> <table border="0"> <tr> <td>Export daylight saving time configuration file</td> <td><input type="button" value="Export"/></td> </tr> <tr> <td>Export language file</td> <td><input type="button" value="Export"/></td> </tr> <tr> <td>Export configuration file</td> <td><input type="button" value="Export"/></td> </tr> <tr> <td>Export server status report</td> <td><input type="button" value="Export"/></td> </tr> </table> <p>Upload files</p> <table border="0"> <tr> <td>Update daylight saving time rules:</td> <td><input type="text"/></td> <td><input type="button" value="Browse..."/></td> <td><input type="button" value="Upload"/></td> </tr> <tr> <td>Update custom language file:</td> <td><input type="text"/></td> <td><input type="button" value="Browse..."/></td> <td><input type="button" value="Upload"/></td> </tr> <tr> <td>Upload configuration file:</td> <td><input type="text"/></td> <td><input type="button" value="Browse..."/></td> <td><input type="button" value="Upload"/></td> </tr> </table>		Export daylight saving time configuration file	<input type="button" value="Export"/>	Export language file	<input type="button" value="Export"/>	Export configuration file	<input type="button" value="Export"/>	Export server status report	<input type="button" value="Export"/>	Update daylight saving time rules:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>	Update custom language file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>	Upload configuration file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>

Update daylight saving time rules:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>																		
Update custom language file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>																		
Upload configuration file:	<input type="text"/>	<input type="button" value="Browse..."/>	<input type="button" value="Upload"/>																		

Export daylight saving time configuration file: Click to set the start and end time of DST.

Follow the steps below to export:

1. In the Export files column, click **Export** to export the daylight saving time configuration file from the Network Camera.
2. A file download dialog will pop up as shown below. Click **Open** to review the XML file or click **Save** to store the file for editing.

3. Open the file with Microsoft® Notepad and locate your time zone; set the start and end time of DST. When completed, save the file.

In the example below, DST begins each year at 2:00 a.m. on the second Sunday in March and ends at 2:00 a.m. on the first Sunday in November.

```

<Day></Day>
    <weekInMonth>First</weekInMonth>
    <dayOfWeek>Sunday</dayOfWeek>
    <hour>2</hour>
</endTime>
</timeZone>
<timeZone id="-240" name="(GMT-06:00) Central Time (US and Canada)">
    <startTIme>
        <shift>-60</shift>
        <month>3</month>
        <day></day>
            <weekInMonth>Second</weekInMonth>
            <dayOfWeek>Sunday</dayOfWeek>
            <hour>2</hour>
    </startTIme>
    <endTIme>
        <shift>-60</shift>
        <month>11</month>
        <day></day>
            <weekInMonth>First</weekInMonth>
            <dayOfWeek>Sunday</dayOfWeek>
            <hour>2</hour>
    </endTIme>
</timeZone>
<timeZone id="-241" name="(GMT-06:00) Mexico City">

```

Update daylight saving time rules: Click **Browse...** and specify the XML file to update.

If incorrect date and time are assigned, you will see the following warning message when uploading the file to the Network Camera.

The Notepad window shows the same XML configuration as above, but with a red box highlighting the month values in the start and end time zones.

The browser window shows the URL <http://192.168.5.151/cgi-bin/admin/upload.cgi>. The error message is: Invalid <Month> value in TimeZone id: -240 . . .

The following message is displayed when attempting to upload an incorrect file format.

Export language file: Click to export language strings. VIVOTEK provides nine languages: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文.

Update custom language file: Click **Browse...** and specify your own custom language file to upload.

Export configuration file: Click to export all parameters for the device and user-defined scripts.

Export daylight saving time configuration file: Click **Browse...** to update a configuration file. Please note that the model and firmware version of the device should be the same as the configuration file. If you have set up a fixed IP or other special settings for your device, it is not suggested to update a configuration file.

Export server status report: Click to export the current server status report, such as time, logs, parameters, process status, memory status, file system status, network status, kernel message..., and so on.

Tips:

- If a firmware upgrade is accidentally disrupted, say, by a power outage, you still have a last resort method to restore normal operation. See the following for how to bring the camera back to work:

Applicable scenario:

- (1) Power disconnected during firmware upgrade.
- (2) Unknown reason causing abnormal LED status, and a Restore cannot recover normal working condition.

You can use the following methods to activate the camera with its backup firmware:

- (1) Press and hold down the reset button for at least one minute.
- (2) Power on the camera until the Red LED blinks rapidly.
- (3) After boot up, the firmware should return to the previous version before the camera hanged. (The procedure should take 5 to 10 minutes, longer than the normal boot-up process). When this process is completed, the LED status should return to normal.

Media > Image

This section explains how to configure the image settings of the Network Camera. It is composed of the following tabbed windows: General settings, Image settings, Exposure, and Privacy mask, and Pixel calculator.

General settings

Video title: Enter a name that will be displayed on the title bar of the live video as well as the view cell on the ST7501 and VAST recording software.

Show timestamp and video title in videos and snapshots: Enter a name that will be displayed on the title bar of the live video as the picture shown below.

Position of timestamp and video title on image: Select to display time stamp and video title on the top or at the bottom of the video stream.

Timestamp and video title font size: Select the font size for the time stamp and title.

Video font (.ttf): You can select a True Type font file for the display of textual messages on video.

Mount type: There are 3 Mount types - Ceiling, Wall, and Floor.

Ceiling: The Ceiling mount type automatically delivers upside-down images. The Ceiling mode supports the following Display modes - 1O, 1P, 1R, 2P, 1O3R, 4R, 4R PRO, and 1O8R.

Wall: The Wall mount type applies to the monitoring of long, side-to-side surveillance areas, such as when mounted on a wall facing a corridor. Different Mount types have different options with the Display mode settings. For example, the **1P2R** (1 Panoramic & 2 Regional) and **1P3R** (1 Panoramic & 3 Regional) display modes are only available when the "Wall" Mount type is applied.

Floor: The Display modes with the Floor mount type are identical to those for the Ceiling mount except that the images are not vertically flipped.

Color: Select to display color or black/white video streams.

Power line frequency: Set the power line frequency consistent with local utility settings to eliminate image flickering associated with fluorescent lights.

Video orientation: Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Select both options if the Network Camera is installed upside-down (e.g., on the ceiling) to correct the image orientation. Please note that the preset locations will be cleared after you configure the flip/mirror option.

Video orientation: Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Select both options if the Network Camera is installed upside-down (e.g., on the ceiling) to correct the image orientation. Please note that if you have preset locations, those locations will be cleared after flip/mirror setting.

Day/Night settings

Day/Night

- Switch to B/W in night mode
- Turn on external IR illuminator in night mode

IR cut filter:

Auto mode

Sensitivity:

Normal

Select auto mode will disable profile of exposure settings.

Switch to B/W in night mode

Select this checkbox to enable the Network Camera to automatically switch to Black & White display during the night mode.

IR cut filter

With a removable IR-cut filter, this Network Camera can automatically remove the filter to let Infrared light pass into the sensor during low light conditions.

- Auto mode (The **Day/Night Exposure Profile** will not be available if Auto mode is selected)
The Network Camera automatically removes the filter by judging the level of ambient light.
- Day mode
In day mode, the Network Camera switches on the IR cut filter at all times to block infrared light from reaching the sensor so that the colors will not be distorted.
- Night mode
In night mode, the Network Camera switches off the IR cut filter at all times for the sensor to accept infrared light, thus helping to improve low light sensitivity.

- Synchronize with digital input

The Network Camera automatically removes the IR cut filter when a digital input is triggered, for example, when the camera is accompanied by an external IR light that comes with its own sensor and provides a signal to the camera. Some camera housings come with such mechanism.

- Schedule mode

The Network Camera switches between day mode and night mode based on a specified schedule. Enter the start and end time for day mode. Note that the time format is [hh:mm] and is expressed in 24-hour clock time. By default, the start and end time of a day mode are set to 07:00 and 18:00.

Sensitivity

Tune the responsiveness of the IR filter to lighting conditions as Low, Normal, or High.

When completed with the settings on this page, click **Save** to enable the settings.

If you want to configure another sensor setting for a specific lighting condition in day/night/schedule mode, please click **Profile** to open the Profile settings page as shown below.

Please follow the steps below to setup a profile:

1. Check **Enable and apply this profile**.
2. Select the applied mode: **Day mode**, **Night mode**, or **Schedule mode**. Please manually enter a range of time through which you want the Schedule mode to apply.
3. Configure Exposure control settings in the folowing columns. Please refer to page 69 for detailed information.
4. Click **Save** to enable the setting and click **Close** to exit the window.

Illuminators

Turn on built-in IR illuminator in night mode

Select this to turn on the camera's onboard IR illuminator when the camera detects low light condition and enters the night mode.

Smart IR

Anti-overexposure: When enabled, the camera automatically adjusts the IR projection to adjacent objects in order to avoid over-exposure in the night mode.

The Smart IR function is more beneficial when the spot of intrusions or an object of your interest is close to the lens and the IR lights. For example, if an intruder has a chance of getting near the range of 3 meters, Smart IR can effectively reduce the over-exposure. For a surveillance area at a greater distance, e.g., 5 meters or farther away, the Smart IR function may not bring as significant benefits as in close range.

Smart IR disabled; distance: 5M

Smart IR enabled; distance: 5M

Smart IR disabled; distance: 3M

Smart IR enabled; distance: 3M

 **Tips:**

If there is an object in close proximity, the IR lights reflected back from it can mislead the Smart IR's calculation of light level. To solve this problem, you can place an "Exposure Exclude" window on an unavoidable object in the Exposure setting window. See page 73 for how to do it.

You can also configure the "Exposure Exclude" window in a night mode "Profile" setting so that your day time setting is not affected.

>Profile of exposure settings

Add inclusive window Add exclusive window

Activated period

- Enable and apply this profile to
 - Day mode
 - Night mode
 - Schedule mode

Measurement window

- Full view

- BLC

Image settings

On this page, you can tune the White balance, Image adjustment and related parameters. You can configure two sets of preferred settings: one for normal situations, the other for special situations, such as a schedule mode. Quality: select from the pull-down menu the image quality of the current live view.

White balance: Adjust the value for the best color temperature.

- Auto: This will automatically adjust the color temperature of the light in response to different light sources.

You may follow the steps below to adjust the white balance to the best color temperature.

1. Set the White balance to **Auto**.
2. Place a sheet of white paper (or a color of a cool color temperature, such as blue) in front of the lens, then allow the Network Camera to automatically adjust the color temperature.
3. Check the **Fix current value** to confirm the setting when the camera automatically measured and adjusted the white balance.

- Manual: This item allows users to manually input the R gain & B gain ratios.

Image Adjustment

- Brightness: Adjust the image brightness level, which ranges from 0% to 100%.
- Contrast: Adjust the image contrast level, which ranges from 0% to 100%.
- Saturation: Adjust the image saturation level, which ranges from 0% to 100%. You can also select **Customize** and manually enter a value.

- **Sharpness:** Adjust the image sharpness level, which ranges from 0% to 100%.
- **Gamma curve:** Adjust the image sharpness level, which ranges from 0.45 to 1, from Detailed to Contrast. You may let firmware **Optimize** your display or select the **Manual** mode, and pull the slide bar pointer to change the preferred level of Gamma correction towards higher contrast or towards the higher luminance for detailed expression for both dark and lighted areas of an image.

This option is disabled when the WDR feature is enabled.

Defog: Defog helps improve the visibility quality of captured image in poor weather conditions such as smog, fog, or smoke.

■ Noise reduction

- **Enable noise reduction:** Check to enable noise reduction in order to reduce noises and flickers in image. This applies to the onboard 3D Noise Reduction feature. Use the pull-down menu to adjust the reduction strength. Note that applying this function to the video channel will consume system computing power.

3D Noise Reduction is mostly applied in low-light conditions. When enabled in a low-light condition with fast moving objects, trails of after-images may occur. You may then select a lower strength level or disable the function.

You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the setting. You can also click on the **Profile mode** to adjust all settings above in a tabbed window for special lighting conditions at a specific period of time.

Enable to apply these settings at: Select the mode this profile to apply to: Schedule mode. Please manually enter a range of time if you choose Schedule mode. Then check **Save** to take effect.

Exposure

On this page, you can configure the Exposure measurement window, Exposure level, Exposure mode, Exposure time, Gain control, and Day/Night mode settings. Quality: select the pull-down menu to configure the image quality of the current display.

Measurement Window: This function allows users to set measurement window(s) for low light compensation. For example, where low-light objects are posed against an extremely bright background. You may want to exclude the bright sunlight shining through a building's corridor.

- Full view: Calculate the full range of view and offer appropriate light compensation.
- Custom: This option allows you to manually add customized windows as inclusive or exclusive regions. A total of 10 windows can be configured. Please refer to the next page for detailed illustration.

NOTE:

The Profile mode setting in the Exposure window will be disabled when the IR cut filter is set to the Auto mode (Media > Image > General settings window).

The inclusive window refers to the “weighted window”; the exclusive window refers to the “ignored window.” It adopts the weighed averages method to calculate the value. The inclusive windows have a higher priority. You can overlap these windows, and, if you place an exclusive window within a larger inclusive window, the exclusive part of the overlapped windows will be deducted from the inclusive window. An exposure value will then be calculated out of the remaining of the inclusive window.

- **BLC (Back Light Compensation):** This option will automatically add a “weighted region” in the middle of the window and give the necessary light compensation.
- **HLC:** (Highlight Compensation). Firmware detects strong light sources and compensates on affected spots to enhance the overall image quality. For example, the HLC helps reduce the glares produced by spotlights or headlights.

Exposure control:

- **Exposure level:** You can manually set the Exposure level, which ranges from -2.0 to +2.0 (dark to bright).
- **Flickerless:** Under some circumstances when there is a difference between the video capture frequency and local AC power frequency (NTSC or PAL), the mismatch causes color shifts or flickering images. If the above mismatch occurs, select the **Flickerless** checkbox, and the range of Exposure time (the shutter time) will be limited to a range in order to match the AC power frequency. When selected, the exposure time will be forced to stay longer than 1/120 second. For cameras that come with fixed iris lens, setting the exposure time to longer than 1/120 second may introduce too much lights to the lens. Users can use this option to observe whether the result of long exposure time is satisfactory.

You can click and drag the semi-circular pointers on the **Exposure time** and **Gain control** slide bars to specify a range of shutter time and Gain control values within which the camera can automatically tune to an optimal imaging result. For example, you may prefer a shorter shutter time to better capture moving objects, while a faster shutter reduces light and needs to be compensated by electrical brightness gains.

- **Exposure time:** you can split the round pointers on the **Exposure time** and **Gain control** slide bars into two halves and drag them on the bars to designate a range of values in which firmware can automatically adapt to. Note that Firmware will then automatically tune the Gain, Exposure time, and Iris opening within the ranges you specified. For example, in low-light condition, you may prefer a longer exposure time and more electronic gains. However, the noises in the image will also increase.

- Gain control: Tune the slide bar to set the Gain Control to the best image quality. Higher gain control value will generate a certain amount of noises, and that the gain control, lighting levels, and picture performance are closely related.

Click the **Save** button to preserve your configuration.

Note that when WDR is enabled, the exposure time and gain control are not available.

■ AE Speed Adjustment:

This function applies when you need to monitor fast changing lighting conditions. For example, the camera may need to monitor a highway lane or entrance of a parking area at night where cars passing by with their lights on can bring fast changes in light levels. The same applies if the camera is installed on a vehicle, and when it needs to adapt to fast changes of light when entering and leaving a tunnel.

AE speed adjustment

Enable AE speed adjustment

Speed level: Slow

Sensitivity: Low

■ WDR:

Enable WDR Pro: This refers to the Wide Dynamic Range function that enables the camera to capture details in a high contrast environment. Use the checkbox to enable the function, and use the slide bar to select the strength of the WDR Pro functionality, depending on the lighting condition at the installation site. You can select a higher effect when the contrast is high (between the shaded area and the light behind the objects).

Enable WDR enhanced: This function allows users to identify more image details with an extreme contrast from an object of interest with one shadowed side against a bright background, e.g., an entrance. You may select the **Enable WDR enhanced** checkbox, and then adjust the strength (low, medium, high) to reach the best image quality.

You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the settings.

If you want to configure another sensor setting for a specific lighting condition for a specific period of time in a day, please click **Profile mode** to open the Profile of exposure settings page as shown below.

Enable to apply these settings at: Manually enter a range of time during which this profile will take effect, and then check **Save** to take effect.

Please follow the steps below to configure a profile:

1. Select the **Profile mode** tab.
2. Select the applicable mode: Please manually enter a range of time if you choose the Schedule mode.
3. Configure Exposure control settings in the following columns. Please refer to previous discussions for detailed information.
4. Click **Save** to enable the setting and click **Close** to exit the page.

Normal light mode **Profile mode**

Enable to apply these settings at

Schedule mode : From 18:00 to 06:00 [hh:mm]

Exposure control

Exposure level:

Flickerless

WDR

Restore **Save**

Privacy mask

Click **Privacy Mask** to open the configuration page. On this page, you can block out certain sensitive zones to address privacy concerns.

■ To configure the privacy mask windows, follow the steps below:

1. Click **New** to add a new window. A text box will appear allowing you to enter a name for the mask.
2. Use four mouse clicks to mark a square area, which is recommended to be at least twice the size of the object (height and width) you want to cover.
3. Enter a Window Name and click **Save** to enable the setting.
4. Check **Enable privacy mask** to enable this function.

NOTE:

- Up to 5 privacy mask windows can be configured on the same screen.
- To delete a mask, use the red cross button and then click on the **Save** button.

Pixel Calculator

Click the **Add** button at the lower screen to create a pixel calculator window. Place your cursor on the window to move it to an area of your interest, and change the size of window to fit the area of interest.

Once they are drawn, the numbers of pixels on the sides of windows will appear. This allows you to calculate if your current configuration fulfills a requirement, for instance, for recognizing the faces of persons passing through a location. A facial recognition usually requires around 130 pixels per meter or higher.

The pixels thus calculated are listed at the lower screen on a per-stream basis depending on the frame size you configured for each video stream.

Take the following into consideration when using this feature:

1. Operational requirement: Identify a human or a human face.
2. Why human face? There are less variances in the size of a face than that for limbs and body. Human face is normally 16cm wide.
3. The recommended pixel number is, 40 to 80 for facial identification; or 100 pixels per foot (30.48cm)
 - 3-1. One example is a human face in retail.
 - 3-2. Another example is a doorway:
If the requirement is 100 pixels per foot, to detect a person passing through a door, the camera will have to cover 700 pixels throughout the length of a doorway. This application aims to identify a subject passing through a specific area.
4. Other factors may include that a person will move in your area of interest: The face may not always face the camera.
5. Details can be affected by weak lighting or the view angle. Therefore, higher the pixels, higher the chance you can identify the subject.
6. The pixel calculator visual tool looks like the following.

With the visual tool, you can estimate a coverage area, the distance from the subject, and place a ruler or an object of known size. You can then draw a calculator frame to cover the subject of your interest.

The calculated numbers will be listed at the lower screen. You will then understand if the current setting fulfills your requests for the number of pixels.

Media > Video

Mode

Mode Stream

- Fisheye mode (MAX 24fps)(WDR Pro)
- Fisheye mode (MAX 30fps)

When the WDR Pro feature is enabled, the maximum frame rate will be reduced to 24fps.

Stream settings

Stream

- ▶ Video settings for stream 1
- ▶ Video settings for stream 2
- ▶ Video settings for stream 3
- ▶ Video settings for stream 4

Save

Please follow the steps below to set up those settings for an individual stream:

1. Select a stream to configure its viewing region.
2. Choose a proper **Frame Size** from the drop-down list according to the size of monitored device.
3. Select the Maximum frame rate.

■ The parameters of a fixed-focal lens' multiple streams:

	Region of Interest
Stream 1	1920 X 1920 ~ 256 x 256
Stream 2	1536 X 1536 (default) ~ 256 x 256
Stream 3	512 X 512 (default) ~ 256 x 256
Stream 4	1920 X 1920 ~ 256 x 256

To begin the configuration, first select a video channel.

To change the frame size, frame rate, and other related settings, click on video settings for a video stream to its individual configuration panel.

Click the stream item to display the detailed information.

Video settings for stream 1

- Local dewarp mode: 1O
- H.265
- H.264**
- Resolution: 1920x1920
- Maximum frame rate: 24 fps
- Intra frame period: 1 S
- Smart stream III
 - Dynamic intra frame period ([Help](#))
 - Smart FPS
 - Smart codec:
- Bit rate control
 - Constrained bit rate:**
 - Target quality: Detailed
 - Maximum bit rate: 6 Mbps
 - Policy: Frame rate priority
 - Smart Q: ON
 - Fixed quality:
- JPEG

Video settings for stream 2

- Local dewarp mode: 1O
- H.265
- H.264**
- Resolution: 1536x1536
- Maximum frame rate: 24 fps
- Intra frame period: 1 S
- Smart stream III
 - Dynamic intra frame period ([Help](#))
 - Smart FPS
 - Smart codec:
- Bit rate control
 - Constrained bit rate:**
 - Target quality: Detailed
 - Maximum bit rate: 6 Mbps
 - Policy: Frame rate priority
 - Smart Q: ON
 - Fixed quality:
- JPEG

This Network Camera offers real-time H.265, H.264 and MJPEG compression standards (dual Codec) for real-time viewing.

If the **H.265** or **H.264** mode is selected, the video is streamed via RTSP protocol. There are several parameters for you to adjust the video performance:

H.265

Frame size: 1920x1920

Maximum frame rate: 30 fps

Intra frame period: 1 S

Smart stream II

- Dynamic intra frame period ([Help](#))
- smart_codec:

- constrained_bitrate:**
 - quality_upperbound: Detailed
 - Target bit rate: 6 Mbps
 - Policy: Frame rate priority
- Fixed quality:

H.264

JPEG

■ Local dewarp mode

This applies when the computing efforts for dewarping the original round-shape image need to occur on the camera itself. This may be necessary for some 3rd-party software applications. For example, instead of a 1O all-around view, the client can be configured to receive a 1R (Regional) view.

■ Frame size

You can set up different video resolutions for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality and for recognizing moving objects in the field of view.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, and 25fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, and 30fps. You can also select **Customize** and manually enter a value.

■ Intra frame period

Determine how often to plant an I frame. The shorter the duration, the more likely you will get better video quality, but at the cost of higher network bandwidth consumption. Select the intra frame period from the following durations: 1/4 second, 1/2 second, 1 second, 2 seconds, 3 seconds, and 4 seconds.

Smart stream III

- Dynamic Intra frame period

High quality motion codecs, such as H.265 or H.264, utilize the redundancies between video frames to deliver video streams at a balance of quality and bit rate.

The encoding parameters are summarized and illustrated below. The **I-frames** are completely self-referential and they are largest in size. The **P-frames** are predicted frames. The encoder refers to the previous I- or P-frames for redundant image information.

H.264/265 Frame Types

By dynamically prolonging the intervals for I-frames insertion to up to 10 seconds, the bit rates required for streaming a video can be tremendously reduced. When streaming a video of a static scene, the Dynamic Intra frame feature can save up to 53% of bandwidth. The amount of bandwidth thus saved is also determined by the activities in the field of view. If activities occur in the scene, firmware automatically shortens the I-frame insertion intervals in order to maintain image quality. In the low light or night conditions, the P-frames can have a larger size due to the noises, and hence the bandwidth saving effect is also reduced.

Streaming a typical 2MP scene normally requires 3~4Mb/s of bandwidth. With the Dynamic Intra frame function, the bandwidth for streaming a medium-traffic scene can be reduced to 2~3Mb/s, and during the no-traffic period of time, down to 500kb/s.

Dynamic Intra Frame w/
static scenes

Static scene

Dynamic Intra Frame w/
activities in scenes

Activities

With the H.265 codec in an optimal scenario and when Dynamic Intra frame is combined with the Smart Stream function, an 80% of bandwidth saving can be achieved compared with using H.264 without enabling these bandwidth-saving features.

■ Smart FPS

In a static scene, the algorithm puts old frames in queue when no motions occur in scene. When motions occur, the encoding returns to normal to deliver real-time streaming.

By queuing the old frames from a static scene, both the computing efforts and the size of P frames are reduced. It is beneficial for keeping up with the frame rate requirements.

A default frame difference threshold, 1%, is embedded in firmware for returning from Smart FPS to normal encoding when motions occur.

NOTE:

Comparing with Smart Stream II, Smart Stream III has two more configurable options: [Smart Q](#), and [Smart FPS](#).

- **Smart codec** effectively reduces the quality of the whole or the non-interested areas on a screen and therefore reduces the bandwidth consumed.

You can manually specify the video quality for the foreground and the background areas.

Slide bar to the right - higher quality in the ROI areas

Slide bar to the left - higher quality in the non-ROI areas.

Select an operation mode if Smart codec is preferred.

- **Auto tracking:** The Auto mode configures the whole screen into the non-interested area. The video quality of part of the screen returns to normal when one or more objects move in that area. The remainder of the screen where there are no moving objects (no pixel changes) will still be transmitted in low-quality format.
- **Manual:** The Manual mode allows you to configure 3 ROI windows (Region of Interest, with Foreground quality) on the screen. Areas not included in any ROI windows will be considered as the non-interested areas. The details in the ROI areas will be transmitted in a higher-quality video format.

As illustrated below, the upper screen may contain little details of your interest, while the sidewalk on the lower screen is included in an ROI window.

As the result, the lower screen is constantly displayed in high details, while the upper half is transmitted using a lower-quality format. Although the upper half is transmitted using a lower quality format, you still have an awareness of what is happening on the whole screen.

- **Hybrid:** The major difference between the “Manual” mode and the “Hybrid” mode is that:

In the “**Hybrid**” mode, any objects entering the non-interested area will restore the video quality of the moving objects and the area around them. The video quality of the associated non-interested area is immediately restored to normal to cover the moving objects.

In the “**Manual**” mode, the non-interested area is always transmitted using a low-quality format regardless of the activities inside.

Quality priority: ([Help](#))

- **Quality priority:** Use the slide bar to tune the quality contrast between the ROI and non-interested areas.

The farther the slide bar button is to the right, the higher the image quality of the ROI areas. On the contrary, the farther the slide bar button to the left, the higher the image quality of the non-interested area.

In this way, you may set up an ROI window as a privacy mask by covering a protected area using an ROI window, while the remaining screen become the non-interested area. You may then configure the non-interested area to have a high image quality, or vice versa.

You should also select the Maximum bit rate from the pull-down menu as the threshold to contain the bandwidth consumption for both the high- and low-quality video sections in a smart stream.

■ Bit rate control

Constrained bit rate:

A complex scene generally produces a larger file size, meaning that higher bandwidth will be needed for data transmission. The bandwidth utilization is configurable to match a selected level, resulting in mutable video quality performance. The bit rates are selectable at the following rates: 20Kbps, 30Kbps, 40Kbps, 50Kbps, 64Kbps, 128Kbps, 256Kbps, 512Kbps, 768Kbps, 1Mbps, 2Mbps, 3Mbps, 4Mbps, 6Mbps, 8Mbps, 10Mbps, 12Mbps, 14Mbps, ~ to 40Mbps. You can also select **Customize** and manually enter a value up to 40Mbps.

- - **Target quality:** Select a desired quality ranging from Medium to Excellent.
- **Maximum bit rate:** select a bit rate from the pull-down menu. The bit rate ranges from 20kbps to a maximum of 40Mbps. The bit rate then becomes the Average or Upper bound bit rate number. The Network Camera will strive to deliver video streams around or within the bit rate limitation you impose.
- **Policy:** If Frame Rate Priority is selected, the Network Camera will try to maintain the frame rate per second performance, while the image quality will be compromised. If Image quality priority is selected, the Network Camera may drop some video frames in order to maintain image quality.

Smart Q: Select ON or OFF to enable or disable the feature. Smart Q is scene-aware. The Smart Q reduces frame size and bit rate consumption through the following:

- Dynamically adjusting the image quality for scenes in different luminosities in low light frames. Less noises means less of the bandwidth consumed.
- Endorsing different qualities for the I frames and P frames, and hence reduces the frame size.
- Dividing a single frame into different sections, and giving these sections different qualities. For a highly complex area, such as an area with dense vegetation, screen windows, or repeated patterns (complex textiles patterns like wall paper), having a lower quality value actually poses little effects on human eyes.

Unnecessary quality is unrecognized by human eyes and wastes the bit rate.

The Smart Q streaming can save up to 50% to 80% of bandwidth in different illumination conditions while keeping the same imaging quality. These numbers come from the comparison between Smart Stream II and Smart Stream III streamings.

Fixed quality:

On the other hand, if **Fixed quality** is selected, all frames are transmitted with the same quality; bandwidth utilization is therefore unpredictable. The video quality can be adjusted to the following settings: Medium, Standard, Good, Detailed, and Excellent. You can also select **Customize** and manually enter a value.

Maximum bit rate: With the guaranteed image quality, you might still want to place a bit rate limitation to control the size of video streams for bandwidth and storage concerns. The configurable bit rate starts from 1Mbps to 40Mbps.

The Maximum bit rate setting in the Fixed quality configuration can ensure a reasonable and limited use of network bandwidth. For example, in low light conditions where a Fixed quality setting is applied, video packet sizes can tremendously increase when noises are produced with electrical gains.

You may also manually enter a bit rate number by selecting the **Customized** option.

If the **JPEG** mode is selected, the Network Camera sends consecutive JPEG images to the client, producing a moving effect similar to a filmstrip. Every single JPEG image transmitted guarantees the same image quality, which in turn comes at the expense of variable bandwidth usage. Because the media contents are a combination of JPEG images, no audio data is transmitted to the client. There are three parameters provided in MJPEG mode to control the video performance:

<input checked="" type="radio"/> JPEG	Resolution:	1920x1920
	Maximum frame rate:	10 fps
Bit rate control		
<input type="radio"/> Constrained bit rate: <input checked="" type="radio"/> Fixed quality:		
Quality:		Good
Maximum bit rate:		80 Mbps

■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality.

If the power line frequency is set to 50Hz (at the 5MP resolution), the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, and 15fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, and 15fps. You can also select **Customize** and manually enter a value. The frame rate will decrease if you select a higher resolution.

■ Video quality

Refer to the previous page setting an average or upper bound threshold for controlling the bandwidth consumed for transmitting motion jpegs. The configuration method is identical to that for H.264.

For Constant Bit Rate and other settings, refer to the previous page for details.

NOTE:

- *Video quality and fixed quality refers to the **compression rate**, so a lower value will produce higher quality.*
- *Converting high-quality video may significantly increase the CPU loading, and you may encounter streaming disconnection or video loss while capturing a complicated scene. In the event of occurrence, we suggest you customize a lower video resolution or reduce the frame rate to obtain smooth video.*

Media > Audio

Audio Settings

Audio settings

Mute

Internal microphone input gain: 70%

Audio type

G.711:

G.726 bit rate:

Mute: Select this option to disable audio transmission from the Network Camera to all clients. Note that if mute mode is turned on, no audio data will be transmitted even if audio transmission is enabled on the Client Settings page. In that case, the following message is displayed:

Internal microphone input gain: Select the gain of the internal audio input according to ambient conditions. Adjust the gain from 0% (least) to 100% (most).

External microphone input gain: (FE9382) Select the gain of the internal audio input according to ambient conditions. Adjust the gain from 0% (least) to 100% (most).

Audio type: Select audio codec as G.711 or G.726 and the bit rate.

- G.711 provides good sound quality and requires about 64Kbps. Select pcmu (μ -Law) or pcma (A-Law) mode.
- G.726 is a speech codec standard covering voice transmission at rates of 16, 24, 32, and 40kbit/s.

When completed with the settings on this page, click **Save** to enable the settings.

Network > General settings

This section explains how to configure a wired network connection for the Network Camera.

Network Type

Network type

<input checked="" type="radio"/> LAN	<input checked="" type="radio"/> Get IP address automatically <input type="radio"/> Use fixed IP address <input checked="" type="checkbox"/> Enable UPnP presentation <input type="checkbox"/> Enable UPnP port forwarding
<input type="radio"/> PPPoE	<input type="checkbox"/> Enable IPv6

Save

LAN

Select this option when the Network Camera is deployed on a local area network (LAN) and is intended to be accessed by local computers. The default setting for the Network Type is LAN. Remember to click **Save** when you complete the Network setting.

Get IP address automatically: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

Use fixed IP address: Select this option to manually assign a static IP address to the Network Camera.

Network type

<input checked="" type="radio"/> LAN	<input type="radio"/> Get IP address automatically <input checked="" type="radio"/> Use fixed IP address
	IP address: <input type="text" value="192.168.4.108"/> Subnet mask: <input type="text" value="255.255.255.0"/> Default router: <input type="text" value="192.168.4.1"/> Primary DNS: <input type="text" value="192.168.0.10"/> Secondary DNS: <input type="text" value="192.168.0.20"/> Primary WINS server: <input type="text" value="192.168.0.10"/> Secondary WINS server: <input type="text" value="192.168.0.20"/>
	<input checked="" type="checkbox"/> Enable UPnP presentation <input type="checkbox"/> Enable UPnP port forwarding
<input type="radio"/> PPPoE	<input type="checkbox"/> Enable IPv6

Save

1. You can make use of VIVOTEK Installation Wizard 2 on the software CD to easily set up the Network Camera on LAN. Please refer to Software Installation on page 21 for details.
2. Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP.

Subnet mask: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

Default router: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will fail the transmission to destinations in different subnet.

Primary DNS: The primary domain name server that translates hostnames into IP addresses.

Secondary DNS: Secondary domain name server that backups the Primary DNS.

Primary WINS server: The primary WINS server that maintains the database of computer name and IP address.

Secondary WINS server: The secondary WINS server that maintains the database of computer name and IP address.

Enable UPnP presentation: Select this option to enable UPnP™ presentation for your Network Camera so that whenever a Network Camera is presented to the LAN, shortcuts of connected Network Cameras will be listed in My Network Places. You can click the shortcut to link to the web browser. Currently, UPnP™ is supported by Windows XP or later. Note that to utilize this feature, please make sure the UPnP™ component is installed on your computer.

Enable UPnP port forwarding: To access the Network Camera from the Internet, select this option to allow the Network Camera to open ports on the router automatically so that video streams can be sent out from a LAN. To utilize of this feature, make sure that your router supports UPnP™ and it is activated.

PPPoE (Point-to-point over Ethernet)

Select this option to configure your Network Camera to make it accessible from anywhere as long as there is an Internet connection. Note that to utilize this feature, it requires an account provided by your ISP.

Follow the steps below to acquire your Network Camera's public IP address.

1. Set up the Network Camera on the LAN.
2. Go to Configuration > Event > Event settings > Add server (please refer to Add server on page 131) to add a new email or FTP server.
3. Go to Configuration > Event > Event settings > Add media (please refer to Add media on page 135). Select System log so that you will receive the system log in TXT file format which contains the Network Camera's public IP address in your email or on the FTP server.
4. Go to Configuration > Network > General settings > Network type. Select PPPoE and enter the user name and password provided by your ISP. Click **Save** to enable the setting.

5. The Network Camera will reboot.

6. Disconnect the power to the Network Camera; remove it from the LAN environment.

 **NOTE:**

- If the default ports are already used by other devices connected to the same router, the Network Camera will select other ports for the Network Camera.
- If UPnP™ is not supported by your router, you will see the following message:
Error: Router does not support UPnP port forwarding.
- Below are steps to enable the UPnP™ user interface on your computer:
Note that you must log on to the computer as a system administrator to install the UPnP™ components.

1. Go to Start, click **Control Panel**, then click **Add or Remove Programs**.

2. In the Add or Remove Programs dialog box, click **Add/Remove Windows Components**.

3. In the Windows Components Wizard dialog box, select **Networking Services** and click **Details**.

4. In the Networking Services dialog box, select **Universal Plug and Play** and click **OK**.

5. Click **Next** in the following window.

6. Click **Finish**. UPnP™ is enabled.

► How does UPnP™ work?

UPnP™ networking technology provides automatic IP configuration and dynamic discovery of devices added to a network. Services and capabilities offered by networked devices, such as printing and file sharing, are available among each other without the need for cumbersome network configuration. In the case of Network Cameras, you will see Network Camera shortcuts under My Network Places.

► Enabling UPnP port forwarding allows the Network Camera to open a secondary HTTP port on the router-not HTTP port-meaning that you have to add the secondary HTTP port number to the Network Camera's public address in order to access the Network Camera from the Internet. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

From the Internet	In LAN
http://203.67.124.123:8080	http://192.168.4.160 or http://192.168.4.160:8080

► If the PPPoE settings are incorrectly configured or the Internet access is not working, restore the Network Camera to factory default; please refer to **Restore** on page 63 for details. After the Network Camera is reset to factory default, it will be accessible on the LAN.

Enable IPv6

Select this option and click **Save** to enable IPv6 settings.

Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.5, Mozilla Firefox 3.0 or above.

Enable IPv6

IPv6 information

Manually setup the IP address

Save

When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information as shown below.

If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. The IPv6 address will be displayed as follows:

Refers to Ethernet

[eth0 address]

2001:0c08:2500:0002:0202:d1ff:fe04:65f4/64@Global

Link-global IPv6 address/network mask

fe80:0000:0000:0000:0202:d1ff:fe04:65f4/64@Link

Link-local IPv6 address/network mask

[Gateway]

fe80:211:d8ff:fea2:1a2b

[DNS]

2010:05c0:978d::

Please follow the steps below to link to an IPv6 address:

1. Open your web browser.
 2. Enter the link-global or link-local IPv6 address in the address bar of your web browser.
 3. The format should be:

[http://\[2001:0c08:2500:0002:0202:d1ff:fe04:65f4\]/](http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]/)

IPv6 address

4. Press **Enter** on the keyboard or click **Refresh** button to refresh the webpage.

For example:

NOTE:

- If you have a Secondary HTTP port (the default value is 8080), you can also link to the webpage in the following address format: (Please refer to **HTTP streaming** on page 96 for detailed information.)

[http://\[2001:0c08:2500:0002:0202:d1ff:fe04:65f4\]:8080](http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]:8080)

IPv6 address

Secondary HTTP port

- If you choose PPPoE as the Network Type, the [PPPO address] will be displayed in the IPv6 information column as shown below.

```
[eth0 address]  
fe80::0000:0000:0202:d1ff:fe11:2299/64@Link  
  
[ppp0 address]  
fe80::0000:0000:0202:d1ff:fe11:2299/10@Link  
  
2001:6100:01c0:0002:0202:d1ff:fe11:2299/64@Global  
  
[Gateway]  
fe80::90:1a00:4142:8ced  
  
[DNS]  
2001:6000::1
```

Manually setup the IP address: Select this option to manually set up IPv6 settings if your network environment does not have DHCPv6 server and router advertisements-enabled routers.

If you check this item, the following blanks will be displayed for you to enter the corresponding information:

Enable IPv6

Network > Streaming protocols

HTTP streaming

To utilize HTTP authentication, make sure that your have set a password for the Network Camera first; please refer to Security > User account on page 109 for details.

Authentication:	digest
HTTP port:	80
Secondary HTTP port:	8080
Access name for stream 1:	video1s1.jpg
Access name for stream 2:	video1s2.jpg
Access name for stream 3:	video1s3.jpg
Access name for stream 4:	video1s4.jpg

Save

Authentication: Depending on your network security requirements, the Network Camera provides two types of security settings for an HTTP transaction: basic and digest.

If **basic** authentication is selected, the password is sent in plain text format and there can be potential risks of being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm and thus provide better protection against unauthorized access.

HTTP port / Secondary HTTP port: By default, the HTTP port is set to **80** and the secondary HTTP port is set to **8080**. They can also be assigned to another port number between 1025 and 65535. If the ports are incorrectly assigned, the following warning messages will be displayed:

To access the Network Camera on the LAN, both the HTTP port and secondary HTTP port can be used to access the Network Camera. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

On the LAN
http://192.168.4.160 or http://192.168.4.160:8080

Access name for Channel # and stream #: This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source. Users can click **Media > Video > Stream settings** to set up the video quality of linked streams. For more information about how to set up the video quality, please refer to Stream settings on page 79.

When using Mozilla Firefox or Netscape to access the Network Camera and the video mode is set to **JPEG**, users will receive video comprised of continuous JPEG images. This technology, known as "server push", allows the Network Camera to feed live pictures to Mozilla Firefox and Netscape.

URL command -- **<http://<ip address>:<http port>/<access name for stream 1 ~ 4>>**

For example, when the Access name for **stream 2** is set to **video1s2.jpg**:

1. Launch Mozilla Firefox or Netscape.
2. Type the above URL command in the address bar. Press **Enter**.
3. The JPEG images will be displayed in your web browser.

! IMPORTANT:

- **Microsoft® Internet Explorer does not support server push technology; therefore, using <http://<ip address>:<http port>/<access name for stream 1 ~ 4>> will fail to access the Network Camera.**
- **Users can only use URL commands to request the stream 5. For more information about URL commands, please refer to page 163.**

RTSP Streaming

To utilize RTSP streaming authentication, make sure that you have set a password for the Network Camera first; please refer to **Security > User account** on page 109 for details.

HTTP	RTSP

Authentication: Depending on your network security requirements, the Network Camera provides three types of security settings for streaming via RTSP protocol: disable, basic, and digest.

If **basic** authentication is selected, the password is sent in plain text format, but there can be potential risks of it being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm, thus providing better protection against unauthorized access.

The availability of the RTSP streaming for the three authentication modes is listed in the following table:

	Quick Time player	VLC Player
Disable	O	O
Basic	O	O
Digest	O	X

Access name for Channel # and stream #: This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source.

If you want to use an **RTSP player** to access the Network Camera, you **HAVE TO** set the video mode to **H.265** or **264** and use the following RTSP URL command to request transmission of the streaming data.

rtsp://<ip address>:<rtsp port>/<access name for stream1 ~ 4>

For example, when the access name for **stream 1** is set to **live1s1.sdp**:

1. Launch an RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. Type the above URL command in the address field.
4. The live video will be displayed in your player as shown below.

RTSP port /RTP port for video, audio/ RTCP port for video, audio

- RTSP (Real-Time Streaming Protocol) controls the delivery of streaming media. By default, the port number is set to 554.
- The RTP (Real-time Transport Protocol) is used to deliver video and audio data to the clients. By default, the RTP port for video is set to 5556 and the RTP port for audio is set to 5558.
- The RTCP (Real-time Transport Control Protocol) allows the Network Camera to transmit the data by monitoring the Internet traffic volume. By default, the RTCP port for video is set to 5557 and the RTCP port for audio is set to 5559.

The ports can be changed to values between 1025 and 65535. The RTP port must be an even number and the RTCP port is the RTP port number plus one, and thus is always an odd number. When the RTP port changes, the RTCP port will change accordingly.

If the RTP ports are incorrectly assigned, the following warning message will be displayed:

Multicast settings for stream #1 ~ #4: Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for streams #1 ~ #4.

▼ Multicast settings for stream 1	
<input type="checkbox"/> Always multicast	
Multicast group address:	239.128.1.99
Multicast video port:	5560
Multicast RTCP video port:	5561
Multicast metadata port:	6560
Multicast RTCP metadata port:	6561
Multicast audio port:	5562
Multicast RTCP audio port:	5563
Multicast TTL [1~255]:	15
▼ Multicast settings for stream 2	
<input type="checkbox"/> Always multicast	
Multicast group address:	239.128.1.100
Multicast video port:	5564
Multicast RTCP video port:	5565
Multicast metadata port:	6564
Multicast RTCP metadata port:	6565
Multicast audio port:	5566
Multicast RTCP audio port:	5567
Multicast TTL [1~255]:	15

Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can effectively save Internet bandwidth.

The ports can be changed to values between 1025 and 65535. The multicast RTP port must be an even number and the multicast RTCP port number is the multicast RTP port number plus one, and thus is always odd. When the multicast RTP port changes, the multicast RTCP port will change accordingly.

If the multicast RTP video ports are incorrectly assigned, the following warning message will be displayed:

Multicast TTL [1~255]: The multicast TTL (Time To Live) is the value that tells the router the range a packet can be forwarded.

Initial TTL	Scope
0	Restricted to the same host
1	Restricted to the same subnetwork
32	Restricted to the same site
64	Restricted to the same region
128	Restricted to the same continent
255	Unrestricted in scope

IMPORTANT:

The Multicast metadata port is utilized by VIVOTEK VADP modules to transfer video analytics results, PTZ stream, textual data, and event messages between the camera and the client side running and observing the video analysis. If your client side computer is located outside the local network, you may need to open the associated TCP port on routers and firewall.

Network > DDNS

This section explains how to configure the dynamic domain name service for the Network Camera. DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name.

Manual setup

DDNS: Dynamic domain name service

DDNS: Dynamic domain name service

Enable DDNS:

Provider: Dyndns.org(Dynamic) ▾

Host name:

User name:

Password:

Enable DDNS: Select this option to enable the DDNS setting.

Provider: Select a DDNS provider from the provider drop-down list.

VIVOTEK offers [Safe100.net](#), a free dynamic domain name service, to VIVOTEK customers. It is recommended that you register [Safe100.net](#) to access VIVOTEK's Network Cameras from the Internet. Additionally, we offer other DDNS providers, such as Dyndns.org(Dynamic), Dyndns.org(Custom), Safe100.net, and CustomSafe100.

Note that before utilizing this function, please apply for a dynamic domain account first.

■ Safe100.net

1. In the DDNS column, select [Safe100.net](#) from the drop-down list. Click **I accept** after reviewing the terms of the Service Agreement.
2. In the Register column, fill in the Host name (xxxx.safe100.net), Email, Key, and Confirm Key, and click **Register**. After a host name has been successfully created, a success message will be displayed in the DDNS Registration Result column.

Register

Host name: WVTK.safe100.net

Email: wtk@vivotek.com

Key: Forget key

Confirm key:

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

Register

DDNS Registration Result:

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click [\[copy\]](#) to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

3. Click **Copy** and all the registered information will automatically be uploaded to the corresponding fields in the DDNS column at the top of the page as seen in the picture.

The screenshot shows two main sections: 'DDNS: Dynamic domain name service' and 'Register'.

DDNS: Dynamic domain name service

- Enable DDNS:
- Provider: Safe100.net
- Host name: WTK.safe100.net
- Email: wtk@vivotek.com
- Key: **.....**

Register

- Host name: WTK.safe100.net
- Email: wtk@vivotek.com
- Key: **.....**
- Confirm key: **.....**

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

Register

DDNS Registration Result:

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click [copy](#) to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

4. Select Enable DDNS and click **Save** to enable the setting.

■ CustomSafe100

VIVOTEK offers documents to establish a CustomSafe100 DDNS server for distributors and system integrators. You can use CustomSafe100 to register a dynamic domain name if your distributor or system integrators offer such services.

1. In the DDNS column, select CustomSafe100 from the drop-down list.
2. In the Register column, fill in the Host name, Email, Key, and Confirm Key; then click **Register**. After a host name has been successfully created, you will see a success message in the DDNS Registration Result column.
3. Click **Copy** and all for the registered information will be uploaded to the corresponding fields in the DDNS column.
4. Select Enable DDNS and click **Save** to enable the setting.

Forget key: Click this button if you have forgotten the key to Safe100.net or CustomSafe100. Your account information will be sent to your email address.

Refer to the following links to apply for a dynamic domain account when selecting other DDNS providers:

■ [Dyndns.org\(Dynamic\) / Dyndns.org\(Custom\)](http://www.dyndns.com/): visit <http://www.dyndns.com/>

Express link

Express Link is a free service provided by VIVOTEK server, which allows users to register a domain name for a network device. One URL can only be mapped to one MAC address. This service will examine if the host name is valid and automatically open a port on your router. If using DDNS, the user has to manually configure UPnP port forwarding. Express Link is more convenient and easier to set up.

Please follow the steps below to enable Express Link:

1. Make sure that your router supports UPnP port forwarding and it is activated.
2. Check **Enable express link**.
3. Enter a host name for the network device and click **Save**. If the host name has been used by another device, a warning message will show up. If the host name is valid, it will display a message as shown below.

Network > QoS (Quality of Service)

Quality of Service refers to a resource reservation control mechanism, which guarantees a certain quality to different services on the network. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications. Quality can be defined as, for instance, a maintained level of bit rate, low latency, no packet dropping, etc.

The following are the main benefits of a QoS-aware network:

- The ability to prioritize traffic and guarantee a certain level of performance to the data flow.
- The ability to control the amount of bandwidth each application may use, and thus provide higher reliability and stability on the network.

Requirements for QoS

To utilize QoS in a network environment, the following requirements must be met:

- All network switches and routers in the network must include support for QoS.
- The network video devices used in the network must be QoS-enabled.

QoS models

CoS (the VLAN 802.1p model)

IEEE802.1p defines a QoS model at OSI Layer 2 (Data Link Layer), which is called CoS, Class of Service. It adds a 3-bit value to the VLAN MAC header, which indicates the frame priority level from 0 (lowest) to 7 (highest). The priority is set up on the network switches, which then use different queuing disciplines to forward the packets.

Below is the setting column for CoS. Enter the **VLAN ID** of your switch (0~4095) and choose the priority for each application (0~7).

CoS	
<input checked="" type="checkbox"/> Enable CoS	
VLAN ID:	1
Live video:	0 ▾
Live audio:	0 ▾
Event/Alarm:	0 ▾
Management:	0 ▾

If you assign Video the highest priority level, your network switch will handle video packets first.

NOTE:

- A VLAN-capable switch (802.1p) is required. Web browsing may fail if the CoS setting is incorrect.
- Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time; they offer a “best-effort.” Users can think of CoS as a “coarsely-grained” traffic control and QoS as a “finely-grained” traffic control.
- Although CoS is simple to manage, it lacks scalability and does not offer end-to-end guarantees since it is based on L2 protocol.

QoS/DSCP (the DiffServ model)

DSCP-ECN defines QoS at Layer 3 (Network Layer). The Differentiated Services (DiffServ) model is based on packet marking and router queuing disciplines. The marking is done by adding a field to the IP header, called the DSCP (Differentiated Services Codepoint). This is a 6-bit field that provides 64 different class IDs. It gives an indication of how a given packet is to be forwarded, known as the Per Hop Behavior (PHB). The PHB describes a particular service level in terms of bandwidth, queueing theory, and dropping (discarding the packet) decisions. Routers at each network node classify packets according to their DSCP value and give them a particular forwarding treatment; for example, how much bandwidth to reserve for it.

Below are the setting options of DSCP (DiffServ Codepoint). Specify the DSCP value for each application (0~63).

QoS/DSCP

<input checked="" type="checkbox"/> Enable QoS/DSCP	
Live video:	0
Live audio:	0
Event/Alarm:	0
Management:	0

Save

Network > SNMP (Simple Network Management Protocol)

This section explains how to use the SNMP on the network camera. The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease.

- The SNMP consists of the following three key components:

1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

SNMP Configuration

Enable SNMPv1, SNMPv2c

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings.

Enable SNMPv1, SNMPv2c

SNMPv1, SNMPv2c Settings

Read/Write community:	Private
Read only community:	Public

Enable SNMPv3

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

- Security name: According to your NMS settings, choose Read/Write or Read Only and enter the community name.
- Authentication type: Select MD5 or SHA as the authentication method.
- Authentication password: Enter the password for authentication (at least 8 characters).
- Encryption password: Enter a password for encryption (at least 8 characters).

Enable SNMPv3

SNMPv3 Settings

Read/Write Security name:	Private
Authentication Type:	MD5
Authentication Password:	
Encryption Password:	
Read only Security name:	Public
Authentication Type:	MD5
Authentication Password:	
Encryption Password:	

Network > FTP

The newer firmware disabled the FTP port for security concerns. You can manually enable the FTP server service to enable the FTP function. You can disable the FTP server function when it is not in use.

FTP port: The FTP server allows the user to save recorded video clips. You can utilize VIVOTEK's Shepherd utility to upgrade the firmware via FTP server. By default, the FTP port is set to 21. It can also be assigned to another port number between 1025 and 65535.

You can FTP the camera's IP address to download videos recorded in the SD card, or use the "<http://ip/cgi-bin/admin/lctrl.cgi?cmd=search>" command to examine the recorded files on your SD card.

Bonjour

To access the camera from a Mac computer, go to Safari, click on Bonjour and select the camera from a drop-down list.

You can go to Safari > Preferences to enter your user name and password, and provide the root password the first time you access the camera. The camera main page will open in your browser.

Some later iOSes may come without the Bonjour option. Install the Discovery utility instead.

Find the Discovery (formerly Bonjour Browser) from the Mac App Store.

Discovery is a utility that displays all the Bonjour services on your local network or on Wide-Area Bonjour domains. The utility is previously called Bonjour Browser, it is now distributed on the Mac App Store.

Discovery requires macOS 10.12 or higher. For older versions of Mac OS you can download the old version of Bonjour Browser.

Bonjour Browser (obsolete)
<http://www.tildesoft.com/files/BonjourBrowser.dmg> - Version 1.5.6

Discovery for iOS
<https://itunes.apple.com/us/app/discovery-dns-sd-browser/id305441017?mt=8>

Security > User accounts

This section explains how to enable password protection and create multiple accounts.

Account management

Security > User accounts

Account management **Privilege management**

--New user--

User name: front_guard

User password: •••••••••• Medium

* At least 8 characters with no space, one alphabet character and one numeric character

Confirm user password: ••••••••••

Privilege: Operator

Delete **Add** **Update**

The administrator account name is “root”, which is permanent and can not be deleted. If you want to add more accounts in the Account management window, please apply the password for the “root” account first.

The administrator can create up to 20 user accounts.

To create a new user,

1. Click to unfold the pull-down menu. Select **New user**.
2. Enter the new user's name and password. Type the password identically in both text boxes.

Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, _, and ~.
You can use them in the password combination.

The strength of your password combination is shown on the right, use the combination of alphabetic, numeric, upper case, and lower case characters until the password strength is good enough.

3. Select the privilege level for the new user account. Click **Add** to enable the setting.

The privilege levels are listed below:

Administrator	Full control
Operator	Control DO, white-light illuminator, snapshot, and PTZ; unable to enter the camera Configuration page.
Viewer	Control DO, white-light illuminator, view, listen, PTZ, and talk through the camera interface.

Access rights are sorted by user privilege (Administrator, Operator, and Viewer). Only administrators can access the Configuration page. Although operators cannot access the Configuration page, they can use the URL Commands to get and set the value of parameters. For more information, please refer to URL Commands of the Network Camera on page 151. Viewers can only access the main page for live viewing.

Here you also can change a user's access rights or delete user accounts.

1. Select an existing account to modify.
2. Make necessary changes and click **Update** or **Delete** to enable the setting.

Privilege management

Account management	Privilege management
<input type="checkbox"/> Allow anonymous viewing	
Operator:	<input checked="" type="checkbox"/> Digital output <input checked="" type="checkbox"/> PTZ control
Viewer:	<input type="checkbox"/> Digital output <input checked="" type="checkbox"/> PTZ control
<input type="button" value="Save"/>	

Digital Output & PTZ control: You can modify the management privilege as operators or viewers. Select or de-select the checkboxes, and then click **Save** to enable the settings. If you give Viewers the privilege, Operators will also have the ability to control the Network Camera through the main page.

Allow anonymous viewing: If you select this item, any client can access the live stream without entering a User ID and Password.

Security > HTTPS (Hypertext Transfer Protocol over SSL)

This section explains how to enable authentication and encrypted communication over SSL (Secure Socket Layer). It helps protect streaming data transmission over the Internet on higher security level.

Create and Install Certificate Method

Before using HTTPS for communication with the Network Camera, a **Certificate** must be created first. There are three ways to create and install a certificate:

Create self-signed certificate

1. Select the first option.
2. Check **Enable HTTPS secure connection**, then select a connection option: "HTTP & HTTPS" or "HTTPS only".
3. Click **Create certificate** to generate a certificate.

4. The Certificate Information will automatically be displayed in the lower screen as shown below. You can click **Certificate properties** to view detailed information about the certificate.

Certificate information	
Status:	Active
Method:	Create self-signed certificate
Country:	TW
State or province:	Asia
Locality:	Asia
Organization:	VIVOTEK Inc.
Organization unit:	VIVOTEK Inc.
Common name:	www.vivotek.com
Certificate properties Remove certificate	
Save	

5. Click **Save** to preserve your configuration, and your current session with the camera will change to the encrypted connection.
6. If your web session does not automatically change to an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from “<http://>” to “<https://>” in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

<https://>

Create certificate request and install

1. Select the option from the **Method** pull-down menu.
2. Click **Create certificate** to proceed.
3. The following information will show up in a pop-up window after clicking **Create**. Then click **Save** to generate the certificate request.

4. The Certificate request window will prompt.

If you see the following Information bar, click **OK** and click on the Information bar at the top of the page to allow pop-ups.

5. Look for a trusted certificate authority, such as Symantec's VeriSign Authentication Services, that issues digital certificates. Sign in and purchase the SSL certification service. Copy the certificate request from your request prompt and paste it in the CA's signing request window. Proceed with the rest of the process as CA's instructions on their webpage.

6. Once completed, your SSL certificate should be delivered to you via an email or other means. Copy the contents of the certificate in the email and paste it in a text/HTML/hex editor/converter, such as IDM Computer Solutions' UltraEdit.

```
immediately, please dial 866.893.6565 or 650.426.5112 option 3 or send an email to internet-sales@verisign.com

Thank you for your interest in Symantec!

-----END CERTIFICATE-----
```

7. Open a new edit, paste the certificate contents, and press ENTER at the end of the contents to add an empty line.

8. Convert file format from DOS to UNIX. Open **File** menu > **Conversions** > **DOS to Unix**.

9. Save the edit using the “.crt” extension, using a file name like “CAcert.crt.”

10. Return to the original firmware session, use the **Browse** button to locate the crt certificate file, and click **Upload** to enable the certification.

11. When the certificate file is successfully loaded, its status will be stated as **Active**. Note that a certificate must have been created and installed before you can click on the “**Save**” button for the configuration to take effect.

12. To begin an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from “<http://>” to “<https://>” in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

Security > Access List

This section explains how to control access permission by verifying the client PC's IP address.

General Settings

General settings

Maximum number of concurrent streaming: [Connection management](#)

Maximum number of concurrent streaming connection(s) limited to: Simultaneous live viewing for 1~10 clients (including stream #1, #2, and #3). The default value is 10. If you modify the value and click **Save**, all current connections will be disconnected and automatically attempt to re-link (IE Explorer or Quick Time Player).

Connection management: Click this button to display the connection status window showing a list of the current connections. For example:

Refresh **Add to deny list** **Disconnect** **Close**

- IP address: Current connections to the Network Camera.
 - Elapsed time: How much time the client has been at the webpage.
 - User ID: If the administrator has set a password for the webpage, the clients have to enter a user name and password to access the live video. The user name will be displayed in the User ID column. If the administrator allows clients to link to the webpage without a user name and password, the User ID column will be empty.

There are some situations which allow clients access to the live video without a user name and password:

1. The administrator does not set up a root password. For more information about how to set up a root password and manage user accounts, please refer to Security > User account on page 109.
 2. The administrator has set up a root password, but set **RTSP Authentication** to “disable”. For more information about **RTSP Authentication**, please refer to RTSP Streaming on page 97.
 3. The administrator has set up a root password, but allows anonymous viewing. For more information about **Allow Anonymous Viewing**, please refer to page 109.

- Refresh: Click this button to refresh all current connections.
 - Add to deny list: You can select entries from the Connection Status list and add them to the Deny List to deny access. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explore or Quick Time Player). If you want to enable the denied list, please check **Enable access list filtering** and click **Save** in the first column.

- Disconnect: If you want to break off the current connections, please select them and click this button. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explorer or Quick Time Player).

Enable access list filtering: Check this item and click **Save** if you want to enable the access list filtering function.

Filter

Filter type: Select **Allow** or **Deny** as the filter type. If you choose **Allow Type**, only those clients whose IP addresses are on the Access List below can access the Network Camera, and the others cannot access. On the contrary, if you choose **Deny Type**, those clients whose IP addresses are on the Access List below will not be allowed to access the Network Camera, and the others can access.

Then you can **Add** a rule to the following Access List. Please note that the IPv6 access list column will not be displayed unless you enable IPv6 on the Network page. For more information about **IPv6 Settings**, please refer to Network > Enable IPv6 on page 94 for detailed information.

The screenshot shows the 'Filter' configuration interface. At the top left is a checkbox labeled 'Enable access list filtering'. Below it is a radio button group labeled 'Filter type' with options 'Allow' (selected) and 'Deny'. The main area contains two sections: 'IPv4 access list' and 'IPv6 access list'. Each section has a large text input field for entering IP addresses, an 'Add' button, and a 'Delete' button. The 'IPv4 access list' section is currently active.

There are three types of rules:

Single: This rule allows the user to add an IP address to the Allowed/Denied list.
For example:

The screenshot shows the 'Filter address' dialog box. It has a title bar 'Filter address'. Inside, there is a dropdown menu labeled 'Rule' with 'Single' selected. Below it is a text input field labeled 'IP address'. At the bottom are two buttons: 'OK' and 'Cancel'.

Network: This rule allows the user to assign a network address and corresponding subnet mask to the Allow/Deny List. The routing prefix is written in CIDR (Classless Inter-Domain Routing) notation. For example:

Filter address

Rule: Network

Network address / Network mask: 192.168.2.0 / 24

OK Cancel

accesses from IP address 192.168.2.x will be blocked.

For example:

- 192.168.100.14/24 represents the IPv4 address 192.168.100.14 and its associated routing prefix 192.168.100.0, or equivalently, its subnet mask 255.255.255.0 has 24 leading 1-bits.
- The IPv4 block 192.168.100.0/22 represents the 1024 IPv4 addresses from 192.168.100.0 to 192.168.103.255.

If IPv6 filter is preferred, you will be prompted by the following window. Enter the IPv6 address and the two-digit prefix length to specify the range of IP addresses in your configuration.

>Add ipv6 filter list

Filter address

Rule: Network

Network address / Network mask: _____ / _____

OK Cancel

Range: This rule allows the user to assign a range of IP addresses to the Allow/Deny List.

Note: This rule is only applied to IPv4.

For example:

Filter address

Rule: Range

IP address - IP address: 192.168.2.0 - 192.168.2.255

OK Cancel

Administrator IP address

Always allow the IP address to access this device: You can check this item and add the Administrator's IP address in this field to make sure the Administrator can always connect to the device.

Administrator IP address

Always allow the IP address to access this device

Save

Security > IEEE 802.1x

Enable this function if your network environment uses IEEE 802.1x, which is a port-based network access control. The network devices, intermediary switch/access point/hub, and RADIUS server must support and enable 802.1x settings.

The 802.1x standard is designed to enhance the security of local area networks, which provides authentication to network devices (clients) attached to a network port (wired or wireless). If all certificates between client and server are verified, a point-to-point connection will be enabled; if authentication fails, access on that port will be prohibited. 802.1x utilizes an existing protocol, the Extensible Authentication Protocol (EAP), to facilitate communication.

- The components of a protected network with 802.1x authentication:

1. Suppliant: A client end user (camera), which requests authentication.
2. Authenticator (an access point or a switch): A “go between” which restricts unauthorized end users from communicating with the authentication server.
3. Authentication server (usually a RADIUS server): Checks the client certificate and decides whether to accept the end user’s access request.

- VIVOTEK Network Cameras support two types of EAP methods to perform authentication: **EAP-PEAP** and **EAP-TLS**.

Please follow the steps below to enable 802.1x settings:

1. Before connecting the Network Camera to the protected network with 802.1x, please apply a digital certificate from a Certificate Authority (i.e., MIS of your company) which can be validated by a RADIUS server.
2. Connect the Network Camera to a PC or notebook outside of the protected LAN. Open the configuration page of the Network Camera as shown below. Select **EAP-PEAP** or **EAP-TLS** as the EAP method. In the following blanks, enter your ID and password issued by the CA, then upload related certificate(s).

IEEE 802.1x		IMPORTANT
<input checked="" type="checkbox"/> Enable IEEE 802.1x		
EAP method:	EAP-PEAP	
Identity:	<input type="text"/>	
Password:	<input type="password"/>	
CA certificate:	<input type="text"/>	<input type="button" value="Browse..."/> <input type="button" value="Upload"/>
Status:	no file	
<input type="button" value="Remove"/>		

The maximum length of password is 200 symbols.

IEEE 802.1x

Enable IEEE 802.1x

EAP method: **EAP-TLS**

Identity:

Private key password:

CA certificate:
Status: no file

Client certificate:
Status: no file

Client private key:
Status: no file

3. When all settings are complete, move the Network Camera to the protected LAN by connecting it to an 802.1x enabled switch. The devices will then start the authentication automatically.

NOTE:

► *The authentication process for 802.1x:*

1. *The Certificate Authority (CA) provides the required signed certificates to the Network Camera (the supplicant) and the RADIUS Server (the authentication server).*
2. *A Network Camera requests access to the protected LAN using 802.1X via a switch (the authenticator). The client offers its identity and client certificate, which is then forwarded by the switch to the RADIUS Server, which uses an algorithm to authenticate the Network Camera and returns an acceptance or rejection back to the switch.*
3. *The switch also forwards the RADIUS Server's certificate to the Network Camera.*
4. *Assuming all certificates are validated, the switch then changes the Network Camera's state to authorized and is allowed access to the protected network via a pre-configured port.*

Security > Miscellaneous

The embedded TrendMicro utility provides the protection against Cross-Site Request Forgery. Cross-site request forgery is also known as one-click attack or session riding and is abbreviated as CSRF. CSRF is a type of malicious exploit of a website, in this case, the camera. Unauthorized commands are transmitted from a user that the web application trusts, using the mechanism of forging a trusted user's own request with a request containing his own cookies, etc. Different ways can be used for a malicious website to transmit such commands. They can be specially-crafted image tags, hidden forms, and JavaScript XMLHttpRequests. The malicious attack can occur without users' interaction or even knowing it.

Miscellaneous

Enable Cross-Site Request Forgery(CSRF) protection.

We strongly recommend not to disable this protection. Disabling this feature will expose your camera to risks.

PTZ > PTZ settings

This section explains how to control the Network Camera's Pan/Tilt/Zoom operation.

The fisheye PTZ function allows users to move among regional views for close-up viewing. The PTZ view takes effect when the current field of view is not the round-shape original view or the panoramic view. Users can then move the view in different directions or zoom in or zoom out on the screen.

PTZ Settings

Preset positions and rotation settings

In the PTZ settings page, you can create preset positions in the hemisphere covered by the fisheye lens. A total of 20 preset positions can be configured.

Please follow the steps below to configure preset positions and arrange them in a rotational tour through different positions.

1. First select a video stream on which the PTZ settings will take place.

2. Adjust the shooting area to the desired position using the PTZ keypad, the FOV indicators, or mouse clicks on the live screen. To begin the mouse control, click on the two interactive windows. Due to the highly-sensitive mouse control, the PTZ control buttons can help fine-tune to an optimal location.
3. After you selected an area of interest, enter a name for the new position, which can contain up to forty alphabetic and numeric characters.
4. Click **Add** to enable the settings. The preset positions will be listed on the **User preset locations**. (To add more positions you wish, please repeat steps 1~3.)
5. Select the preset positions by their checkboxes.
6. Click on the move button (>>)  to move positions to the Patrol locations window.
7. You may select some or all of the imported positions as the stop points during the tour.
8. Select a preset position when you need to move to a specific place on screen.

Select a preferred **Rotate speed** or **move the preset positions** for consecutively displaying views of multiple positions. The speeds for rotating through each position on a Regional view window are shown below:

9. Click on the **Save** button to preserve your configuration.

To remove a preset position from the list, select it and click **Remove**. You can re-arrange the order of the position hop on the list using the   buttons.

Event > Event settings

This section explains how to configure the Network Camera to respond to particular situations (event). A typical application is that when a motion is detected, the Network Camera sends buffered images to an FTP server or e-mail address as notifications. Click on **Help**, there is an illustration shown in the pop-up window explaining that an event can be triggered by many sources, such as motion detection or external digital input devices. When an event is triggered, you can specify what type of action that will be performed.

Event

An event is an action initiated by a user-defined trigger source. In the **Event** column, click **Add** to open the event settings window.

- Event name: Enter a name for the event setting.
- Enable this event: Select this checkbox to enable the event setting.
- Priority: Select the relative importance of this event (High, Normal, or Low). Events with a higher priority setting will be executed first.
- Detect next motion detection or digital input after seconds: Enter the duration in seconds to pause motion detection after a motion is detected. This prevents too many events to be triggered within a short time.

Follow the steps 1~3 to arrange the three elements -- Schedule, Trigger, and Action to set an event. A total of 3 event settings can be configured.

1. Schedule

Specify the period for the event. Please select the days of the week and the time in a day (in 24-hr time format) to specify when will the event-triggering conditions take effect.

2. Trigger

This is the cause or stimulus which defines what will trigger the event. The trigger source can be configured to use the Network Camera's built-in motion detection mechanism or external digital inputs.

There are several choices of trigger sources as shown below. Select each item to display its related options.

■ Video motion detection

This option makes use of the built-in motion detection mechanism as a trigger source. To enable this function, you need to configure a Motion Detection Window first. For more information, please refer to Motion Detection on page 141 for details.

■ Periodically

This option allows the Network Camera to trigger periodically for every other defined minute. Up to 999 minutes are allowed.

■ Digital input

This option allows the Network Camera to use an external digital input device or sensor as a trigger source. Depending on your application, there are many choices with digital input devices on the market which help detect changes in temperature, vibration, sound, light, etc.

■ System boot

This option triggers the Network Camera when the power to the Network Camera is disconnected.

■ Recording notify

This option allows the Network Camera to trigger when the recording disk is full or when recording starts to overwrite older data.

■ Audio detection

A preset threshold can be configured with an external microphone as the trigger to system event. The triggering condition can be an input exceeding or falling below a threshold. Audio detection can take place as a complement to motion detection or as a method to detect activities not covered by the camera's view.

■ Camera tampering detection

This option allows the Network Camera to trigger when the camera detects that it is being tampered with. To enable this function, you need to configure the Tampering Detection option first. Please refer to page 144 for detailed information.

Camera tampering detection		
Enable	Channel	Trigger duration [10~600 seconds]
<input type="checkbox"/>	1	10 seconds
<input type="checkbox"/>	2	10 seconds

■ Manual Trigger

This option allows user to enable event triggers manually by clicking the on/off button on the homepage. Please configure 1 ~ 3 events before using this function.

■ VADP

It is presumed that you already uploaded and enabled the VADP modules before you can associate VADP triggers with an Event setting.

Click on the Set VADP Trigger button to open the VADP setup menu. The triggering conditions available with 3rd-party software modules known as VADP will be listed. Use the arrow buttons to select these triggers. Users may implant these modules for different purposes such as triggering motion detection, or applications related to video analysis, etc. Please refer to page 148 for the configuration options with VADP modules.

Once the triggers are configured, they will be listed under the VADP option.

3. Action

Define the actions to be performed by the Network Camera when a trigger is activated.

The screenshot shows the 'Event name:' field set to 'ddd'. Under 'Action', there is a section for 'Trigger digital output for:' with two entries: 'do' (checkbox) and 'Duration (seconds)' (text box) both set to '1'. There is also a checkbox for 'Backup media if the network is disconnected'. Below this are tabs for 'Server', 'Media', and 'Extra parameter'. Under 'Media', options include 'SD' (selected), 'snapshot', 'SD test', and 'View'. Under 'Extra parameter', there is a checkbox for 'Create folders by date time and hour automatically'. At the bottom are 'Add server' and 'Add media' buttons, along with 'Close' and 'Save event' buttons.

■ Trigger digital output for seconds

Select this option to turn on the digital output signals (via the DO connectors on the main assembly) when a trigger is activated. Specify the length of the trigger interval in the text box.

■ Backup media if the network is disconnected

Select this option to backup media file on SD card if the network is disconnected. Please note that this function will only apply after you set up the connection to network attached storage (NAS). For more information about how to set up network storage, please refer to page 153.

To configure an event with video recording or snapshots, it is necessary to configure/provide servers and storage media settings so that the Network Camera will know where to send the media files to when a trigger is activated.

Add server

Click **Add server** to unfold the server setting window. You can specify how the notification messages are delivered when a trigger is activated. A total of 5 server settings can be configured.

There are four choices of server types available: Email, FTP, HTTP, and Network storage. Select the item to display the detailed configuration options. You can configure either one or all of them.

Add server

Add media

Server name: Email

Server type

Email

Sender email address: Camera@vivotek.com

Recipient email address: VIVOTEK@vivotek.com

Server address: Ms.vivotek.tw

User name:

Password:

Server port: 25

This server requires a secure connection (SSL)

FTP

HTTP

Network storage

Test **Close** **Save server**

Server type - Email

Select to send the media files via email when a trigger is activated.

- Server name: Enter a name for the server setting.
- Sender email address: Enter a valid email address as the sender address.
- Recipient email address: Enter a valid email address as the recipient address.
- Server address: Enter the domain name or IP address of the email server.
- User name: Enter the user name of the email account if necessary.
- Password: Enter the password of the email account if necessary.
- Server port: The default mail server port is set to 25. You can also manually set another port.

If your SMTP server requires a secure connection (SSL), check **This server requires a secure connection (SSL)**.

To verify if the email settings are correctly configured, click **Test**. The result will be shown in a pop-up window. If successful, you will also receive an email indicating the result.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

After you set up the first event server, a new item for event server will automatically appear on the Server list. If you wish to add more server options, click **Add server**.

Server type - FTP

Select to send the media files to an FTP server when a trigger is activated.

Server name:

Server type

FTP

Server address:

Server port:

User name:

Password:

FTP folder name:

Passive mode

HTTP

Network storage

Test **Close** **Save server**

- Server name: Enter a name for the server setting.
- Server address: Enter the domain name or IP address of the FTP server.
- Server port: By default, the FTP server port is set to 21. It can also be assigned to another port number between 1025 and 65535.
- User name: Enter the login name of the FTP account.
- Password: Enter the password of the FTP account.
- FTP folder name
Enter the folder where the media file will be placed. If the folder name does not exist, the Network Camera will create one on the FTP server.

■ Passive mode

Most firewalls do not accept new connections initiated from external requests. If the FTP server supports passive mode, select this option to enable passive mode FTP and allow data transmission to pass through the firewall.

To verify if the FTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will also receive a test.txt file on the FTP server.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

Server type - HTTP

Select to send the media files to an HTTP server when a trigger is activated.

Add server Add media ▾

Server name:

Server type

Email
 FTP
 HTTP

URL:

User name:

Password:

Network storage

Test Close Save server

- Server name: Enter a name for the server setting.
- URL: Enter the URL of the HTTP server.
- User name: Enter the user name if necessary.
- Password: Enter the password if necessary.

To verify if the HTTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as below. If successful, you will receive a test.txt file on the HTTP server.

Click **Save server** to enable the settings and click **Close** to exit the Add server page.

Network storage:

Select to send the media files to a network storage location when a trigger is activated. Please refer to **NAS server** on page 153 for details.

Click **Save server** to enable the settings, then click **Close** to exit the Add server page.

- **SD Test:** Click to test your SD card. The system will display a message indicating success or failure. If you want to use your SD card for local storage, please format it before use. Please refer to page 156 for detailed information.

Add media

Click **Add media** to open the media setting window. You can specify the type of media that will be sent when a trigger is activated. A total of 5 media settings can be configured. There are three choices of media types available: Snapshot, Video Clip, and System log. Select the item to display the detailed configuration options. You can configure either one or all of them.

Media type - Snapshot

Select to send snapshots when a trigger is activated.

- Media name: Enter a name for the media setting.
- Select the stream number from which the snapshots will be taken.
- Send pre-event images
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide how many images to capture before a trigger is activated. Up to 7 images can be generated.
- Send post-event images
Enter a number to decide how many images to capture after a trigger is activated. Up to 7 images can be generated.

For example, if both the Send pre-event images and Send post-event images are set to 7, a total of 15 images are generated after a trigger is activated.

- File name prefix
Enter the text that will be appended to the front of the file name.

- Add date and time suffix to the file name. Select this option to add a date/time suffix to the file name. For example:

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

After you set up the first media server, a new column for media server will automatically display on the Media list. If you wish to add more media options, click **Add media**.

Media type - Video clip

Select to send video clips when a trigger is activated.

Media name: Video Clip

Media type

Attached media:

Snapshot

Video clip

Source: Stream 1

Pre-event recording: 0 seconds [0~9]

Maximum duration: 5 seconds [1~20]

Maximum file size: 500 Kbytes [50~8192]

File name prefix: Channel1s1_

System log

Save media Close

- Media name: Enter a name for the media setting.
- Source: Select the source of video clip from the stream number.
- Pre-event recording

The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide the duration of recording before a trigger is activated. Up to 9 seconds of video can be recorded.

■ Maximum duration

Specify the maximum recording duration in seconds. Up to 10 seconds of video can be recorded. For example, if pre-event recording is set to 5 seconds and the maximum duration is set to 10 seconds, the Network Camera continues to record for another 4 seconds after a trigger is activated.

■ Maximum file size

Specify the maximum file size allowed.

■ File name prefix

Enter the text that will be appended to the front of the file name.

For example:

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

Media type - System log

Select to send a system log when a trigger is activated.

The screenshot shows the "Add media" configuration page. At the top, there are two buttons: "Add server" and "Add media". The "Add media" button is highlighted with a blue border. Below these are fields for "Media name" and "Media type". Under "Media type", there is a section titled "Attached media:" with three radio button options: "Snapshot", "Video clip", and "System log". The "System log" option is selected and highlighted with a blue circle. At the bottom of the page are two buttons: "Save media" and "Close".

Click **Save media** to enable the settings, then click **Close** to exit the Add media page.

The screenshot shows the "Action" configuration page. At the top, there is a section titled "Action" with a "Trigger digital output for:" dropdown menu. Below this are checkboxes for "Backup media if the network is disconnected" and "Create folders by date time and hour automatically". The main part of the page is a table with columns "Server", "Media", and "Extra parameter". The rows correspond to different servers: SD, Email, FTP, HTTP, and NAS. Each row has a dropdown menu under "Media" and a "View" link. For the SD row, the dropdown is set to "----None----" and the "View" link is "SD test". For the Email row, the dropdown is set to "----None----" and the "View" link is "View". For the FTP, HTTP, and NAS rows, the dropdown is set to "----None----" and the "View" link is "View". At the bottom of the page are two buttons: "Add server" and "Add media".

- View: Click this button to open a file list window. This function is only for SD card and Network Storage. If you click **View** button of SD card, a Local storage page will pop up for you to manage recorded files on SD card. For more information about Local storage, please refer to page 156. If you click **View** button of Network storage, a file directory window will pop up for you to view recorded data on Network storage.
- Create folders by date, time, and hour automatically: If you check this item, the system will generate folders automatically by date.

The following is an example of a file destination with video clips:

Click to delete selected items

Click [20200320](#) to open the directory:

The format is: HH (24r) Click to open the file list for that hour				
< 07 08 09 10 11 12 13 14 15 16 17 >				
	file name	size	date	time
<input type="checkbox"/>	Video Clip_58.mp4	2526004	2020/03/20	07 58 28
<input type="checkbox"/>	Video Clip_59.mp4	2563536	2020/03/20	07 59 28

Below the table are three buttons: 'Delete', 'Delete all', and 'Back'. Callouts point to these buttons with the following instructions: 'Click to delete selected items', 'Click to delete all recorded data', and 'Click to go back to the previous level of the directory'.

< 07 08 09 10 11 12 13 14 15 16 17 >				
	file name	size	date	time
<input type="checkbox"/>	Video Clip_58.mp4	2526004	2020/03/20	07:58:28
<input type="checkbox"/>	Video Clip_59.mp4	2563536	2020/03/20	07:59:28

Below the table are three buttons: 'Delete', 'Delete all', and 'Back'. A callout points to the 'Delete' button with the text: 'Click to delete selected items'.

The format is: File name prefix + Minute (mm)
You can set up the file name prefix on Add media page.

Here is an example of the Event setting:

When completed the settings with steps 1~3 to arrange Schedule, Trigger, and Action of an event, click **Save event** to enable the settings and click **Close** to exit the page.

The following is an example of the Event setting page:

Event											
Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Trigger	
intru_alarm	ON	V	V	V	V	V	V	V	00:00~24:00	motion	<input type="button" value="Delete"/>
motiondetect	ON	V	V	V	V	V	V	V	00:00~24:00	motion	<input type="button" value="Delete"/>

[Help](#)

Server settings											
Name	Type	Address/Location									
False_NAS	ns	\JOCHEN-PC\False_NAS									

Media											
Available memory space: 18500KB											
Name	Type										
snapshots	snapshot	<input type="button" value="Delete"/>									

Customized script											
Name	Date	Time									
<input type="button" value="Add"/>											

When the Event Status is **ON**, once an event is triggered by motion detection, the Network Camera will automatically send snapshots via e-mail.

If you want to stop the event trigger, you can click **ON** to turn it to **OFF** status or click **Delete** to remove a previously-configured event setting.

To remove a server setting from the list, select a server name and click **Delete**. Note that only when the server setting is not being applied to an event setting can it be deleted.

To remove a media setting from the list, select a media name and click **Delete**. Note that only when the media setting is not being applied to an event setting can it be deleted.

Customized Script

This function allows you to upload a sample script (.xml file) to the webpage, which will save your time on configuring the settings. Please note that there is a limited number of customized scripts you can upload; if the current amount of customized scripts has reached the limit, an alert message will prompt. If you need more information, please contact VIVOTEK's technical support.

Customized Script

Name	Date	Time

```

Applications > Motion detection

This section explains how to configure the Network Camera to enable motion detection. A total of 5 motion detection windows can be configured.

Follow the steps below to enable motion detection:

1. Click **New** to add a new motion detection window.
2. In the Window Name text box, enter a name for the motion detection window.
 - Use 4 mouse clicks to designate a detection window. You can change the window shape by dragging the corner marks to a preferred location.
 - Drag the item size tab to change the minimum size of item to trigger an alarm. An item size box will appear in the center of screen for your reference (in semi-transparent red). An intruding object must be larger than the Item size to trigger an alarm. Change the item size according to the live view.
 - To delete a window, click the X mark on the right of the window name.
3. Define the sensitivity to moving objects by moving the Sensitivity slide bar. Note that a high sensitivity is prone to produce false alarms such as the fast changes of light (such as day/night mode switch, turning lights on/off). A movement must persist longer than 0.3 second for the motion to be detected.
4. Click **Save** to enable the settings.
5. Select **Enable motion detection** to enable this function.

For example:

The Percentage Indicator will rise or fall depending on the variation between sequential images. When motions are detected by the Network Camera and are considered to exceed the preset threshold, the red bar rises. Meanwhile, the motion detection window will be outlined in red.

Photos or videos can be captured instantly and configured to be sent to a remote server (via an Email or FTP server). For more information on how to configure an event setting, please refer to Event settings on page 127.

A green bar indicates that even though motions have been detected, the event has not been triggered because the image variations still fall under the preset threshold.

If you want to configure other motion detection settings for day/night/schedule mode (e.g., for a different lighting condition during a specific period of time), please click **Profile mode** to open the Motion Detection Profile Settings page as shown below. Another three motion detection windows can be configured on this page.

Please follow the steps below to set up a profile:

1. Create a new motion detection window, and configure the minimum item size.
2. Click the **Profile mode** tab.
3. Select the applicable Schedule mode. Please manually enter a time range.
4. Click **Save** to enable the settings and click **Close** to exit the page.

This motion detection window will also be displayed on the Event Settings page. You can go to **Event > Event settings > Trigger** to select it as a trigger source. Please refer to page 127 for detailed information.

NOTE:

► How does motion detection work?

There are two motion detection parameters: **Sensitivity** and **Min. Item Size**. As illustrated above, frame A and frame B are two sequential images. Pixel differences between the two frames are detected and highlighted in gray in which the sensitivity setting will take effect. Sensitivity is a value that expresses the sensitivity to moving objects. A higher sensitivity setting allows camera to detect slight movements while a lower sensitivity setting will neglect them.

The minimum item size is a threshold value that determines how many “alerted pixels” can trigger an event. When the size of an intruding object is larger than the minimum size, and its movement persist for 0.3 second, the motion is judged to exceed the defined threshold; and the motion window will be outlined in red. With a large minimum item size, the size of moving object in frame C is considered as smaller than the minimum item size, no motion alarm is triggered. With a smaller minimum item size, the same moving object in frame D triggers the alarm.

For applications that require a high level of security management, it is suggested to use **higher** sensitivity settings. However, a higher sensitivity level can also produce false alarms due to fast light changes when switching between the day and night modes, AE switch, turning the light on or off, etc.

Applications > DI and DO

Applications > DI and DO

Digital input

Normal status:	<input checked="" type="radio"/> High <input type="radio"/> Low
Current status:	High

Digital output

Normal status:	<input checked="" type="radio"/> Open <input type="radio"/> Grounded
Current status:	Open

Save

Digital input: Select High or Low as the Normal status for the digital input. Connect the digital input pin of the Network Camera to an external device to detect the current connection status.

Digital output: Select Grounded or Open to define the normal status for the digital output. Connect the digital output pin of the Network Camera to an external device to determine the current status.

Set up the event source as DI on **Event > Event settings > Trigger**. Please refer to page 128 for detailed information.

Applications > Tampering detection

This section explains how to set up camera tamper detection. With tamper detection, the camera is capable of detecting incidents such as **redirection**, **blocking or defocusing**, or even **spray paint**.

Camera tampering detection	
<input type="checkbox"/> Tampering detection	Trigger duration <input type="text" value="10"/> seconds [10~600]
	Trigger threshold <input type="text" value="12"/> [0~100]
<input type="checkbox"/> Image too dark detection	Trigger duration <input type="text" value="2"/> seconds [1~10]
	Trigger threshold <input type="text" value="15"/> [0~100]
<input type="checkbox"/> Image too bright detection	Trigger duration <input type="text" value="2"/> seconds [1~10]
	Trigger threshold <input type="text" value="15"/> [0~100]
<input type="checkbox"/> Image too blurry detection	Trigger duration <input type="text" value="7"/> seconds [1~10]
	Trigger threshold <input type="text" value="12"/> [0~100]
<input type="button" value="Save"/>	

Please follow the steps below to set up the camera tamper detection function:

1. Click to select the checkbox before tampering conditions: Tampering detection, Image too dark, Image too bright, and Image too blurry. Enter the tamper trigger duration. (10 sec. ~ 10 min.). The duration specifies the set of time before the tampering is considered as a real alarm. This helps avoid false alarms by short-lived changes.

The tamper alarm will be triggered only when the tampering factor (the difference between current frame and pre-saved background) exceeds the trigger threshold. Conditions such as image too dark, too bright, or too blurry (defocused) can also be configured as tampering conditions. The Trigger threshold determines how sensitive your is tamper detection setting. Lower the threshold number, easier to trigger.

Too bright: shining a flash light. The average lighting level of the scene is taken into consideration.

Too dark: covering the objective or spraying paint.

Too blurry: blurry scene can be the result of strong interference on the device, such as EMI interference.

2. You can configure Tampering Detection as a trigger element to the proactive event configurations in **Event -> Event settings -> Trigger**. For example, when the camera is tampered with, camera can be configured to send the pre- and post-event video clips to a networked storage device. Please refer to page 128 for detailed information.

Applications > Audio detection

Audio detection, along with video motion detection, is applicable in the following scenarios:

1. Detection of activities not covered by camera view, e.g., a loud input by gun shots or breaking a door/window.
2. A usually noisy environment, such as a factory, suddenly becomes quiet due to a breakdown of machines.
3. A PTZ camera can be directed to turn to a preset point by the occurrence of audio events.
4. Dark environments where video motion detection may not function well.

The red circles indicate where the audio alarms can be triggered when breaching or falling below the preset threshold.

How to configure Audio detection:

1. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the Alarm level tab to a preferred location on the slide bar.
3. Select the “Enable audio detection” checkbox and click Save to enable the feature.

NOTE:

1. Note that the volume numbers (0~100) on the side of wave diagram does not represent decibel (dB). Sound intensity level has already been mapped to preset values. You can, however, use the real-world inputs at your installation site that are shown on the wave diagram to configure an alarm level.
2. To configure this feature, you must not mute the audio in Configuration > Media > Audio. The default of the camera can be muted due to the lack of an internal microphone. An external microphone is provided by users.

You can use the **Profile** window to configure a different Audio detection setting. For example, a place can be noisy in the day time and become very quiet in the night.

1. Click on the **Enable this profile** checkbox. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the **Alarm level** tab to a preferred location on the slide bar.
3. Select the **Day**, **Night**, or **Schedule** mode check circles. You may also manually configure a period of time during which this profile will take effect.
4. Click **Save** and then click **Close** to complete your configuration.

⚠️ IMPORTANT:

- If the Alarm level and the received volume are set within a range of 20% on the wave diagram, frequent alarms will be triggered. It is recommended to set the Alarm level farther apart from the detected sound level.
- To configure and enable this feature, you **must not** configure video stream #1 into **Motion JPEG**. If an external microphone input is connected and recording of audio stream is preferred, audio stream is transmitted between camera and viewer/recording station **along with stream #1**.
- Refer to page 89 for Audio settings, and page 79 for video streaming settings.

Applications > Package management - a.k.a., VADP (VIVOTEK Application Development Platform)

The screenshot shows the VADP application management interface. It includes:

- Upload package** section: Contains fields for "Save to SD card" (checkbox), "Select file" (button), "Browse..." (button), and "Upload" (button).
- Resource status** section: Displays storage and SD card details:

storage_size:	10240 KBytes	Free size:	10240 KBytes
SD card status:	Detached		
Total size:	0 KBytes	Free size:	0 KBytes
Used size:	0 KBytes	Use (%):	0 %
- Memory status** section: Displays memory details:

Total size:	24576 KBytes	Free size:	24576 KBytes
-------------	--------------	------------	--------------
- Package list** section: A table with columns: Module name, Vendor, Version, Status, License. Buttons below include: Backup, Reload, Restore, Start, Stop.

Users can store and execute VIVOTEK's or 3rd-party software modules onto the camera's flash memory or SD card. These software modules can apply in video analysis for intelligent video applications such as license plate recognition, object counting, or as an agent for edge recording, etc.

- Once the software package is successfully uploaded, the module configuration (vadp.xml) information is displayed. When uploading a module, the camera will examine whether the module fits the predefined VADP requirements. Please contact our technical support or the vendor of your 3rd-party module for the parameters contained within.
- Users can also run VIVOTEK's VADP packages as a means to access updated functionality instead of replacing the entire firmware.
- Note that for some cameras the flash is too small to hold VADP packages. These cameras will have its "Save to SD card" checkbox selected and grayed-out for all time.
- The file system of SD card (FAT32) does not support soft (symbolic) link. It will return failure if your module tries to create soft links on SD card.

To utilize a software module, acquire the software package and click **Browse** and **Upload** buttons. The screen message for a successful upload is shown below:

To start a module, select the checkcircle in front, and click the **Start** button.

Package list

	Module name	Vendor	Version	Status	License	
<input type="radio"/>	Hello World	ABC	1.0.0	ON	yes	

Backup **Reload** **Restore** **Start** **Stop**

If you should need to remove a module, select the checkcircle in front and then click the **Stop** button. By then the module status will become **OFF**, and the **X** button will appear at the end of the row. Click on the **X** button to remove an existing module.

Package list

	Module name	Vendor	Version	Status	License	
<input checked="" type="radio"/>	Hello World	ABC	1.0.0	ON	no	

Backup **Reload** **Restore** **Start** **Stop**

When prompted by a confirm message, Click **Yes** to proceed.

Note that the actual memory consumed while operating the module will be indicated on the **Memory status** field. This helps determine whether a running module has consumed too much of system resources.

On the License page, register and activate the license for using VIVOTEK's VADP modules. You should acquire the license key elsewhere, and manually upload to the network camera.

Follow the onscreen instruction on VIVOTEK's website for the registration procedure.

The screenshot shows a user interface for managing device licenses. At the top, there are two tabs: "Status" (which is currently selected) and "License". Below the tabs, a section titled "Manual License" contains the following text: "To receive a license key for VADP application, go to <http://www.vivOTEK.com> and join the VTK member. This device's VADP number is:" followed by a code field containing "BbM79RE=OdGu1PIUEqJRFgc6sacoRs7g4PXl". Below this, there is a file upload area with the following controls: "Select file" (button), "Browse...", "No file selected.", and "Upload".

Recording > Recording settings

This section explains how to configure the recording settings for the Network Camera.

Recording Settings

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
Add										SD test		

NOTE:

1. Each Recording setting records a video stream from one channel, i.e., from a single lens module.
2. Please remember to format your SD card when used for the first time. Please refer to page 156 for detailed information.

Recording Settings

Click **Add** to open the recording setting window. On this page, you can define the adaptive recording, recording source, recording schedule, and recording capacity. A total of 2 recording settings can be configured.

Recording name:

Enable this recording

With adaptive recording ([Help](#))

Pre-event recording: seconds [0~9]

Post-event recording: seconds [0~10]

Priority:

Source:

Trigger

1. Trigger

2. Destination

Schedule

Sun Mon Tue Wed Thu Fri Sat

Always

From to [hh:mm]

Network fail

Note: To enable recording notification please configure [Event](#) first

- Recording name: Enter a name for the recording setting.
- Enable this recording: Select this option to enable video recording.
- With adaptive recording:
Select this option will activate the frame rate control according to alarm trigger. The frame control means that when there is a triggered alarm/event, the frame rate will raise up to the value you've set on the Stream setting page. Please refer to page 79 for more information.

If you enable adaptive recording on Camera A, only when an event is triggered on Camera A will the server record the streaming data in full frame rate; otherwise, it will only request the I frame data during normal monitoring, thus effectively save lots of bandwidths and storage.

NOTE:

- ▶ To enable adaptive recording, please make sure you've set up the triggering sources such as Motion Detection, DI Device, or Manual Trigger.
- ▶ When there is no alarm trigger:
 - JPEG mode: record 1 frame per second.
 - H.265/H.264 mode: record the I frame only.
- ▶ When the Intra frame period has been set to larger than >1s on Video settings page, the Intra frame period will be forced into 1s when the adaptive recording is activated.

The alarm trigger includes: motion detection and DI detection. Please refer to Event settings on page 127.

- Pre-event recording and post-event recording
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide the duration of recording before and after a trigger is activated.
- Priority: Select the relative importance of this recording (High, Normal, or Low). Recording with a higher priority setting will be executed first.
- Channel # Stream #: Select a channel and a stream under it as the recording source.

NOTE:

- ▶ To enable adaptive recording, please also **enable time shift caching stream** and **select a caching stream** on Media > Video > Stream settings. Please refer to page 79 for detailed instruction.
- ▶ To enable recording notification please configure **Event settings** first. Please refer to page 127.

Please follow steps 1~2 below to set up the recording:

1. Trigger

Select a trigger source.

- Schedule: The server will start to record files on the local storage or network attached storage (NAS).
- Network fail: Since network fail, the server will start to record files onto the local storage (SD card).

2. Destination

You can select the SD card or network storage (NAS) for the recorded video files.

NAS server

Click **Add NAS server** to open the server setting window and follow the steps below to set up:

1. Fill in the information for the access to the shared networked storage.

For example:

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the networked storage server.

3. Enter a server name.

4. Click **Save** to complete the settings and click **Close** to exit the page.

- Capacity: You can either choose the entire available space or impose a reserved space. The **Reserved space** should be of the size of at least **15MBytes**. The reserved space can be used as a safe buffer especially when the cyclic recording function is enabled, during the transaction stage when a storage space is full and the incoming streaming data is about to overwrite the previously saved videos.

- File name prefix: Enter the text that will be appended to the front of the file name.

- Enable cyclic recording: If you check this item, when the maximum capacity is reached, the oldest file will be overwritten by the latest one.

Recording file management

- Maximum duration: This determines the length of each recorded video, applicable from 1 to 60 minutes.
- Maximum file size: This determines the file size of each concluded recording. The applicable sizes range from 100 to 2000 Megabytes.
- File name prefix: Enter a name for each recorded video.

If you want to enable recording notification, please click **Event** to set up. Please refer to **Event > Event settings** on page 127 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit this page. When the system begins recording, it will send the recorded files to the network storage or SD card. The new recording name will appear on the recording page as shown below.

To remove an existing recording setting from the list, single-click to select it and click **Delete**.

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
Video	ON	V	V	V	V	V	V	V	00:00~24:00	stream1	SD	Delete

[Add](#) [SD test](#)

- **Video (Name)**: Click to open the Recording settings page to modify.
- **ON (Status)**: Click to manually adjust the Status. (**ON**: start recording; **OFF**: stop recording)
- **NAS or SD (Destination)**: Click to open the file list of recordings as shown below. For more information about folder naming rules, please refer to page 138 for details.

Storage

NOTE:

- It is recommended to turn OFF the recording activity before you remove an SD card from the camera.
- The lifespan of an SD card is limited. Regular replacement of the SD card can be necessary.
- Camera filesystem takes up several megabytes of memory space. The storage space cannot be used for recording.
- Using an SD card that already contains data recorded by another device should not be used in this camera.
- Please do not modify or change the folder names in the SD card. That may result in camera malfunctions.

Storage > SD card management

This section explains how to manage the local storage on the Network Camera. Here you can view SD card status, and implement SD card control.

SD card status

This column shows the status and reserved space of your SD card. Please remember to format the SD card when using for the first time.

SD card status

SD card status:	Detached	no SD card
Total size:	0 KBytes	Free size: 0 KBytes
Used size:	0 KBytes	Use (%): 0 %

Format

SD card status

SD card status:	Ready		
File system:	FAT32		
Total size:	15323496 KBytes	Free size:	15087976 KBytes
Used size:	235520 KBytes	Use (%):	1.537 %

SD card format

The Linux kernel EXT4 file system format applies to SD card larger than 32GB. However, if EXT4 is applied, the computers running Windows will not be able to access the contents on the SD card unless using some 3rd-party software .

SD card format

Ext4	▼
Ext4	(selected)
FAT32	

Format

SD card control

SD card control

- Enable cyclic storage
- Enable automatic disk cleanup

Maximum duration for keeping files: days

Save

- **Enable cyclic storage:** Check this item if you want to enable cyclic recording. When the maximum capacity is reached, the oldest file will be overwritten by the latest one.
- **Enable automatic disk cleanup:** Check this item and enter the number of days you wish to retain a file. For example, if you enter “7 days”, the recorded files will be stored on the SD card for 7 days.

Click **Save** to enable your settings.

Storage > NAS management

NAS Setup

Click **NAS management tab** to open the server setting window and follow the steps below to set up:

1. Fill in the information for the access to the shared networked storage.

For example:

NAS setup

Network storage location:

(For example: \\my_nas\disk\folder)

Workgroup:	<input type="text" value="vivotek"/>
User name:	<input type="text" value="rita.li"/>
Password:	<input type="password" value="*****"/> <input type="button" value=""/>

Test **Mount** **Unmount**

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the networked storage server.

3. Click **Mount** to complete the settings.

NAS control

- Minimum reserved storage space: The reserved space can be used as a safe buffer especially when the cyclic recording function is enabled, during the transaction stage when a storage space is full and the incoming streaming data is about to overwrite the previously saved videos.
- Enable cyclic storage: Allows previous recordings to be overwritten by new recordings.
- Enable automatic disk cleanup: Allows you to specify how long the recording files will be kept on the NAS storage.

Storage > Content management

This section explains how to manage the content of recorded videos on the Network Camera. Here you can search and view the records and view the searched results.

Searching and Viewing the Records

This column allows the user to set up search criteria for recorded data. If you do not select any criteria and click **Search** button, all recorded data will be listed in the **Search Results** column.

Trigger type

Backup System boot Digital input
 Motion Network fail Recording notify
 Periodically Tampering detection VADP
 Manual triggers Audio detection

Media type

Video clip Snapshot Text

Time

Search for last minute(s) hours days weeks

From: : PM

to: : PM

Search

- File attributes: Select one or more items as your search criteria.
- Trigger time: Manually enter the time range you want to search for contents created at a specific point in time.

Click **Search** and the recorded data corresponding to the search criteria will be listed in **Search Results** window.

Search Results

The following is an example of search results. There are four columns: Trigger time, Media type, Trigger type, and Locked. Click  to sort the search results in either direction.

Numbers of entries displayed on one page

Search results				
	Name	Trigger type	Starting time	Ending time
<input type="checkbox"/>	to SD	Periodically	Today at 3:45 PM	Today at 3:58 PM
<input type="checkbox"/>	to SD	Periodically	Today at 3:58 PM	--
<input type="checkbox"/>	test	Motion	Today at 3:45 PM	Today at 3:45 PM
<input type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM
<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM

10    1 / 3  

 Download  Lock/Unlock  JPEGs to AVI  Remove

 Click to open a live view

- Play: Click on a search result which will highlight the selected item. A Play window will appear on top for immediate review of the selected file.

For example:

- Download: Click on a search result to highlight the selected item in purple as shown above. Then click the **Download** button and a file download window will pop up for you to save the file.
- JPEGs to AVI: This function only applies to "JPEG" format files such as snapshots. You can select several snapshots from the list, then click this button. Those snapshots will be converted into an AVI file.

- Lock/Unlock: Select the checkbox in front of a desired search result, then click this button. The selected items will become Locked, which will not be deleted during cyclic recording. You can click again to unlock the selections.

For example:

Search results

<input type="checkbox"/>	Name	Trigger type	Starting time	Ending time
<input type="checkbox"/>	to SD	Periodically	Today at 3:45 PM	Today at 3:58 PM
<input type="checkbox"/>	to SD	Periodically	Today at 3:58 PM	--
<input checked="" type="checkbox"/>	test	Motion	Today at 3:45 PM	Today at 3:45 PM
<input checked="" type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input checked="" type="checkbox"/>	test	Motion	Today at 3:49 PM	Today at 3:49 PM
<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM
<input type="checkbox"/>	test	Motion	Today at 3:50 PM	Today at 3:50 PM

10 1 / 3

Download Lock/Unlock JPEGs to AVI Remove

Click to switch pages

- Remove: Select the desired search results, then click this button to delete the files.

Appendix

URL Commands for the Network Camera

1. Overview

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

2. Style Convention

In URL syntax and in descriptions of CGI parameters, text within angle brackets denotes content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets should also be replaced. An example of this is the description of the name for the server, denoted with <servername> in the URL syntax description below, that is replaced with the string myserver in the URL syntax example further down in the page.

URL syntax is denoted with the word "Syntax:" written in bold face followed by a box with the referenced syntax as shown below. For example, name of the server is written as <servername> and is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam.adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg
```

Description of returned data is written with "**Return:**" in bold face followed by the returned data in a box. All data is returned in HTTP format, i.e., each line is separated with a Carriage Return and Line Feed (CRLF) printed as \r\n.

Return:

```
HTTP/1.0 <HTTP code> <HTTP text>\r\n
```

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

Example: request a single snapshot image

```
http://mywebserver/cgi-bin/viewer/video.jpg
```

3. General CGI URL Syntax and Parameters

CGI parameters are written in lower-case and as one word without any underscores or other separators. When the CGI request includes internal camera parameters, these parameters must be written exactly as they are named in the camera or video server. The CGIs are organized in functionally-related directories under the cgi-bin directory. The file extension .cgi is required.

Syntax:

```
http://<servername>/cgi-bin/<subdir>[/<subdir>...]/<cgi>.<ext>
[?<parameter>=<value>[&<parameter>=<value>...]]
```

Example: Set digital output #1 to active

<http://mywebserver/cgi-bin/dido/setdo.cgi?do1=1>

4. Security Level

SECURITY LEVEL	SUB-DIRECTORY	DESCRIPTION
0	anonymous	Unprotected.
1 [view]	anonymous, viewer, dido, camctrl	1. Can view, listen, talk to camera. 2. Can control DI/DO, PTZ of the camera.
4 [operator]	anonymous, viewer, dido, camctrl, operator	Operator access rights can modify most of the camera's parameters except some privileges and network options.
6 [admin]	anonymous, viewer, dido, camctrl, operator, admin	Administrator access rights can fully control the camera's operations.
7	N/A	Internal parameters. Unable to be changed by any external interfaces.

5. Get Server Parameter Values

Note: The access right depends on the URL directory.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/anonymous/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/viewer/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/operator/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/admin/getparam.cgi? [<parameter>]
[&<parameter>...]
```

Where the *<parameter>* should be *<group>[_<name>]* or *<group>[.<name>]*. If you do not specify any parameters, all the parameters on the server will be returned. If you specify only *<group>*, the parameters of the related group will be returned.

When querying parameter values, the current parameter values are returned.

A successful control request returns parameter pairs as follows:

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <length>\r\n
\r\n
<parameter pair>
```

where *<parameter pair>* is

```
<parameter>=<value>\r\n
[<parameter pair>]
```

<length> is the actual length of content.

Example: Request IP address and its response

Request:

```
http://192.168.0.123/cgi-bin/admin/getparam.cgi?network_ipaddress
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: 33\r\n
\r\n
network.ipaddress=192.168.0.123\r\n
```

6. Set Server Parameter Values

Note: The access right depends on the URL directory.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/anonymous/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&update=<value>][&return=<return page>]

http://<servername>/cgi-bin/viewer/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&update=<value>] [&return=<return page>]

http://<servername>/cgi-bin/operator/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&update=<value>] [&return=<return page>]

http://<servername>/cgi-bin/admin/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&update=<value>] [&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
<group>_<name>	value to assigned	Assign <value> to the parameter <group>_<name>.
update	<boolean>	Set to 1 to update all fields (no need to update parameter in each group).
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

VIVOTEK

		(Note: The return page can be a general HTML file(.htm, .html) or a VIVOTEK server script executable (.vspx) file. It cannot be a CGI command or have any extra parameters. This parameter must be placed at the end of the parameter list)
--	--	---

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <length>\r\n
\r\n
<parameter pair>
```

where <parameter pair> is

```
<parameter>=<value>\r\n
[<parameter pair>]
```

Only the parameters that you set and are readable will be returned.

Example: Set the IP address of server to 192.168.0.123:

Request:

```
http://myserver/cgi-bin/admin/setparam.cgi?network\_ipaddress=192.168.0.123
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: 33\r\n
\r\n
network.ipaddress=192.168.0.123\r\n
```

7. Available parameters on the server

Valid values:

VALID VALUES	DESCRIPTION
string[<n>]	Text strings shorter than 'n' characters. The characters ",<,>,& are invalid.
string[n~m]	Text strings longer than `n` characters and shorter than `m` characters. The characters ",<,>,& are invalid.
password[<n>]	The same as string but displays'*' instead.
<integer>	Any single integer number in 32-bits. The range is -2147483648~2147483647.
<positive integer>	Any single positive integer number in 32-bits. The range is 1~ 4294967295.
<m> ~ <n>	Any number between 'm' and 'n'.
domain name[<n>]	A string limited to a domain name shorter than 'n' characters (eg. www.ibm.com).
email address [<n>]	A string limited to an email address shorter than 'n' characters (eg. joe@www.ibm.com).
<ip address>	A string limited to an IP address (eg. 192.168.1.1).
<mac address>	A string limited to contain a MAC address without hyphens or colons.
<boolean>	A boolean value of 1 or 0 represents [Yes or No], [True or False], [Enable or Disable].
<value1>, <value2>, <value3>, ...	Enumeration. Only given values are valid.
blank	A blank string.
everything inside <>	A description
integer primary key	SQLite data type. A 32-bit signed integer. The value is assigned a unique integer by the server.
<text>	SQLite data type. The value is a text string, stored using the database encoding (UTF-8, UTF-16BE or UTF-16-LE).
<coordinate>	x, y coordinate (eg. 0,0)
<window size>	window width and height (eg. 800x600)
<W,H>	The format for coordinate in 2D. W is the pixel number of width. H is the pixel number of height. EX: (176,144)
<WxH>	The format for resolution.

VIVOTEK

	<p>W is the pixel number of width. H is the pixel number of height. Ex: 1920x1080, 2048x1536</p>
--	--

NOTE: The camera should not be restarted when parameters are changed.

7.1 system

Group: **system**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
hostname	string[64]	1/6	Host name of server (Network Camera, Wireless Network Camera, Video Server, Wireless Video Server).
ledoff	<boolean>	6/6	Turn on (0) or turn off (1) all led indicators.
date	<YYYY/MM/DD>, keep, auto	6/6	Current date of system. Set to 'keep' to keep date unchanged. Set to 'auto' to use NTP to synchronize date.
time	<hh:mm:ss>, keep, auto	6/6	Current time of the system. Set to 'keep' to keep time unchanged. Set to 'auto' to use NTP to synchronize time.
datetime	<MMDDhhmmYYYY .ss>	6/6	Another current time format of the system.
ntp	<domain name>, <ip address>, <blank>	6/6	NTP server. *Do not use "skip to invoke default server" for default value.
timezoneindex	-489 ~ 529	6/6	Indicate timezone and area. -480: GMT-12:00 Eniwetok, Kwajalein -440: GMT-11:00 Midway Island, Samoa -400: GMT-10:00 Hawaii -360: GMT-09:00 Alaska -320: GMT-08:00 Las Vegas, San_Francisco, Vancouver -280: GMT-07:00 Mountain Time, Denver -281: GMT-07:00 Arizona -240: GMT-06:00 Central America, Central Time, Mexico City, Saskatchewan -200: GMT-05:00 Eastern Time, New York, Toronto -201: GMT-05:00 Bogota, Lima, Quito, Indiana -180: GMT-04:30 Caracas -160: GMT-04:00 Atlantic Time, Canada, La Paz, Santiago

daylight_enable	<boolean>	6/6	Enable automatic daylight saving time in time zone.
daylight_dstactualmode	<positive integer>	6/7	Check if current time is under daylight saving time. (Used internally)
daylight_auto_begintime	string[19]	6/7	Display the current daylight saving start time.
daylight_auto_endtime	string[19]	6/7	Display the current daylight saving end time.
daylight_timezones	string	6/6	List time zone index which support daylight saving time.
updateinterval	0, 3600, 86400, 604800, 2592000	6/6	0 to Disable automatic time adjustment, otherwise, it indicates the seconds between NTP automatic update intervals.
restore	0, <positive integer>	7/6	Restore the system parameters to default values after <value> seconds.
reset	0, <positive integer>	7/6	Restart the server after <value> seconds if <value> is non-negative.
restoreexceptnet	0, <positive integer>	7/6	Restore the system parameters to default values except (ipaddress, subnet, router, dns1, dns2, pppoe). This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.
restoreexceptdst	0, <positive integer>	7/6	Restore the system parameters to default values except all daylight saving time settings. This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to default values except for a union of combined results.
restoreexceptlang	0, <positive integer>	7/6	Restore the system parameters to default values except the custom language file the

			<p>user has uploaded.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p>
restoreexceptvadp	0, <positive integer>	7/6	<p>Restore the system parameters to default values except the vadp parameters and VADP modules that stored in the system.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p>
restoreexceptfocusvalue	0, <positive integer>	7/6	<p>Restore the system parameters to default values except zoom and focus value.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p> <p>* Only available when "capability_image_c<n>_remotefocus" != 0.</p>

7.1.1 system.info

Subgroup of **system: info** (The fields in this group are unchangeable.)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
modelname	string[40]	0/7	Internal model name of the server
extendedmodelname	string[40]	0/7	ODM specific model name of server (eg. DCS-5610). If it is not an ODM model, this field will be equal to "modelname"
serialnumber	<mac address>	0/7	12 characters MAC address (without hyphens).
firmwareversion	string[40]	0/7	Firmware version, including model, company, and version number in the format:<MODEL-BRAND-VERSION>
language_count	<positive integer>	0/7	Number of webpage languages available on the server.
language_i<0~(count-1)>	string[16] language_i0 : English language_i1 : Deutsch language_i2 : Español language_i3 : Français language_i4 : Italiano language_i5 : 日本語 language_i6 : Português language_i7 : 简体中文 language_i8 : 繁體中文	0/7	Available language lists.
customlanguage_maxcount	0,<positive integer>	0/6	Maximum number of custom languages supported on the server.
customlanguage_count	0,<positive integer>	0/6	Number of custom languages which have been uploaded to the server.
customlanguage_i<0~(ma	string	0/6	Custom language name.

di_i<0~(capability_ndi-1)> <product dependent>	<boolean>	1/7	0 => Inactive, normal 1 => Active, triggered (capability.ndi > 0)
do_i<0~(capability_ndo-1)> <product dependent>	<boolean>	1/7	0 => Inactive, normal 1 => Active, triggered (capability.ndo > 0)
onlinenum_rtsp	0,<positive integer>	6/7	Current number of RTSP connections.
onlinenum_httppush	0,<positive integer>	6/7	Current number of HTTP push server connections.
onlinenum_sip	0,<positive integer>	6/7	Current number of SIP connections.
eth_i0	<string>	1/7	Get network information from mii-tool.
vi_i<0~(capability_nvi-1)> <product dependent>	<boolean>	1/7	Virtual input 0 => Inactive 1 => Active (capability.nvi > 0)

7.3 digital input behavior define

Group: **di_i<0~(n-1)>** for n is the value of "capability_ndi" (**capability.ndi > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
normalstate	high, low	1/1	Indicates open circuit or closed circuit (inactive status)

7.4 digital output behavior define

Group: **do_i<0~(n-1)>** for n is the value of "capability_ndo" (**capability.ndo > 0**)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
normalstate	open, grounded	1/1	Indicate open circuit or closed circuit (inactive status)

7.5 security

Group: security

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
privilege_do	view, operator, admin	1/6	Indicate which privileges and above can control digital output (capability.ndo > 0)
privilege_camctrl	view, operator, admin	1/6	Indicate which privileges and above can control PTZ (capability.ptzenabled > 0 or capability.eptz > 0)
user_i0_name	string[64]	6/7	User name of root
user_i<1~20>_name	string[64]	6/7	User name
user_i0_pass	password[64]	6/6	Root password
user_i<1~20>_pass	password[64]	7/6	User password
user_i0_privilege	view, operator, admin	6/7	Root privilege
user_i<1~20>_privilege	view, operator, admin	6/6	User privilege

7.6 network

Group: **network**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
preprocess	<positive integer>	6/6	<p>An 32-bit integer, each bit can be set separately as follows:</p> <p>Bit 0 => HTTP service; Bit 1=> HTTPS service; Bit 2=> FTP service; Bit 3 => Two way audio and RTSP Streaming service;</p> <p>To stop service before changing its port settings. It's recommended to set this parameter when change a service port to the port occupied by another service currently. Otherwise, the service may fail.</p> <p>Stopped service will auto-start after changing port settings.</p> <p>Ex:</p> <p>Change HTTP port from 80 to 5556, and change RTP port for video from 5556 to 20480. Then, set preprocess=9 to stop both service first.</p> <p>"/cgi-bin/admin/setparam.cgi? network_preprocess=9&network_http_port=5556& network_rtp_videoport=20480"</p>
type	lan, pppoe	6/6	Network connection type.
resetip	<boolean>	6/6	<p>1 => Get ipaddress, subnet, router, dns1, dns2 from DHCP server at next reboot. 0 => Use preset ipaddress, subnet, rounter, dns1, and dns2.</p>
ipaddress	<ip address>	6/6	IP address of server.
subnet	<ip address>	6/6	Subnet mask.
router	<ip address>	6/6	Default gateway.
dns1	<ip address>	6/6	Primary DNS server.

dns2	<ip address>	6/6	Secondary DNS server.
wins1	<ip address>	6/6	Primary WINS server.
wins2	<ip address>	6/6	Secondary WINS server.

7.6.1 802.1x

Subgroup of **network: ieee8021x** (capability.protocol.ieee8021x > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable IEEE 802.1x
eapmethod	eap-peap, eap-tls	6/6	Selected EAP method
identity_peap	string[64]	6/6	PEAP identity
identity_tls	string[64]	6/6	TLS identity
password	string[200]	6/6	Password for TLS
privatekeypassword	string[200]	6/6	Password for PEAP
ca_exist	<boolean>	6/6	CA installed flag
ca_time	0,<positive integer>	6/7	CA installed time. Represented in EPOCH
ca_size	0,<positive integer>	6/7	CA file size (in bytes)
certificate_exist	<boolean>	6/6	Certificate installed flag (for TLS)
certificate_time	0,<positive integer>	6/7	Certificate installed time. Represented in EPOCH
certificate_size	0,<positive integer>	6/7	Certificate file size (in bytes)
privatekey_exist	<boolean>	6/6	Private key installed flag (for TLS)
privatekey_time	0,<positive integer>	6/7	Private key installed time. Represented in EPOCH
privatekey_size	0,<positive integer>	6/7	Private key file size (in bytes)

7.6.2 QOS

Subgroup of **network: qos_cos** (capability.protocol.qos.cos > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable CoS (IEEE 802.1p)
vlanid	1~4095	6/6	VLAN ID
video	0~7	6/6	Video channel for CoS
audio <product dependent>	0~7	6/6	Audio channel for CoS (capability.naudioin > 0)
eventalarm	0~7	6/6	Event/alarm channel for CoS
management	0~7	6/6	Management channel for CoS
eventtunnel	0~7	6/6	Event/Control channel for CoS

Subgroup of **network: qos_dscp** (capability.protocol.qos.dscp > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable/disable DSCP
video	0~63	6/6	Video channel for DSCP
audio	0~63	6/6	Audio channel for DSCP (capability.naudioin > 0)
eventalarm	0~63	6/6	Event/alarm channel for DSCP
management	0~63	6/6	Management channel for DSCP
eventtunnel	0~63	6/6	Event/Control channel for DSCP

7.6.3 IPV6

Subgroup of **network: ipv6** (capability.protocol.ipv6 > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable IPv6.
addonipaddress	<ip address>	6/6	IPv6 IP address.
addonprefixlen	0~128	6/6	IPv6 prefix length.
addonrouter	<ip address>	6/6	IPv6 router address.
addondns	<ip address>	6/6	IPv6 DNS address.
allowoptional	<boolean>	6/6	Allow manually setup of IP address setting.

7.6.4 FTP

Subgroup of **network: ftp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	21, 1025~65535	6/6	Local ftp server port.

7.6.5 HTTP

Subgroup of **network: http**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	80, 1025 ~ 65535	1/6	HTTP port.
alternateport	1025~65535	6/6	Alternate HTTP port.
authmode	basic, digest	1/6	HTTP authentication mode.
s<0~(capability_nmediastream-1)>_accessname <product dependent>	string[32]	1/6	Http server push access name for stream N, N= 1~ capability.nmediastream. (capability.protocol.spush_mjpeg =1 and capability.nmediastream > 0) The value are shown as video.mjpg = s0_accessname, (stream1) video2.mjpg = s1_accessname, (stream2) video3.mjpg = s2_accessname, (stream3) video4.mjpg = s3_accessname, (stream4) etc.
anonymousviewing	<boolean>	1/6	Enable anonymous streaming viewing.

7.6.6 HTTPS port

Subgroup of **network: https** (capability.protocol.https > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	443, 1025 ~ 65535	1/6	HTTPS port.

7.6.7 RTSP

Subgroup of **network: rtsp** (capability.protocol.rtsp > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	554, 1025 ~ 65535	1/6	RTSP port. (capability.protocol.rtsp=1)
anonymousviewing	<boolean>	1/6	Enable anonymous streaming viewing.
authmode	disable, basic, digest	1/6	RTSP authentication mode. (capability.protocol.rtsp=1)
s<0~(capability_nmediastream-1)>_accessname <product dependent>	string[32]	1/6	RTSP access name for stream N, N= 1~ capability.nmediastream. (capability.protocol.spush_mjpeg =1 and capability.nmediastream > 0) The value are shown as live.sdp = s0_accessname, (stream1) live2.sdp = s1_accessname, (stream2) live3.sdp = s2_accessname, (stream3) live4.sdp = s3_accessname, (stream4) etc.

7.6.7.1 RTSP multicast

Subgroup of network_rtsp_s<0~(n-1)>: multicast n is stream count

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
alwaysmulticast	<boolean>	4/4	Enable always multicast.
ipaddress	<ip address>	4/4	Multicast IP address.
videoport	1025 ~ 65535	4/4	Multicast video port.
audioport <product dependent>	1025 ~ 65535	4/4	Multicast audio port. (capability.naudioin > 0)
metadataport	1026~65534	4/4	Multicast metadata port.
ttl	1 ~ 255	4/4	Multicast time to live value.

7.6.8 SIP port

Subgroup of **network: sip** (capability.protocol.sip> 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
port	1025 ~ 65535	1/6	SIP port.

7.6.9 RTP port

Subgroup of **network: rtp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
videoport	1025 ~ 65535	6/6	Video channel port for RTP. (capability.protocol.rtp_unicast=1)
audioport	1025 ~ 65535	6/6	Audio channel port for RTP. (capability.protocol.rtp_unicast=1)
metadataport	1025 ~ 65535	6/6	Metadata channel port for RTP.

7.6.10 PPPoE

Subgroup of **network: pppoe** (capability.protocol.pppoe > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
user	string[128]	6/6	PPPoE account user name.
pass	password[64]	6/6	PPPoE account password.

7.7 IP Filter

Group: ipfilter

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable access list filtering.
admin_enable	<boolean>	6/6	Enable administrator IP address.
admin_ip	string[43]	6/6	Administrator IP address.
maxconnection	1~10	6/6	Maximum number of concurrent streaming connection(s).
type	0, 1	6/6	Ipfilter policy : 0 => allow 1 => deny
ipv4list_i<0~9>	Single address: <ip address> Network address: <ip address / network mask> Range address:<start ip address - end ip address>	6/6	IPv4 address list.
ipv6list_i<0~9>	string[43]	6/6	IPv6 address list.

7.8 Video input

Group: **videoin**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cmosfreq	50, 60	4/4	CMOS frequency. (capability.videoin.type=2)
whitebalance <product dependent>	auto, manual, rbgain, widerange, outdoor, indoor, sodiumauto, etc (Available values are listed in "capability_image_c <n>_wbmode")	4/4	Modes of white balance. "auto" : Auto white balance "rbgain" : Use rgain and bgain to set white balance manually. "manual" : 2 cases: a. if "rbgain" is not supported, this means keep current white balance status. b. if "rbgain" is supported, "rgain" and "bgain" are updated to the current values which is got from white balance module. Then, act as rbgain mode "widerange" : Auto Tracing White balance (2000K to 10000K). "outdoor" : auto white balance mode specifically for outdoor. "indoor" : auto white balance mode specifically for indoor. "sodiumauto" : sodium vapor lamps. * Only available when "capability_image_c<n>_wbmode" != "-"
exposurelevel	0~12	4/4	Exposure level "0,12": This range takes the concept from DC's exposure tuning options. The definition is: 0: EV -2.0 1: EV -1.7 2: EV -1.3 3: EV -1.0 4: EV -0.7 5: EV -0.3 6: EV 0 7: EV +0.3

VIVOTEK

			8: EV +0.7 9: EV +1.0 10: EV +1.3 11: EV +1.7 12: EV +2.0
irismode	fixed, indoor, outdoor <product independent>	4/4	Control DC-Iris mode. " outdoor ": Auto-setting DC-Iris to get best quality, but easy to meet rolling or flicker effect in indoor environment. " indoor ": Avoid rolling and flicker effect first. " fixed * Only available when "capability_image_c<n>_iristype"=dciris
enableblc <Not support anymore>	<boolean>	4/4	Enable backlight compensation. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a. * It's recommended to use "exposurewin_c<n>_mode" to switch on/off BLC.
color	0, 1	4/4	0 =>monochrome 1 => color
flip	<boolean>	4/4	Flip the image.
mirror	<boolean>	4/4	Mirror the image.
rotate	0,90,180,270	1/4	The rotation angle of image. Support only in Rotation mode (capability.videoin.c<n>.rotation=1)
ptzstatus	0,<positive integer>	1/7	A 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; 0(not support), 1(support) Bit 1 => Built-in or external camera; 0 (external), 1(built-in) Bit 2 => Support pan operation; 0(not support), 1(support) Bit 3 => Support tilt operation; 0(not support), 1(support) Bit 4 => Support zoom operation; 0(not support), 1(support)

			Bit 5 => Support focus operation; 0(not support), 1(support)(SD/PZ/IZ series only)
text	string[64]	1/4	Enclose caption.
imprinttimestamp	<boolean>	4/4	Overlay time stamp on video.
minexposure <product dependent>	<1~32000>, <5~32000>, <1~8000>, <5~8000>, etc. * Available value is listed in "capability_image_c<n>_exposure_minrange"	4/4	Minimum exposure time 1~32000 => 1s ~ 1/32000s 5~32000 => 1/5s ~ 1/32000s 1~8000 => 1s ~ 1/8000s 5~8000 => 1/5s ~ 1/8000s etc. * Only available when "capability_image_c<n>_exposure_minrange" != "-" * Only valid when "piris_mode"=manual or "irismode"=fixed * Only available when "capability_image_c<n>_exposure_rangetype" is "twovalues".
maxexposure <product dependent>	<1~32000>, <5~32000>, <1~8000>, <5~8000>, etc. * Available value is listed in "capability_image_c<n>_exposure_maxrange"	4/4	Maximum exposure time 1~32000 => 1s ~ 1/32000s 5~32000 => 1/5s ~ 1/32000s 1~8000 => 1s ~ 1/8000s 5~8000 => 1/5s ~ 1/8000s etc. * This parameter may also restrict image frame rate from sensor due to sensor generates a frame per exposure time. Ex: If this is set to 1/5s ~ 1/8000s and camera takes 1/5s on the night, then sensor only outputs 5 frame/s. * Only available when "capability_image_c<n>_exposure_maxrange" != "-" * Only valid when "piris_mode"=manual or "irismode"=fixed * Only available when

			"capability_image_c<n>_exposure_rangetyp e" is "twovalues".
enablepreview	<boolean>	1/4	Usage for UI of exposure settings. Preview settings of video profile.

7.8.1 Video input setting per channel

Group: **videoin_c<0~(n-1)>** for n channel products, and m is stream number

n denotes the value of "capability_nvdeooin", m denotes the value of "capability_nmmediastream"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cmosfreq	50, 60	4/4	CMOS frequency. (capability.videoin.type=2)
mode	0 ~ "capability_videoin_c<n>_nmode"-1	4/4	Indicate the video mode on use.
whitebalance <product dependent>	auto, manual, rbgain, widerange, outdoor, indoor, sodiumauto, etc (Available values are listed in "capability_image_c<n>_wbmode")	4/4	Modes of white balance. "auto" : Auto white balance "rbgain" : Use rgain and bgain to set white balance manually. "manual" : 2 cases: a. if "rbgain" is not supported, this means keep current white balance status. b. if "rbgain" is supported, "rgain" and "bgain" are updated to the current values which is got from white balance module. Then, act as rbgain mode "widerange" : Auto Tracing White balance (2000K to 10000K). "outdoor" : auto white balance mode specifically for outdoor. "indoor" : auto white balance mode specifically for indoor. "sodiumauto" : sodium vapor lamps. * Only available when "capability_image_c<n>_wbmode" != "_"
rgain	0~100	4/4	Manual set rgain value of gain control setting.

			<p>0: Weak <-> 100: Strong</p> <p>* Only available when "rbgain" is listed in "capability_image_c<n>_wbmode".</p> <p>* Only valid when "videoin_c<n>_whitebalance" != auto</p> <p>* Normalized range.</p>
bgain	0~100	4/4	<p>Manual set bgain value of gain control setting.</p> <p>0: Weak <-> 100: Strong</p> <p>* Only available when "rbgain" is listed in "capability_image_c<n>_wbmode".</p> <p>* Only valid when "videoin_c<n>_whitebalance" != auto</p> <p>* Normalized range.</p>
exposurelevel	0~12	4/4	<p>Exposure level</p> <p>"0,12": This range takes the concept from DC's exposure tuning options.</p> <p>The definition is:</p> <p>0: EV -2.0 1: EV -1.7 2: EV -1.3 3: EV -1.0 4: EV -0.7 5: EV -0.3 6: EV 0 7: EV +0.3 8: EV +0.7 9: EV +1.0 10: EV +1.3 11: EV +1.7 12: EV +2.0</p>
exposuremode <product dependent>	auto, shutterpriority, irispriority, manual, etc (Available options are list in	4/4	<p>Select exposure mode.</p> <p>"auto": Iris, Gain and Shutter Speed(Exposure time) can be set automatically.</p> <p>"shutterpriority": Adjust with variable Shutter Speed, auto Iris and</p>

VIVOTEK

	"capability_image_c<n>_exposure_modetype")		<p>Gain.</p> <p>"irispriority": Adjust with variable Iris, auto Gain and Shutter speed.</p> <p>"manual": Adjust with variable Shutter, Iris and Gain.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0302a.</p>
irismode	fixed, indoor, outdoor <product dependent>	4/4	<p>Control DC-Iris mode.</p> <p>"outdoor": Auto-setting DC-Iris to get best quality, but easy to meet rolling or flicker effect in indoor environment.</p> <p>"indoor": Avoid rolling and flicker effect first.</p> <p>"fixed": Open the iris to maximum.</p> <p>* Only available when "capability_image_c<n>_iristype"=dciris</p>
piris_mode <product dependent>	manual, indoor, outdoor,-	1/4	<p>Control P-Iris mode.</p> <p>"outdoor": Auto-setting P-Iris to get best quality, but easy to meet rolling or flicker effect in indoor environment.</p> <p>"indoor": Avoid rolling and flicker effect first.</p> <p>"manual": Manual set P-Iris by "piris_position".</p> <p>"-": not support. (only available when "capability_image_c<0~(n-1)>_sensortype" is "smartsensor")</p> <p>* Only available when "capability_image_c<n>_iristype"=piris</p>
piris_position <product dependent>	1~100	1/4	<p>Manual set P-Iris.</p> <p>1: Open <-> 100: Close</p> <p>* Only valid when "piris_mode"=manual or "capability_image_c<0~(n-1)>_sens</p>

7.13 Audio input per channel

Group: **audioin_c<0~(n-1)>** for n channel products (**capability.naudioin>0**)

n denotes the value of "capability_nvvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
source <Not recommended to use this>	micin, linein <product dependent>	4/4	<p>micin => use built-in microphone input.</p> <p>linein => use external microphone input.</p> <p>* Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a.</p> <p>* We replace "source" with "input". More details, please refer the parameter description of "input".</p>
input	intmic, extmic <product dependent>	4/4	<p>intmic: Internal (built-in) microphone. (Only available when capability_audio_intmic = 1)</p> <p>extmic: External microphone input. (Only available when capability_audio_extmic =1)</p> <p>* Note: If physical microphone switch is showed on product, this value is updated during booting to fit switch status.</p>
volume_internal	0~100	4/4	<p>Volume when take internal microphone as input source.</p> <p>0: Minimum 100: Maximum</p> <p>* Only available when the channel supports internal microphone (The related bit of "capability_audio_intmic" is equal to 1).</p>
volume_external	0~100	4/4	<p>Volume when take external microphone as input source.</p> <p>0: Minimum 100: Maximum</p> <p>* Only available when the channel supports</p>

			external microphone (The related bit of "capability_audio_extmic" is equal to 1).
mute	0, 1	1/4	0: Mute off 1: Mute on
gain <Not recommended to use this>	0~100	4/4	<p>Gain of input. (audioin_c<0~(n-1)>_source = linein)</p> <p>* Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a.</p> <p>* We replace "gain" with "volume_internal" and "volume_external". More details, please refer the parameter description of "volume_internal" and "volume_external".</p>
boostmic <Not recommended to use this>	0~100	4/4	<p>Enable microphone boost.</p> <p>Gain of input. (audioin_c<0~(n-1)>_source = micin)</p> <p>* Reserved for compatibility, and suggest don't use this since the version number (httpversion) is equal or greater than 0301a.</p> <p>* We replace "boostmic" with "volume_internal" and "volume_external". More details, please refer the parameter description of "volume_internal" and "volume_external".</p>
s0_codectype	aac4, gamr, g711, g726 (Available codec are listed in "capability_audioin_codec")	4/4	<p>Set audio codec type for input.</p> <p>aac4: Advanced Audio Coding (AAC) gamr: Adaptive Multi-Rate (AMR) g711: G.711 g726: G.726</p>
s0_aac4_bitrate	16000, 32000, 48000, 64000, 96000, 128000	4/4	<p>Set AAC4 bitrate in bps.</p> <p>* Only available if AAC is supported.</p>
s0_gamr_bitrate	4750,	4/4	AMR encoded bitrate in bps.

VIVOTEK

	5150, 5900, 6700, 7400, 7950, 10200, 12200		* Only available if AMR is supported.
s0_g711_mode	pcmu, pcma	4/4	Set G.711 companding algorithm. pcmu: μ-law algorithm pcma: A-law algorithm * Only available if G.711 is supported.
s0_g726_bitrate	16000, 24000, 32000, 40000	4/4	Set G.726 encoded bitrate in bps. * Only available if G.726 is supported.
s0_g726_bitstreampackin gmode	little, big	4/4	Set G.726 bit streaming packing mode. little: Little-endian bitstream format. big: Big-endian bitstream format. * Only available if G.726 is supported.
s0_g726_vlcmode	0, 1	4/4	Enable vlcmode for G.726. 0: Standard mode. 1: Solve compatibility problem with VLC player. * Only available if G.726 is supported.
alarm_enable	<boolean>	4/4	Enable audio detection
alarm_level	1~100	4/4	Audio detection alarm level
profile_i0_enable	<boolean>	4/4	Enable/disable this profile setting
profile_i0_policy	night, schedule	4/4	The mode which the profile is applied to. * Not support "policy=day" anymore when the version number (httpversion) is equal or greater than 0301a.
profile_i0_begintime	hh:mm	4/4	Begin time of schedule mode.
profile_i0_endtime	hh:mm	4/4	End time of schedule mode.

profile_i0_alarm_level	1~100	4/4	Audio detection alarm level

7.15 Tampering detection settings

Group: **tampering_c<0~(n-1)>** for n channel products (**capability.tampering > 0**)

n denotes the value of "capability_nvvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	4/4	Enable or disable tamper detection.
threshold	0~100	4/4	Threshold of tamper detection.
duration	10~600	4/4	If tampering value exceeds the "threshold" for more than "duration" second(s), then tamper detection is triggered.
ignorewidth	0,<positive integer>	1/7	Indicate the width to offset to start to analysis the image.
dark_enable	<boolean>	4/4	Enable or disable image too dark detection
dark_threshold	0~100	4/4	Threshold of image too dark detection
dark_duration	1~10	4/4	If image too dark value exceeds the "threshold" for more than "duration" second(s), then image too dark detection is triggered.
bright_enable	<boolean>	4/4	Enable or disable image too bright detection
bright_threshold	0~100	4/4	Threshold of image too bright detection
bright_duration	1~10	4/4	If image too bright value exceeds the "threshold" for more than "duration" second(s), then image too bright detection is triggered.
blurry_enable	<boolean>	4/4	Enable or disable image too blurry detection
blurry_threshold	0~100	4/4	Threshold of image too blurry detection
blurry_duration	1~10	4/4	If image too blurry value exceeds the "threshold" for more than "duration" second(s), then image too blurry detection is triggered.

7.16 DDNS

Group: **ddns** (capability.protocol.ddns > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the dynamic DNS.
provider	CustomSafe100, DyndnsDynamic, DyndnsCustom, Safe100	6/6	Safe100 => safe100.net DyndnsDynamic => dyndns.org (dynamic) DyndnsCustom => dyndns.org CustomSafe100 => Custom server using safe100 method
<provider>_hostname	string[128]	6/6	Your DDNS hostname.
<provider>_usernameemail	string[64]	6/6	Your user name or email to login to the DDNS service provider
<provider>_passwordkey	string[64]	6/6	Your password or key to login to the DDNS service provider.
<provider>_servername	string[128]	6/6	The server name for safe100. (This field only exists if the provider is customsafe100)

7.17 Express link

Group: expresslink

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable express link.
state	onlycheck, onlyoffline, checkonline, badnetwork	6/6	Camera will check the status of network environment and express link URL
url	string[64]	6/6	The url user define to link to camera

7.18 UPnP presentation

Group: upnppresentation

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the UPnP presentation service.

7.19 UPnP port forwarding

Group: upnpportforwarding

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the UPnP port forwarding service.
upnpnatstatus	0~3	6/7	The status of UPnP port forwarding, used internally. 0 = OK, 1 = FAIL, 2 = no IGD router, 3 = no need for port forwarding

7.20 System log

Group: syslog

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enableremotelog	<boolean>	6/6	Enable remote log.
serverip	<IP address>	6/6	Log server IP address.
serverport	514, 1025~65535	6/6	Server port used for log.
level	0~7	6/6	Levels used to distinguish the importance of the information: 0: LOG_EMERG 1: LOG_ALERT 2: LOG_CRIT 3: LOG_ERR 4: LOG_WARNING 5: LOG_NOTICE 6: LOG_INFO 7: LOG_DEBUG
setparamlevel	0~2	6/6	Show log of parameter setting.

VIVOTEK

			0: disable 1: Show log of parameter setting set from external. 2. Show log of parameter setting set from external and internal.
--	--	--	---

7.21 SNMP

7.25 Capability

Group: capability

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
api_httpversion	<string> This number start with 0301a.	0/7	<p>The version of VIVOTEK WebAPI with 4 integers plus 1 alphabet, There are composed by "major version", "minor version", "revision", "_platform". ex: 0301a_1</p> <p><u>Major version</u> Increase the major version when change, remove the old features/interfaces or the firmware has substantially change in architecture and not able to roll back to previous version. This may cause incompatibility with supporting software.</p> <p><u>Minor version</u> Increase the minor version when add new features/interfaces without change the old features and interfaces.</p> <p><u>Revision</u> Increase the revision when fix bugs without change any features of the output.</p> <p><u>platform</u> This is a constant, it is used to distinguish between different platforms</p> <p><u>API version format:</u> MMmmr_k Where "MM" is the major version, "mm" is the minor version and "r" is the revision. 'M' and 'm' and 'k' are decimal digit from 0 to 9, while 'r' is an alphabetic. EX: 0302b_1 => Major version = 03, minor version = 02, revision = b, platform = 1</p> <p>The 4 integer numbers are WebAPI version, we use short name: [httpversion] for it in this</p>

			<p>document.</p> <p>The 5th character is model-based version for API bug-fix and it's default to "a".</p> <p>Ex: If some APIs in a model does not follow the API definition of 0301a_1, we will fix them and change this API value to 0301b_1.</p>
bootuptime	<positive integer>	0/7	Server bootup time.
nir <Not support anymore>	0, <positive integer>	0/7	<p>Number of IR interfaces.</p> <p>(Recommand to use capability_daynight_c<0~"capability_nvideoin"-1>_builtinir for built-in IR and capability_daynight_c<0~"capability_nvideoin"-1>_externalir for external IR)</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.</p>
npir	0, <positive integer>	0/7	Number of PIRs.
ndi	0, <positive integer>	0/7	Number of digital inputs.
nvi	0, <positive integer>	0/7	Number of virtual inputs (manual trigger)
ndo	0, <positive integer>	0/7	Number of digital outputs.
naudioin	0, <positive integer>	0/7	The number of audio input channel. 0 means no audio input support.
naudioout	0, <positive integer>	0/7	The number of audio output channel
nvideoin	<positive integer>	0/7	Number of video inputs.
nvideoout	0, <Positive Integer>	0/7	Number of video out interface.
nvideoinprofile	<positive integer>	0/7	Number of video input profiles.
nmediastream	<positive integer>	0/7	Number of media stream per channels.
naudiosetting <Not support anymore>	<positive integer>	0/7	<p>Number of audio settings per channel.</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.</p> <p>* We replace "naudiosetting" with "naudioin".</p>

			More details, please refer the parameter description of "volume_internal" and "volume_external".
nuart	0, <positive integer>	0/7	Number of UART interfaces.
nmotion	<positive integer>	0/7	The number of motion window.
nmotionprofile	0, <positive integer>	0/7	Number of motion profiles.
ptzenabled	0, <positive integer>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; 0(not support), 1(support) Bit 1 => Built-in or external video source; 0(external), 1(built-in) Bit 2 => Support pan operation; 0(not support), 1(support) Bit 3 => Support tilt operation; 0(not support), 1(support) Bit 4 => Support zoom operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 5 => Support focus operation; 0(not support), 1(support) (only available when RS-485 interface is supported or SD/PZ/PT/PD/video server series) Bit 6 => Reserved bit; always 0. Bit 7 => External or built-in PT; 0(built-in), 1(external)
windowless	<boolean>	0/7	Indicate whether to support windowless plug-in.
evctrlchannel	<boolean>	0/7	Indicate whether to support HTTP tunnel for event/control transfer.
joystick	<boolean>	0/7	Indicate whether to support joystick control.
remotefocus <Not recommended to use this>	0,<positive integer>	0/7	An 4-bit integer, which indicates the supportive application of remotefocus. If the value of this parameter is larger than 0,

			<p>it means that the camera supports remotefocus function.</p> <p>bit 0 => Indicate whether to support both zoom and focus function.</p> <p>bit 1 => Only support zoom function.</p> <p>bit 2 => Only support focus function.</p> <p>bit 3 => Currently, this is a reserved bit, and the default value is 0.</p> <p>* It's strongly non-recommended to use this.</p> <p>* This is reserved for compatibility and will not be used after the version number (httpversion) is equal or greater than 0400a.</p> <p>* We replace "capability_remotefocus" with "capability_image_c0_remotefocus".</p>
npreset	0, <positive integer>	0/7	Number of preset locations
eptz	0, <positive integer>	0/7	<p>For "nvideoin" = 1, the definition is as following:</p> <p>A 32-bits integer, each bit can be set separately as follows:</p> <p>Bit 0 => 1st stream supports ePTZ or not.</p> <p>Bit 1 => 2nd stream supports ePTZ or not, and so on.</p> <p>For nvideoin >= 2, the definition is different:</p> <p>First all 32 bits are divided into groups for channel.</p> <p>Ex:</p> <p>nvideoin = 2, bit 0~15 are the 1st group for 1st channel, bit 16~31 are the 2nd group for 2nd channel.</p> <p>nvideoin = 3, bit 0~9 are the 1st group for 1st channel, bit 10~19 are the 2nd group for 2nd channel, bit 20~31 are the 3rd group for 3rd channel.</p> <p>Then, the 1st bit of the group indicates 1st stream of a channel support ePTZ or not. The 2nd bit of the group indicates 2nd stream of a</p>

			<p>channel support ePTZ or not, and so on.</p> <p>* For most products, the last stream of a channel will not support ePTZ. It is reserved for full view of the channel. For some dual-stream products, both streams support ePTZ.</p>
nanostream	0, <positive integer>	0/7	number of any media stream per channel
iva	<boolean>	0/7	Indicate whether to support Intelligent Video analysis
whitelight	<boolean>	0/7	Indicate whether to support white light led.
iris	<boolean>	0/7	Indicate whether to support iris control.
supportsd	<boolean>	0/7	Indicate whether to support local storage.
fisheye	<boolean>	0/7	The parameter is used to determine whether the product is fisheye or not.
tampering	<boolean>	0/7	Indicate whether to support tampering detection.
tamperingmode	tamper,toodark,toobright,tooblurry	0/7	<p>Available tampering mode list.</p> <p>* Only available when "capability_tampering" is 1.</p>
adaptiverecording	<boolean>	0/7	Indicate whether to support adaptive recording.
adaptivestreaming	<boolean>	0/7	Indicate whether to support adaptive streaming.
supporttriggertypes	seq,boot,motion,networkfail,recnotify,tampering,vi,vadp,di,volalarm,temperature,pir,visignal,backup<product dependent>	0/7	<p>list all the trigger types which are supported in the camera:</p> <p>"seq" = Periodic condition</p> <p>"boot" = System boot</p> <p>"motion" = Video motion detection</p> <p>"networkfail" = network connection failure</p> <p>"recnotify" = Recording notification.</p> <p>"tampering" = Tamper detection.</p> <p>"vi" = Virtual input (Manual trigger)</p> <p>"vadp" = VADP trigger</p> <p>"di"= Digital input</p> <p>"volalarm" = Audio detection</p> <p>"temperature" = Temperature detection</p> <p>"pir" = PIR detection</p>

VIVOTEK

			"visignal" = Video input signal loss. "backup" = Backing up recorded files * Only available when [httpversion] >= 0301a
storage_dbenabled	<boolean>	0/7	Media files are indexed in database.
protocol_https	< boolean >	0/7	Indicate whether to support HTTP over SSL.
protocol_rtsp	< boolean >	0/7	Indicate whether to support RTSP.
protocol_sip	<boolean>	0/7	Indicate whether to support SIP.
protocol_maxconnection	<positive integer>	0/7	The maximum number of allowed simultaneous connections.
protocol_maxgenconnection	<positive integer>	0/7	The maximum general streaming connections .
protocol_rtp_multicast scalable	<boolean>	0/7	Indicate whether to support scalable multicast.
protocol_rtp_multicast_bckchannel	<boolean>	0/7	Indicate whether to support backchannel multicast.
protocol_rtp_tcp	<boolean>	0/7	Indicate whether to support RTP over TCP.
protocol_rtp_http	<boolean>	0/7	Indicate whether to support RTP over HTTP.
protocol_spush_mjpeg	<boolean>	0/7	Indicate whether to support server push MJPEG.
protocol_snmp	<boolean>	0/7	Indicate whether to support SNMP.
protocol_ipv6	<boolean>	0/7	Indicate whether to support IPv6.
protocol_pppoe	<boolean>	0/7	Indicate whether to support PPPoE.
protocol_ieee8021x	<boolean>	0/7	Indicate whether to support IEEE802.1x.
protocol_qos_cos	<boolean>	0/7	Indicate whether to support CoS.
protocol_qos_dscp	<boolean>	0/7	Indicate whether to support QoS/DSCP.
protocol_ddns	<boolean>	0/7	Indicate whether to support DDNS.
videoin_type	0, 1, 2	0/7	0 => Interlaced CCD 1 => Progressive CCD 2 => CMOS
videoin_nresolution	<positive integer>	0/7	This equals "capability_videoin_c0_nresolution". * This is kept for compatibility.
videoin_resolution	A list of <WxH> <product	0/7	This equals "capability_videoin_c0_resolution".

	dependent>		* This is kept for compatibility.
videoin_maxframerate	A list of <Integer>	0/7	This equals "capability_videoin_c0_maxframerate". * This is kept for compatibility.
videoin_mjpeg_maxframe rate	A list of <Integer> and "-"	0/7	This equals "capability_videoin_c0_mjpeg_maxframerate ". * This is kept for compatibility.
videoin_h264_maxframerate	A list of <Integer> and "-"	0/7	This equals "capability_videoin_c0_h264_maxframerate". * This is kept for compatibility.
videoin_codec	mjpeg, h264, h265 <product dependent>	0/7	Available codec of a device, split by comma. The sequence is not limited. EX: FD8183 supports H.264 and MJPEG, then this is "mpeg,h264". IP9171 supports H.264, MJPEG and H.265, then this is "mpeg,h264,h265"
videoin_streamcodec	A list of <Positive Integer>	0/7	This equals "capability_videoin_c0_streamcodec". * This is kept for compatibility.
videoin_flexiblebitrate	<boolean>	0/7	Indicate whether to support flexible bit rate control.
videoout_codec	-, ntsc, pal	0/7	Current output information about video out. 1st element for 1st video-out, 2nd element for 2nd video-out, and so on. The number of element depends on "capability_nvideoout". "-": Video-out is not available ntsc: NTSC analog output pal: PAL analog output Ex: "nvideoout"=0, "videoout_codec"=- "nvideoout"=1 with NTSC,

VIVOTEK

			<p>"videoout_codec"=ntsc "nvideoout"=1 with PAL, "videoout_codec"=pal "nvideoout"=2 with both NTSC, "videoout_codec"=ntsc,ntsc</p> <p>* For camera, this feature is controlled by physical jump on device. No WebAPI to control it. This value is set only on camera power-on and maintains the status.</p> <p>* Only available when [httpversion] >= 0301a</p>
timeshift	<boolean>	0/7	Indicate whether to support time shift caching stream.
audio_aec	<boolean>	0/7	Indicate whether to support acoustic echo cancellation.
audio_mic <Not support anymore>	<boolean>	0/7	<p>Indicate whether to support built-in microphone input.</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.</p> <p>* We replace "audio_mic" with "audio_intmic".</p>
audio_intmic	<0~Positive Integer>	0/7	<p>Internal (Built-in) Microphone.</p> <p>0: Not support 1: Support Bit 0 for CH0, bit 1 for CH1, and so on.</p>
audio_extmic	<0~Positive Integer>	0/7	<p>External Microphone.</p> <p>0: Not support 1: Support Bit 0 for CH0, bit 1 for CH1, and so on.</p>
audio_alarm	<0~Positive Integer>	0/7	<p>0: Not support audio alarm. 1: Support audio alarm. Bit 0 for CH0, bit 1 for CH1, and so on.</p>
audio_linein <Not support anymore>	<boolean>	0/7	<p>Indicate whether to support external line input.</p> <p>* Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.</p> <p>* It will be replaced by audio_intmic and audio_extmic.</p>

audio_lineout	<boolean>	0/7	Indicate whether to support line output.
audio_michardwareswitch	<boolean>	0/7	Indicate whether the hardware supports built-in/external mic switch
audio_headphoneout <Not support anymore>	<boolean>	0/7	Indicate whether to support headphone output. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301a.
audioin_codec	aac4, gamr, g711, g726, - <product dependent>	0/7	Available audio codec. We take comma to split codec without any space. aac4: Advanced Audio Coding (AAC) gamr: Adaptive Multi-Rate (AMR) g711: G.711 g726: G.726 -: Not supported.
audioout_codec	g711, - <product dependent>	0/7	Available codec list for SIP. -: Not supported.
motion_wintype	rectangle, polygon	0/7	The supported motion window type. polygon: The window is a 2D polygon shape. rectangle: The window is a 2D rectangle shape.
motion_windomain	qvga, px, std, -	0/7	The domain to set an motion window. qvga: a 320x240 range to represent the whole image. px: Locate a window in the image with pixels. std: A normalized 0~9999 range. -: Not supported.
smartstream_support	<boolean>	0/7	Indicate whether smart stream is supported.
smartstream_version	<integer>	0/7	Number of smart stream version
smartstream_nstream	<positive integer>	0/7	Number of stream that support smart stream. *only available when "capability_smartstream_support" is 1
smartstream_windomain	qvga, px, std, -	0/7	The domain to set an focus window. qvga: a 320x240 range to represent the whole image. px: Locate a window in the image with pixels.

VIVOTEK

			std: A normalized 0~9999 range. -: Not supported. *only available when "capability_smartstream_support" is 1
smartstream_mode_autotracking	<boolean>	0/7	Indicate whether autotracking smart stream is supported. *only available when "capability_smartstream_support" is 1
smartstream_mode_manual	<boolean>	0/7	Indicate whether manual smart stream is supported. *only available when "capability_smartstream_support" is 1
smartstream_mode_hybrid	<boolean>	0/7	Indicate whether hybrid(autotracking+manual) smart stream is supported. *only available when "capability_smartstream_support" is 1
smartstream_nwindow_automototracking	<positive integer>	0/7	Maximum number of tracking window of autotracking. *only available when "capability_smartstream_support" is 1
smartstream_nwindow_manual	<positive integer>	0/7	Maximum number of tracking window of manual. *only available when "capability_smartstream_support" is 1
smartstream_nwindow_hybrid_autotracking	<positive integer>	0/7	Maximum number of tracking window of autotracking in hybrid mode. *only available when "capability_smartstream_support" is 1
smartstream_nwindow_hybrid_manual	<positive integer>	0/7	Maximum number of tracking window of manual in hybrid mode. *only available when "capability_smartstream_support" is 1
vadp_supportfeature	<positive integer>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => VADP interface Bit 1 => Capture video raw data Bit 2 => Support encode jpeg Bit 3 => Capture audio raw data Bit 4 => Support event trigger Bit 5 => Support license registration

			Bit 6 => Support shared memory API Bit 7 => Support digital signature of package Bit 8 => Support snapshot
vadp_npackage	<positive integer>	0/7	Indicate the maximum number of VADP package that can be uploaded to the device.
thermal_support	<boolean>	0/7	Indicate whether to support thermal IC.
thermal_controlmode	auto, customheater	0/7	Indicate the thermal control mode. "auto" : control by camera automatically "customheater" : the threshold of heater can be specified by user. * only available when "capability_thermal_support" is 1. * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
thermal_temperaturedetection	<boolean>	0/7	Indicate whether to support temperature detection.
camctrl_httptunnel <Not support anymore>	<boolean>	0/7	Indicate whether to support httptunnel. * Not support this parameter anymore when the version number (httpversion) is equal or greater than 0301b. * It will be replaced by capability_camctrl_ptztunnel.
camctrl_ptztunnel	<boolean>	0/7	Indicate whether to support ptztunnel. * We support this parameter when the version number (httpversion) is equal or greater than 0301b. This equals "capability_camctrl_c0_ptztunnel". * This is kept for compatibility.
camctrl_privilege	<boolean>	0/7	Indicate whether to support "Manage Privilege" of PTZ control in the security page. 1: support both /cgi-bin/camctrl/camctrl.cgi and /cgi-bin/viewer/camctrl.cgi 0: support only /cgi-bin/viewer/camctrl.cgi This is equivalent to "capability_camctrl_c0_privilege".

VIVOTEK

			* This is kept for compatibility.
uart_httptunnel	<boolean>	0/7	Indicate whether to support HTTP tunnel for UART transfer.
transmission_mode	Tx, Rx, Both	0/7	Indicate transmission mode of the machine: TX = server, Rx = receiver box, Both = DVR.
network_wire	<boolean>	0/7	Indicate whether to support Ethernet.
network_wireless	<boolean>	0/7	Indicate whether to support wireless.
wireless_s802dot11b	<boolean>	0/7	Indicate whether to support wireless 802.11b+.
wireless_s802dot11g	<boolean>	0/7	Indicate whether to support wireless 802.11g.
wireless_s802dot11n	<boolean>	0/7	Indicate whether to support wireless 802.11n.
wireless_beginchannel	1 ~ 14	0/7	Indicate the begin channel of wireless network
wireless_endchannel	1 ~ 14	0/7	Indicate the end channel of wireless network
wireless_encrypt_wep	<boolean>	0/7	Indicate whether to support wireless WEP.
wireless_encrypt_wpa	<boolean>	0/7	Indicate whether to support wireless WPA.
wireless_encrypt_wpa2	<boolean>	0/7	Indicate whether to support wireless WPA2.
derivative_brand	<boolean>	0/7	Indicate whether to support the upgrade function for the derivative brand. For example, if the value is true, the VVTK product can be upgraded to VVXX. (TCVV<->TCXX is excepted)
test_ac	<boolean>	0/7	Indicate whether to support test ac key.
version_onvifdaemon	<string>	0/7	Indicate ONVIF daemon version
version_onviftesttool	<string>	0/7	Indicate ONVIF test tool version
media_totalspace	<positive integer>	0/7	Available memory space (KB) for media.
media_snapshot_maxpre event	<positive integer>	0/7	Maximum snapshot number before event occurred.
media_snapshot_maxpost event	<positive integer>	0/7	Maximum snapshot number after event occurred.
media_snapshot_maxsize	<positive integer>	0/7	Maximum size (KB) of a snapshot.
media_videoclip_maxsize	<positive integer>	0/7	Maximum size (KB) of a videoclip.
media_videoclip_maxlength	<positive integer>	0/7	Maximum length (second) of a videoclip.

media_videoclip_maxpreevent	<positive integer>	0/7	Maximum duration (second) after event occurred in a videoclip.
image_iristype <Not recommended to use this>	<string>	0/7	<p>Indicate iris type.</p> <ul style="list-style-type: none"> ● "piris": P-Iris ● "dciris": DC-Iris ● "-": No Iris control support <p>* When "capability_iris"=0, this value must be "-".</p> <p>* Note: For some box-type cameras, this value may be varied depending on mounted lens.</p> <p>* We replace "capability_image_iristype" with " capability_image_c0_iristype ".</p> <p>* Reserved for compatibility, and suggest don't use this since [httpversion] > 0301a</p>
image_focusassist <Not recommended to use this>	<boolean>	0/7	<p>Indicate whether to support focus assist.</p> <p>* We replace "capability_image_focusassist" with " capability_image_c0_focusassist ".</p> <p>* Reserved for compatibility, and suggest don't use this since [httpversion] > 0301a</p>
localstorage_manageable	<boolean>	0/7	Indicate whether manageable local storage is supported.
localstorage_seamless	<boolean>	0/7	Indicate whether seamless recording is supported.
localstorage_modnum	0, <positive integer>	0/7	The maximum MOD connection numbers.
localstorage_modversion	<string>	0/7	Indicate MOD daemon version
localstorage_stormgrversion	<string>	0/7	Indicate storage manager daemon version
localstorage_supportededge	0, <positive integer>	0/7	<p>An 32-bit integer, which indicates the supportive application of edge storage.</p> <p>If the value of this parameter is larger than 0, it means that the camera supports edge recording function.</p> <p>bit 0 : It supports to record directly to an on-board SD-Card.</p> <p>bit 1~: Currently, they are reserved bit, and the default value is 0.</p>

VIVOTEK

localstorage_slconnnum	0,<positive integer>	0/7	The maximum seamless connection number.
localstorage_smartsd	<boolean>	0/7	The "Lifetime and Log SD Card" feature allows users to obtain the card's remaining lifetime information. 0: Non-support this feature 1: Support this feature * Only Sony SD card can support this function now.
remotecamctrl_master	0, <positive integer>	0/7	Indicate whether to support remote auxiliary camera (master side), this value means supporting max number of auxiliary camera.
remotecamctrl_slave	<boolean>	0/7	Indicate whether to support remote camera control (slave side).
fisheyelocaldewarp_c<0~(capability_nvideoin)-1><product dependent>	0, <positive integer>	0/7	Indicate the supported streams of local dewarp. One bit represents one supported stream. The LSB indicates stream 0. Ex: "3" means stream 0 and stream 1 support local dewarp. * Only available when "capability_fisheye" > 0

Group: **capability_camctrl_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

(capability_ptzenabled > 0)

* We support this group when the version number (httpversion) is equal or greater than 0303b.

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
ptztunnel	<boolean>	0/7	Indicate whether to support ptztunnel in this video input.
privilege	<boolean>	0/7	Indicate whether to support "Manage Privilege" of PTZ control in the security page in this video input. 1: support both /cgi-bin/camctrl/camctrl.cgi and /cgi-bin/viewer/camctrl.cgi 0: support only /cgi-bin/viewer/camctrl.cgi
rs485	<boolean>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => support rs485-in Bit 1 => support rs485-out

buildinpt	<boolean>	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => support build-in pan Bit 1 => support build-in tilt
zoommodule	<boolean>	0/7	Indicate whether to support zoom lens. In our product, only SD series and IZ series use the zoom lens. * Both varifocal and zoom lenses are built with movable elements that permit changing the effective focal length. And the key difference between a varifocal and a zoom lens can be explained by thinking about a lens that has been focused on an object at any focal length. A varifocal will need to be refocused whenever the focal length is adjusted; the zoom will stay in focus when the focal length is adjusted.

Group: **capability_ptz_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

(capability_ptzenabled > 0 and capability_camctrl_c<0~(n-1)>_zoommodule !=0)

* We support this group when the version number (httpversion) is equal or greater than 0303b.

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
panspeedlv	0, <positive integer>	0/7	The maximum speed level of pan motion. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
minpan	0, <positive integer>	0/7	The lower limit for pan position. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
maxpan	0, <positive integer>	0/7	The upper limit for pan position. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
minpanangle	<integer>	0/7	The lower limit for pan angle. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"

VIVOTEK

maxpanangle	<integer>	0/7	The upper limit for pan angle. *Only available when bit0 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
tiltspeedlv	0, <positive integer>	0/7	The maximum speed level of tilt motion. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
mintilt	0, <positive integer>	0/7	The lower limit for tilt position. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
maxtilt	0, <positive integer>	0/7	The upper limit for tilt position. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
mintiltangle	<integer>	0/7	The lower limit for tilt angle. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
maxtiltangle	<integer>	0/7	The upper limit for tilt angle. *Only available when bit1 of "capability_camctrl_c<0~(n-1)>_buildinpt" is "1"
zoomspeedlv	0, <positive integer>	0/7	The maximum speed level of zoom motion. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"
minzoom	0, <positive integer>	0/7	The lower limit for zoom position. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"
maxzoom	0, <positive integer>	0/7	The upper limit for zoom position. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"
maxdzoom	0, <positive integer>	0/7	The upper limit for digital zoom position. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"

focusspeedlv	0, <positive integer>	0/7	The maximum speed level of focus motion. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"
minfocus	0, <positive integer>	0/7	The lower limit for focus position. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"
maxfocus	0, <positive integer>	0/7	The upper limit for focus position. *Only available when the value of "capability_camctrl_c<0~(n-1)>_zoommodule" is "1"

Group: **capability_daynight_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
support	<boolean>	0/7	Indicate whether the camera supports day/night mode switch
builtinir	<boolean>	0/7	Indicate whether to support built-in IR led.
externalir	<boolean>	0/7	Indicate whether to support external IR led.
smartir	<boolean>	0/7	Indicate whether to support smart IR.
ircutfilter	<boolean>	0/7	Indicate whether to support IR cut.
lightsensor	<boolean>	0/7	Indicate whether to support light sensor.
blackwhitemode	<boolean>	0/7	Indicate whether to support automatically switch to Black & White display during the night mode. * We support this parameter when the version number (httpversion) is equal or greater than 0302a.

ircutsensitivity_type	<string>	0/7	<p>Indicate the cgi interface of "ircutcontrol_sensitivity".</p> <p>"options": the value of "ircutcontrol_sensitivity" parameter is "low, normal,high".</p> <p>"normalize": the value of "ircutcontrol_sensitivity" parameter is "1~100"</p> <ul style="list-style-type: none"> * Only available when "capability_daynight_c<n>_support" is 1. * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
ircutsensitivity_supportlevel	0, <positive integer>	0/7	<p>The value indicate the support strength level of ircutsensitivity.</p> <ul style="list-style-type: none"> * Only available when "capability_daynight_c<n>_support" is 1 and "capability_daynight_c<n>_ircutsensitivity_type" is normalize. * We support this parameter when the version number (httpversion) is equal or greater than 0302a.

Group: **capability_videoin_c<0~(n-1)>** n denotes the value of "capability_nvvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
lens_type	fisheye, fixed, varifocal, changeable, motor, - <product dependent>	0/7	<p>The lens type of this channel.</p> <p>fisheye: Fisheye lens</p> <p>fixed: Build-in fixed-focus lens.</p> <p>varifocal: Build-in varifocal lens.</p> <p>changeable: changeable lens. Like box-type camera, users can install any C-Mount or CS-Mount lens as they wish.</p> <p>motor: Lens with motor to support zoom, focus, etc.</p> <p>-: N/A</p> <p>* Only available when [httpversion] >= 0301a</p>
rotation	<boolean>	0/7	Indicate current mode whether support video rotation

streamcodec	<positive integer>	0/7	<p>Represent supported codec types of each stream.</p> <p>This contains a list of positive integers, split by comma. Each one stands for a stream, and the definition is as following:</p> <ul style="list-style-type: none"> Bit 0: Support MPEG4. Bit 1: Support MJPEG Bit 2: Support H.264 Bit 3: Support H.265
mode	0,<positive integer>	0/7	Indicate current video mode.
nmode	<positive integer>	0/7	Indicate how many video modes supported by this channel.
maxsize	<WxH>	0/7	The maximum resolution of all modes in this channel, the unit is pixel.
nprivacymask	0, <positive integer>	0/7	Number of privacy mask per channel
nresolution	<positive integer>	0/7	The maximum resolution options (listed in "resolution") in current video mode.
resolution	A list of <WxH> <product dependent>	0/7	<p>Resolution options in current video mode. These options are the possible options for "videoin_c<n>_s<m>_resolution".</p> <p>The last one is the maximum resolution in current mode.</p>
maxresolution	A list of <Integer>	0/7	<p>Represent supported maximum resolution of each stream in current video mode.</p> <p>* The element number is defined as "capability_nmediastream".</p>
maxframerate	A list of <Integer>	0/7	<p>Indicate frame rate that the video source outputs in current video mode.</p> <p>One to one mapping to the resolution in "resolution".</p> <p>* The element number is defined as "nresolution" in this group.</p> <p>* This parameter may be changed when "videoin_c<n>_cmosfreq"=50 or "videoin_c<n>_modulation"=pal.</p> <p>Ex: 30 fps is changed to 25 fps, 60 fps is changed to 50 fps, and so on.</p>

VIVOTEK

mjpeg_maxframerate	A list of <Positive Integer> and "-"	0/7	<p>Maximum fps that the device can encoded with MJPEG on resolutions in current video mode.</p> <p>"-" means not support.</p> <p>* One to one mapping to the resolution in "resolution".</p> <p>* The element number is defined as "nresolution" in this group.</p> <p>* This parameter may be changed when "videoin_c<n>_cmosfreq"=50 or "videoin_c<n>_modulation"=pal.</p> <p>Ex: 30 fps is changed to 25 fps, 60 fps is changed to 50 fps, and so on.</p> <p>* Only available when 'mjpeg' is listed in "capability_videoin_codec".</p>
mjpeg_maxbitrate	<positive integer>, -	0/7	<p>Maximum bitrates of MJPEG.</p> <p>The unit is bps.</p> <p>"-" means MJPEG does not support bit rate control.</p> <p>* Only available when 'mjpeg' is listed in "capability_videoin_codec".</p>
h264_maxframerate	A list of <Positive Integer> and "-"	0/7	<p>Maximum fps that the device can encoded with H.264 on resolutions in current video mode.</p> <p>"-" means not support.</p> <p>* One to one mapping to the resolution in "resolution".</p> <p>* The element number is defined as "nresolution" in this group.</p> <p>* This parameter may be changed when "videoin_c<n>_cmosfreq"=50 or "videoin_c<n>_modulation"=pal.</p> <p>Ex: 30 fps is changed to 25 fps, 60 fps is changed to 50 fps, and so on.</p> <p>* Only available when 'h264' is listed in "capability_videoin_codec".</p>

h264_maxbitrate	<positive integer>	0/7	<p>Maximum bitrates of H.264. The unit is bps.</p> <p>* Only available when 'h264' is listed in "capability_videoin_codec".</p>
h265_maxframerate	A list of <Positive Integer> and "-"	0/7	<p>Maximum fps that the device can encoded with H.265 on resolutions in current video mode. "--" means not support.</p> <p>* One to one mapping to the resolution in "resolution".</p> <p>* The element number is defined as "nresolution" in this group.</p> <p>* This parameter may be changed when "videoin_c<n>_cmosfreq"=50 or "videoin_c<n>_modulation"=pal. Ex: 30 fps is changed to 25 fps, 60 fps is changed to 50 fps, and so on.</p> <p>* Only available when 'h265' is listed in "capability_videoin_codec".</p>
h265_maxbitrate	<positive integer>	0/7	<p>Maximum bitrates of H.265. The unit is bps.</p> <p>* Only available when 'h265' is listed in "capability_videoin_codec".</p>
fisheye_mounttype <product dependent>	ceiling, wall, floor <product dependent>	0/7	<p>Indicate the supported type.</p> <p>wall mount: 180° panoramic view</p> <p>ceiling mount: 360° surround view without blind spots</p> <p>floor mount: 360° surround view without blind spots</p> <p>* Only available when "capability_fisheye" > 0</p>
dintraperiod_support	<boolean>	0/7	<p>0: Non-support "Dynamic intra frame period" 1: Support "Dynamic intra frame period" "Dynamic intra frame period" can be used to reduce bitrate by reducing the number of I-frame.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0301c.</p>

VIVOTEK

cameraunit_name	CU8131, CU8171, CU8161-H, CU8162-H, CU8163-H, CU8361-H, ... - <product dependent>	0/7	A "camera unit" name of a split-type camera system, which the camera unit and the video core are separated. -: If the camera is not a split-type camera system, the value of this parameter is "-". * We support this parameter when the version number (httpversion) is equal or greater than 0302b.
-----------------	---	-----	---

Group: **capability_videoin_c<0~(n-1)>_localdewarp**

(capability_fisheyelocaldewarp_c<0~(capability_nvvideoin)-1> > 0)

n denotes the value of "capability_nvvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
typeceilingmount	1O, 1P, 2P, 1R, 4R	0/7	Available dewarp types of ceiling and floor mount.
typewallmount	1O, 1P, 1R, 4R	0/7	Available dewarp types of wall mount.
resolutionC1P	A list of <WxH>	0/7	Available resolutions of 1P mode of ceiling and floor mount.
resolutionC2P	A list of <WxH>	0/7	Available resolutions of 2P mode of ceiling and floor mount.
resolutionC1R	A list of <WxH>	0/7	Available resolutions of 1R mode of ceiling and floor mount.
resolutionC4R	A list of <WxH>	0/7	Available resolutions of 4R mode of ceiling and floor mount.
resolutionW1P	A list of <WxH>	0/7	Available resolutions of 1P mode of wall mount.

Group: **capability_videoin_c<0~(n-1)>_mode<0~(m-1)>** n denotes the value of "capability_nvvideoin", m denotes the value of "capability_videoin_c<n>_nmode"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
rotation	<boolean>	0/7	Indicate this mode whether support video rotation

effectivepixel	<WxH>	0/7	The visible area of full scene in this video mode. The unit is pixel in source. * If "effectivepixel"<"capability_videoin_c<n>_maxsize", then the visible area is located at the center of full scene.
outputsize	<WxH>	0/7	The output size of source, equal to the captured size by device, in this video mode. The unit is pixel. This value is used as a basic coordinate system for many features, like ePTZ, privacy mask, motion, etc. * Source (most for image sensor) may perform scale or binning, etc on image data, and output data with smaller size. This parameter is designed to represent this.
binning	0, 1, 3	0/7	Indicate binning is used or not in this video mode. 0: No binning 1: 2x2 binning 3: 3x3 binning * Binning is a technology to increase light sensitivity by combining multiple pixels to one. The drawback is reduced resolution. We design this parameter to disclose this information.
nresolution	<positive integer>	0/7	How many resolution options in this video mode.
resolution	A list of <WxH>	0/7	Resolution options in this video mode. The last one is the maximum resolution in this video mode. * The element number is defined as "nresolution" in this group.
maxresolution	A list of <Integer>	0/7	Represent supported maximum resolution of each stream in current video mode. * The element number is defined as "capability_nmediastream".

aespeedsupportlevel	<positive integer>	0/7	<p>The value indicate the support strength level of aespeed.</p> <p>* Only available when "capability_image_c<n>_aespeed" is 1.</p>
gammacurve	0,1	0/7	<p>0: Non-support tuning Gamma curve 1: Support tuning Gamma curve</p>
lowlightmode	-,0,1	0/7	<p>-: Internal parameter, must not open to user. 0: Non-support low light mode 1: Support low light mode</p>
focusassist	0,1	0/7	<p>0: Non-support focus assist 1: Support focus assist</p>
remotefocus	0,<positive integer>	0/7	<p>An 4-bit integer, which indicates the supportive application of remotefocus in this channel.</p> <p>If the value of this parameter is larger than 0, it means that the camera supports remotefocus function in this channel.</p> <p>bit 0 => Indicate whether to support</p>

			both zoom and focus function. bit 1 => Only support zoom function. bit 2 => Only support focus function. bit 3 => Currently, this is a reserved bit, and the default value is 0.
focuswindomain	qvga, px, std, -	0/7	The domain to set an focus window. qvga: a 320x240 range to represent the whole image. px: Locate a window in the image with pixels. std: A normalized 0~9999 range. -: Not supported.
lensconfiguration_support	0,1	0/7	Indicate whether to support different image library configuration files for specific exchangeable lens.
freeze	<boolean>	0/7	0: Non-support image freeze feature 1: Support image freeze feature * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
autotrack_support	<boolean>	0/7	0: Non-support auto tracking feature 1: Support auto tracking feature * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
smartsensor_iristotalrange	A list of iris value	0/7	Available total step for iris value. * We support this parameter when the version number (httpversion) is equal or greater than 0302a. * Only available when "capability_image_c<0~(n-1)>_sensor_type" is "smartsensor"

Group: **capability_peripheral_c<0~(n-1)>** n denotes the value of "capability_nvideoin"

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
waterspray_support	<boolean>	0/7	0: Non-support water spray feature 1: Support water spray feature * We support this parameter when the version number (httpversion) is equal or greater than 0302a.
wiper_support	<boolean>	0/7	0: Non-support wiper feature 1: Support wiper feature * We support this parameter when the version number (httpversion) is equal or greater than 0302a.

7.26 Customized event script

Group: event_customtaskfile_i<0~2>

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Custom script identification of this entry.
date	string[4~20]	6/6	Date of custom script.
time	string[4~20]	6/6	Time of custom script.

7.27 Event setting

Group: **event_i<0~2>**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry.
enable	0, 1	6/6	Enable or disable this event.
priority	0, 1, 2	6/6	Indicate the priority of this event: "0"= low priority "1"= normal priority "2"= high priority
delay	1~999	6/6	Delay in seconds before detecting the next event.
trigger	boot, di, pir, motion, seq, recnotify, tampering, vi, volalarm, visignal, vadp, smartsd <product dependent>	6/6	Indicate the trigger condition: "boot" = System boot "di"= Digital input "pir"= PIR detection "motion" = Video motion detection "seq" = Periodic condition "visignal" = Video input signal loss. "recnotify" = Recording notification. "tampering" = Tamper detection. "vi"= Virtual input (Manual trigger) "volalarm"= Audio detection "smartsd"= Lifetime detection of SD card
triggerstatus	string[40]	6/6	The status for event trigger
di	0,<positive integer>	6/6	Indicate the source id of di trigger. This field is required when trigger condition is "di". One bit represents one digital input. The LSB indicates DI 0.

VIVOTEK

mdwin	0,<positive integer>	6/6	<p>Indicate the source window id of motion detection.</p> <p>This field is required when trigger condition is "md".</p> <p>One bit represents one window.</p> <p>The LSB indicates the 1st window.</p> <p>For example, to detect the 1st and 3rd windows, set mdwin as 5.</p>
mdwin0	0,<positive integer>	6/6	Similar to mdwin. The parameter takes effect when profile 1 of motion detection is enabled.
vi	0,<positive integer>	6/6	<p>Indicate the source id of vi trigger.</p> <p>This field is required when trigger condition is "vi".</p> <p>One bit represents one digital input. The LSB indicates VI 0.</p>
vadp <product dependent>	0,<positive integer>	6/6	<p>Indicate the source id of vadp event notification.</p> <p>Each bit corresponds to one vadp source, and the LSB indicates source id 0.</p> <p>For example, to detect event from any one of source id 0, 1 and 3, set vadp to 11.</p> <p>* Only available when vadp is listed in "capability_supporttriggertypes"</p>
valevel	0,1	6/6	<p>Select audio detection event.</p> <p>0: not select</p> <p>1: select</p>
valevel0	0,1	6/6	<p>Select audio detection profile event.</p> <p>0: not select</p> <p>1: select</p>
inter	1~999	6/6	<p>Interval of snapshots in minutes.</p> <p>This field is used when trigger condition is "seq".</p>

weekday	0~127	6/6	Indicate which weekday is scheduled. One bit represents one weekday. bit0 (LSB) = Saturday bit1 = Friday bit2 = Thursday bit3 = Wednesday bit4 = Tuesday bit5 = Monday bit6 = Sunday For example, to detect events on Friday and Sunday, set weekday as 66.
begintime	hh:mm	6/6	Begin time of the weekly schedule.
endtime	hh:mm	6/6	End time of the weekly schedule. (00:00 ~ 24:00 sets schedule as always on)
lowlightcondition <product dependent>	0, 1	6/6	Switch on white light LED in low light condition 0 => Do action at all times 1 => Do action in low-light conditions
action_do_i<0~(ndo-1)>_enable	<boolean>	6/6	Enable or disable trigger digital output. * Only available when "capability_ndo" > 0
action_do_i<0~(ndo-1)>_duration	1~999	6/6	Duration of the digital output trigger in seconds. * Only available when "capability_ndo" > 0
action_cf_enable	<Boolean>	6/6	Enable or disable sending media to SD card.
action_cf_folder	string[128]	6/6	Path to store media.
action_cf_media	NULL, 0~4,101	6/6	Index of the attached media. 101 means "Recording Notify"
action_cf_datefolder	<boolean>	6/6	Enable this to create folders by date, time, and hour automatically.
action_cf_backup	<Boolean>	6/6	Enable or disable the function that send media to SD card for backup if network is disconnected.
action_server_i<0~4>_enable	<boolean>	6/6	Enable or disable this server action.
action_server_i<0~4>_media	NULL, 0~4,101	6/6	Index of the attached media. 101 means "Recording Notify"
action_server_i<0~4>_datefolder	<boolean>	6/6	Enable this to create folders by date, time, and hour automatically.
action_goto_enable <product dependent>	<boolean>	6/6	Enable/disable ptz goto preset position on event triggered. * Only available when capability_ptzenabled > 0.

VIVOTEK

action_goto_name <product dependent>	string[40]	6/6	Specify the preset name that ptz goto on event triggered. * Only available when capability_ptzenabled > 0.
action_goto_sync <product dependent>	<boolean>	6/6	Capture media after moving to the location. * Only available when the bit4 of capability_ptzenable is 1 and the bit7 of capability_ptzenable is 0
action_autotrack_enable <product dependent>	<boolean>	6/6	Enable/disable auto tracking on event triggered. * Only available when the bit4 of capability_ptzenable is 1 and the bit7 of capability_ptzenable is 0

7.28 Server setting for event action

Group: **server_i<0~4>**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry
type	email, ftp, http, ns	6/6	Indicate the server type: "email" = email server "ftp" = FTP server "http" = HTTP server "ns" = network storage
http_url	string[128]	6/6	URL of the HTTP server to upload.
http_username	string[64]	6/6	Username to log in to the server.
http_passwd	string[64]	6/6	Password of the user.
ftp_address	string[128]	6/6	FTP server address.
ftp_username	string[64]	6/6	Username to log in to the server.
ftp_passwd	string[64]	6/6	Password of the user.
ftp_port	0~65535	6/6	Port to connect to the server.
ftp_location	string[128]	6/6	Location to upload or store the media.
ftp_passive	<boolean>	6/6	Enable or disable passive mode. 0 = disable passive mode 1 = enable passive mode
email_address	string[128]	6/6	Email server address.
email_sslmode	<boolean>	6/6	Enable support SSL.

email_port	0~65535	6/6	Port to connect to the server.
email_username	string[64]	6/6	Username to log in to the server.
email_passwd	string[64]	6/6	Password of the user.
email_senderemail	string[128]	6/6	Email address of the sender.
email_recipientemail	string[640]	6/6	Email address of the recipient.
ns_location	string[128]	6/6	Location to upload or store the media.
ns_username	string[64]	6/6	Username to log in to the server.
ns_passwd	string[64]	6/6	Password of the user.
ns_workgroup	string[64]	6/6	Workgroup for network storage.

7.29 Media setting for event action

Group: **media_i<0~4>**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry
type	snapshot, systemlog, videoclip, recordmsg	6/6	Media type to send to the server or store on the server.
snapshot_source	0~"capability_nmediastream -1"	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and etc. 2 means the third stream and etc. 3 means the fourth stream and etc.
snapshot_prefix	string[16]	6/6	Indicate the prefix of the filename. media_i0=> Snapshot1_ media_i1=> Snapshot2_ media_i2=> Snapshot3_ media_i3=> Snapshot4_ media_i4=> Snapshot5_
snapshot_datesuffix	0, 1	6/6	Add date and time suffix to filename: 1 = Add date and time suffix. 0 = Do not add.
snapshot_preevent	0~" capability_media_snapshot_maxpr eevent"	6/6	Indicates the number of pre-event images.

VIVOTEK

snapshot_postevent	0~" capability_media_snapshot_maxpostevent"	6/6	Indicates the number of post-event images.
videoclip_source	0~"capability_nmediastream -1"	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and etc. 2 means the third stream and etc. 3 means the fourth stream and etc.
videoclip_prefix	string[16]	6/6	Indicate the prefix of the filename.
videoclip_preevent	0 ~ " capability_media_videoclip_maxpreevent"	6/6	Indicates the time for pre-event recording in seconds.
videoclip_maxduration	1 ~ " capability_media_videoclip_maxlength"	6/6	Maximum duration of one video clip in seconds.
videoclip_maxsize	50 ~ " capability_media_videoclip_maxsize"	6/6	Maximum size of one video clip file in Kbytes.

7.30 Recording

Group: **recording_i<0~1>**

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
name	string[40]	6/6	Identification of this entry.
trigger	schedule, networkfail	6/6	The event trigger type schedule: The event is triggered by schedule networkfail: The event is triggered by the failure of network connection.
enable	<boolean>	6/6	Enable or disable this recording.
priority	0, 1, 2	6/6	Indicate the priority of this recording: "0" indicates low priority. "1" indicates normal priority. "2" indicates high priority.
source	0~"capability_nmediastream-1"	6/6	Indicate the source of media stream. 0 means the first stream. 1 means the second stream and so on.
maxretentiontime	<string>	6/6	To specify the expired time for automatic cleanup, and it only takes effect for video clip generated by recording_i <0~1>. Format is "P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S' , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours. The parameter takes effect when autocleanup_maxretentiontime_recording_enabled is enabled.
limitsize	<boolean>	6/6	0: Entire free space mechanism 1: Limit recording size mechanism
cyclic	<boolean>	6/6	0: Disable cyclic recording 1: Enable cyclic recording
notify	<boolean>	6/6	0: Disable recording notification 1: Enable recording notification

VIVOTEK

notifyserver	0~31	6/6	<p>Indicate which notification server is scheduled.</p> <p>One bit represents one application server (server_i0~i4).</p> <p>bit0 (LSB) = server_i0.</p> <p>bit1 = server_i1.</p> <p>bit2 = server_i2.</p> <p>bit3 = server_i3.</p> <p>bit4 = server_i4.</p> <p>For example, enable server_i0, server_i2, and server_i4 as notification servers; the notifyserver value is 21.</p>
weekday	0~127	6/6	<p>Indicate which weekday is scheduled.</p> <p>One bit represents one weekday.</p> <p>bit0 (LSB) = Saturday</p> <p>bit1 = Friday</p> <p>bit2 = Thursday</p> <p>bit3 = Wednesday</p> <p>bit4 = Tuesday</p> <p>bit5 = Monday</p> <p>bit6 = Sunday</p> <p>For example, to detect events on Friday and Sunday, set weekday as 66.</p>
begintime	hh:mm	6/6	Start time of the weekly schedule.
endtime	hh:mm	6/6	<p>End time of the weekly schedule.</p> <p>(00:00~24:00 indicates schedule always on)</p>
prefix	string[16]	6/6	Indicate the prefix of the filename.
cyclesize	100~	6/6	The maximum size for cycle recording in Kbytes when choosing to limit recording size.
reserveamount	0~15000000	6/6	The reserved amount in Mbytes when choosing cyclic recording mechanism.
dest	cf, 0~4	6/6	<p>The destination to store the recorded data.</p> <p>"cf" means local storage (CF or SD card).</p> <p>"0" means the index of the network storage.</p>
cffolder	string[128]	6/6	Folder name.
maxsize	100~2000	6/6	<p>Unit: Mega bytes.</p> <p>When this condition is reached, recording file is truncated.</p>

maxduration	60~3600	6/6	Unit: Second When this condition is reached, recording file is truncated.
adaptive_enable	<boolean>	6/6	Indicate whether the adaptive recording is enabled
adaptive_preevent	0~9	6/6	Indicate when is the adaptive recording started before the event trigger point (seconds)
adaptive_postevent	0~10	6/6	Indicate when is the adaptive recording stopped after the event trigger point (seconds)

7.31 HTTPS

Group: **https** (capability.protocol.https > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	To enable or disable secure HTTP.
policy	<Boolean>	6/6	If the value is 1, it will force HTTP connection redirect to HTTPS connection
method	auto, manual, install	6/6	auto =>Create self-signed certificate automatically. manual =>Create self-signed certificate manually. install =>Create certificate request and install.
status	-3 ~ 1	6/6	Specify the https status. -3= Certificate not installed -2 = Invalid public key -1 = Waiting for certificate 0= Not installed 1 = Active
countryname	string[2]	6/6	Country name in the certificate information.
stateorprovincename	string[128]	6/6	State or province name in the certificate information.
localityname	string[128]	6/6	The locality name in the certificate information.
organizationname	string[64] VIVOTEK Inc.	6/6	Organization name in the certificate information.
unit	string[64] VIVOTEK Inc.	6/6	Organizational unit name in the certificate information.

VIVOTEK

commonname	string[64] www.vivotek.com	6/6	Common name in the certificate information.
validdays	0 ~ 3650	6/6	Valid period for the certification.

7.32 Storage management setting

Group: **disk_i<0~(n-1)>** n is the total number of storage devices. (**capability.storage.dbenabled > 0**)

Currently it's only for local storage (SD, CF card), so n is equal to 1.

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
cyclic_enabled	<boolean>	6/6	Enable cyclic storage method.
autocleanup_enabled <Not recommended to use this>	<boolean>	6/6	<p>Enable automatic clean up method.</p> <p>Expired and not locked media files will be deleted.</p> <ul style="list-style-type: none"> * For forward compatibility reservations, but only group disk_i0_autocleanup is effective. * Not recommended to use this. Please refers "autocleanup" group. * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.
autocleanup_maxage <Not recommended to use this>	<positive integer>	6/6	<p>To specify the expired days for automatic clean up.</p> <ul style="list-style-type: none"> * For forward compatibility reservations, but only group disk_i0_autocleanup is effective. * Not recommended to use this. Please refers "autocleanup" group. * This parameter will not be used after the version number (httpversion) is equal or greater than 0400a.

Group: **autocleanup** (**capability.localstorage.supportedge > 0**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
enabled	<boolean>	6/6	<p>Enable automatic clean up method.</p> <p>Expired and not locked media files will be deleted.</p>

maxretentiontime_recording_enabled	<boolean>	6/6	Enable automatic clean up method for video clip generated by recording task. The parameter takes effect when autocleanup_enabled is enabled.
maxretentiontime_recording_i <0~1>_maxage	<string>	6/6	To specify the expired time for automatic clean up, and it only takes effect for video clip generated by recording_i <0~1>. Format is "P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S' , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours. The parameter takes effect when autocleanup_maxretentiontime_recording_enabled is enabled.
maxretentiontime_others_enabled	<boolean>	6/6	Enable automatic clean up method for all media files except media files generated by recording task. The parameter takes effect when autocleanup_enabled is enabled.
maxretentiontime_others_maxage	<string>	6/6	To specify the expired time for automatic clean up, and it takes effect for all media files except media files generated by recording task. Format is "P[Y]Y[MM]M[DDD]DT[hh]H[mm]M[ss]S' , similar with ISO8601 with symbols P Ex. P7D, it means 7 days. P1DT10H, it means 1 days and 10 hours. The parameter takes effect when autocleanup_maxretentiontime_others_enabled is enabled.

7.33 Region of interest

Group: **roi_c<0~(n-1)>** for n channel product. (**capability.eptz > 0**)

m denotes the value of "capability_nmediastream".

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
s<0~(m-2)>_home	<W,H> <product dependent>	1/6	ROI left-top corner coordinate.* If the minimal window size is 64x64, then the "win_i0_home"=(0~resolution_W-64, 0~resolution_H-64), which the resolution is the value in current stream.
s<0~(m-2)>_size	<WxH> <product dependent>	1/6	ROI width and height. The width value must be multiples of 16 and the height value must be multiples of 8* The minimal window size is 64x64
s<m-1>_home	<W,H> <product dependent>	1/7	ROI left-top corner coordinate.* If the minimal window size is 64x64, then the "win_i0_home"=(0~resolution_W-64, 0~resolution_H-64), which the resolution is the value in current stream.
s<m-1>_size	<WxH> <product dependent>	1/7	ROI width and height. The width value must be multiples of 16 and the height value must be multiples of 8* The minimal window size is 64x64

7.34 ePTZ setting

Group: **eptz_c<0~(n-1)>** for n channel product. (**capability.eptz > 0**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
osdzoom <Not recommended to use this>	<boolean>	1/4	Indicates multiple of zoom in is "on-screen display" or not. * Reserved for compatibility, and suggest don't use this since [httpversion] > 0302a * We replace "eptz_c<0~(n-1)>_osdzoom" with "videoin_c<0~(n-1)>_zoomratiodisplay".
smooth	<boolean>	1/4	Enable the ePTZ "move smoothly" feature
tiltspeed	-5 ~ 5	1/4	Tilt speed * Only available when "capability_fisheye" is 1
		1/7	Tilt speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
panspeed	-5 ~ 5	1/4	Pan speed * Only available when "capability_fisheye" is 1
		1/7	Pan speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
zoomspeed	-5 ~ 5	1/4	Zoom speed * Only available when "capability_fisheye" is 1
		1/7	Zoom speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
autospeed	1 ~ 5	1/4	Auto pan/patrol speed * Only available when "capability_fisheye" is 1
		1/7	Auto pan/patrol speed (It should be set by eCamCtrl.cgi rather than by setparam.cgi.)
rotatespeed	1 ~ 5	1/4	Rotate speed (only for Fisheye series) * Only available when "capability_fisheye" is 1 and "capability_fisheyelocaldewarp_c<n>" is 0

Group: **eptz_c<0~(n-1)>_s<0~(m-1)>** for n channel product and m is the number of streams which support ePTZ. (**capability.eptz > 0**)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
patrolseq	string[120]	1/4	The patrol sequence of ePTZ. All the patrol position indexes will be separated by ","
patroldwelling	string[160]	1/4	The dwelling time (unit: second) of each patrol point, separated by ",".
preset_i<0~19>_name	string[40]	1/4	Name of ePTZ preset. * Only available when "capability_fisheye" is 1
		1/7	Name of ePTZ preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)
preset_i<0~19>_pos	<W,H> <product dependent>	1/4	Left-top corner coordinate of the preset. * Only available when "capability_fisheye" is 1
		1/7	Left-top corner coordinate of the preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)
preset_i<0~19>_size	<WxH> <product dependent>	1/4	Width and height of the preset. * Only available when "capability_fisheye" is 1
		1/7	Width and height of the preset. (It should be set by ePreset.cgi rather than by setparam.cgi.)

7.35 Focus Window setting

Group: **focuswindow_c<0~(n-1)>** for n channel products

n denotes the value of "capability_nvideoin".

(capability_image_c<0~(n-1)>_remotefocus=1 or capability_image_c<0~(n-1)>_remotefocus=4)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
win_i0_enable	<boolean>	4/4	Enable or disable the window.
win_i0_home	<W,H> <product dependent>	4/4	Left-top corner coordinate of the window. * If the minimal window size is 192x144, then the "win_i0_home"=(0~resolution_W-192, 0~resolution_H-144), which the resolution is the value in current stream.
win_i0_size	<WxH> <product dependent>	4/4	Width and height of the window. * The minimal window size is 192x144

7.36 Seamless recording setting

Group: **seamlessrecording** (capability.localstorage.seamless> 0)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
diskmode	seamless, manageable	1/6	"seamless" indicates enable seamless recording. "manageable" indicates disable seamless recording.
maxconnection	3	1/7	Maximum number of connected seamless streaming.
enable	<boolean>	1/7	Indicate whether seamless recording is recording to local storage or not at present. (Read only)
guid<0~2>_id	string[127]	1/7	The connected seamless streaming ID. (Read only)
guid<0~2>_number	0~3	1/7	Number of connected seamless streaming with guid<0~2>_id. (Read only)

7.37 VIVOTEK Application Development Platformsetting

Group: **vadp**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
version	<string>	6/7	Indicate the VADP version.
resource_total_memory	0,<positive integer>	6/7	Indicate total available memory size for VADP modules.
resource_total_storage	0,<positive integer>	6/7	Indicate total size of the internal storage space for storing VADP modules.
resource_free_memory	0,<positive integer>	6/7	Indicate free memory size for VADP modules.
resource_free_storage	0,<positive integer>	6/7	Indicate current free storage size for uploading VADP modules.
module_number	0,<positive integer>	6/7	Record the total module number that already stored in the system.
module_order	string[40]	6/6	The execution order of the enabled modules.
module_save2sd	<boolean>	6/6	Indicate if the module should be saved to SD card when user want to upload it. If the value is false, save module to the internal storage space and it will occupy storage size.
number	string[128]	6/7	This number is used to register license key for VADP application.

Group: **vadp_module_i<0~(n-1)>** for n VADP package number (**capability_vadp_npackage > 0**)

n denotes the value of "capability_vadp_npackage".

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Indicate if the module is enabled or not. If yes, also add the index of this module to the module_order.
name	string[40]	6/6	Module name
extendedname	string[40]	6/6	Extended module name. If this value is not blank, it will be shown on the VADP UI first instead of vadp_module_i<n>_name.
url	string[120]	6/6	Define the URL string after the IP address if the module provides its own web page.
vendor	string[40]	6/6	The provider of the module.

vendorurl	string[120]	6/6	URL of the vendor.
version	string[40]	6/6	Version of the module.
license	string[40]	6/6	Indicate the license status of the module.
licmsg	string[128]	6/6	Indicate the message that will be show on license status when mouse over.
path	string[40]	6/6	Record the storage path of the module.
initscr	string[40]	6/6	The script that will handle operation commands from the system.
status	string[40]	6/6	Indicate the running status of the module.
statmsg	string[128]	6/6	Indicate the message that will be show on the running status when mouse over.
vvtklicensemec	string[40]	6/7	Indicate the module use VIVOTEK license mechanism

Group: **vadp_schedule_i<0~(n-1)>** for n VADP package number

n denotes the value of "capability_vadp_npackage".

(Only available when capability_vadp_npackage > 0 and the version number of "vadp_version" is equal or greater than 1.3.2.0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	6/6	Enable or disable the schedule mode to control the execution of the VADP package
begintime	hh:mm	6/6	Begin time of the schedule
endtime	hh:mm	6/6	End time of the schedule

Group: **vadp_event**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ntrigger	0,<positive integer>	6/7	Indicate the number of topics to be transferred to event manager for trigger.
triggerlist_i<0~(n-1)>_topic	string[256]	6/6	Indicate the event notification with this topic will be transferred to event manager as trigger. n is equal to ntrigger above.

7.38 camera PTZ control

Group: **camctrl** (capability.camctrl.ptztunnel > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enableptztunnel	<boolean>	1/4	Enable PTZ tunnel for camera control.

Group: **camctrl_c<0~(n-1)>** for n channel products (**capability.ptzenabled > 0**)

n denotes the value of "capability_nvideoin"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
patrolseq	string[120]	1/4	(For external device) The indexes of patrol points, separated by ","
patroldwelling	string[160]	1/4	(For external device) The dwelling time of each patrol point, separated by ","
preset_i<0~(capability_n preset -1)>_name	string[40]	1/4	Name of the preset location.
preset_i<0~(capability_n preset -1)>_dwelling	0 ~ 999	1/4	The dwelling time of each preset location
uart	0 ~ (capability_nuart -1)	1/4	Select corresponding uart (capability.nuart>0).
cameraid	0~255	1/4	Camera ID controlling external PTZ camera.
isptz	0 ~ 2	1/4	0: disable PTZ commands. 1: enable PTZ commands with PTZ driver. 2: enable PTZ commands with UART tunnel. * Only available when bit7 of capability_ptzenabled is 1
disablemdonptz	<boolean>	1/4	Disable motion detection on PTZ operation.

7.39 camera PTZ control (SD series)

Group: **camctrl_c<0~(n-1)>** for n channel products (the bit7 of capability_ptzenabled is 0 and the bit4 of capability_ptzenabled is 1)

n denotes the value of "capability_nvideoin" and k denotes the value of "capability_npreset"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ccdtype	string[16]	6/7	(Internal used, read only)
motortype	string[16]	6/7	(Internal used, read only)
cameraid	1 ~ 255	1/4	<p>Camera ID controlling external PTZ camera.</p> <p>Note:</p> <p>Please set your speed dome to the appropriate baud rate, and Camera ID, e.g. 2400bps, camera ID 1,2,3,,,etc.</p> <p>All Camera IDs on the same controlling system (NVR or rs485 keyboard) have to be distinct.</p> <p>Therefore, once you send a controlling signal, each camera will only accept the inputs with the corresponding ID.</p>
panspeed	-5 ~ 5	1/4	Pan speed
tiltspeed	-5 ~ 5	1/4	Tilt speed
zoomspeed	-5 ~ 5	1/4	Zoom speed
autospeed	-5 ~ 5	1/4	Auto pan speed
focusspeed	-5 ~ 5	1/4	Auto focus speed
preset_i<0~(k-1)>_name	string[40]	1/4	Name of the preset location.
preset_i<0~(k-1)>_pan	capability_ptz_c<0~(n-1)>_minpan ~ capability_ptz_c<0~(n-1)>_maxpan	1/4	Pan position at each preset location.
preset_i<0~(k-1)>_tilt	capability_ptz_c<0~(n-1)>_mintilt ~ capability_ptz_c<0~(n-1)>_maxtilt	1/4	Tilt position at each preset location.
preset_i<0~(k-1)>_zoom	capability_ptz_c<0~(n-1)>_minzoom ~ capability_ptz_c<0~(n-1)>_maxzoom	1/4	Zoom position at each preset location.

VIVOTEK

preset_i<0~(k-1)>_focus	capability_ptz_c<0~(n-1)>_minfocus ~ capability_ptz_c<0~(n-1)>_maxfocus	1/4	Focus position at each preset location.
preset_i<0~(k-1)>_fliped	<boolean>	1/4	Flip side at each preset location.
patrol_i<0~39>_name	string[40]	1/4	(For internal device) The name of patrol location
patrol_i<0~39>_dwelling	0 ~ 999	1/4	(For internal device) The dwelling time of each patrol location
disablemdonptz	<boolean>	1/4	Disable motion detection on PTZ operation.
defaulthome	<boolean>	1/4	This field tells system to use default home position or not.
axisx	capability_ptz_c<0~(n-1)>_minpan ~ capability_ptz_c<0~(n-1)>_maxpan	1/4	Custom home pan position.
axisy	capability_ptz_c<0~(n-1)>_mintilt ~ capability_ptz_c<0~(n-1)>_maxtilt	1/4	Custom home tilt position.
axisz	capability_ptz_c<0~(n-1)>_minzoom ~ capability_ptz_c<0~(n-1)>_maxzoom	1/4	Custom home zoom position.
axisf	capability_ptz_c<0~(n-1)>_minfocus ~ capability_ptz_c<0~(n-1)>_maxfocus	1/4	Custom home focus position.
axisflip	<boolean>	1/4	Custom home flip side.
returnhome	<boolean>	1/4	Enable/disable return home while idle.
returnhomeinterval	1~999	1/4	While idle over this time interval, idle action will be taken.
digitalzoom	<boolean>	1/4	Enable/disable digital zoom
idleaction_enable	<boolean>	1/4	Enable/disable idle action while idle
idleaction_type	pan,patrol,home,objtrack, prev	1/4	This field tells what kind of action should be taken while idle.
idleaction_interval	1~999	1/4	While idle over this time interval, idle action will be taken.

zoomenhance	<boolean>	1/4	Enable / Disable zoom enhancement
tour_index	-1, 0~19	1/4	Index of the enabled tour group, from 0 to 19. Set -1 to disable all the tour groups.
tour_i<0~19>_name	string[40]	1/4	Name of the tour.
tour_i<0~19>_type	<boolean>	1/4	0 = Recorded tour 1 = Preset tour
tour_i<0~19>_speed	-5 ~ 5	1/4	Preset tour: pan and tilt speed when moving between presets. Recorded tour: unnecessary.
tour_i<0~19>_checklist	string[512]	1/4	The indexes of preset positions, separated by ","
tour_i<0~19>_dwelltime	string[512]	1/4	Preset tour: time to wait before moving to the next preset position, separated by "," Recorded tour: number of seconds to wait before continuing a loop tour.

7.40 UART control

Group: **uart** (capability.nuart > 0 and capability.fisheye = 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
ptzdrivers_i<0~19, 127>_name	string[40]	1/4	Name of the PTZ driver.
ptzdrivers_i<0~19, 127>_location	string[128]	1/4	Full path of the PTZ driver.
enablehttptunnel	<boolean>	1/4	Enable HTTP tunnel channel to control UART.

Group: **uart_i<0~(n-1)>** n is uart port count (capability.nuart > 0 and capability.fisheye = 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
baudrate	110,300,600,1200, 2400,3600,4800,72 00,9600,19200,384 00,57600,115200	4/4	Set baud rate of COM port.
databit	5,6,7,8	4/4	Data bits in a character frame.

VIVOTEK

paritybit	none, odd, even	4/4	For error checking.
stopbit	1,2	4/4	1 2-1.5 , data bit is 5 2-2
uartmode	rs485, rs232	4/4	RS485 or RS232.
customdrvcmd_i<0~9>	string[128]	1/4	PTZ command for custom camera.
speedlink_i<0~4>_name	string[40]	1/4	Additional PTZ command name.
speedlink_i<0~4>_cmd	string[40]	1/4	Additional PTZ command list.
ptzdriver	0~19, 127 (custom), 128 (no driver)	1/4	The PTZ driver is used by this COM port.

7.41 UART control (SD series)

Group: **uart_i<0~(n-1)>** n is uart port count (capability.nuart > 0 and the bit7 of capability_ptzenabled is 0, the bit4 of capability_ptzenabled is 1)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
cameraid	1~255	4/4	Camera ID controlling external PTZ camera. Note: Please set your speed dome to the appropriate baud rate, and Camera ID, e.g. 2400bps, camera ID 1,2,3,,,etc. All Camera IDs on the same controlling system (NVR or rs485 keyboard) have to be distinct. Therefore, once you send a controlling signal, each camera will only accept the inputs with the corresponding ID.
baudrate	2400,4800,9600,19 200,38400,57600,1 15200	4/4	Set baud rate of COM port.
databit	5,6,7,8	4/4	Data bits in a character frame.
paritybit	none, odd, even	4/4	For error checking.

stopbit	1,2	4/4	1 2-1.5 , data bit is 5 2-2
uartmode	rs485	4/7	RS485 mode.

7.42 Lens configuration

Group: **lens** for n channel products

n denotes the value of "capability_nvvideoin"

(capability.image.c<0~(n-1)>.lensconfiguration.support = 1)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
selected	<string>	6/7	Current selected lens profile. e.g. lens_selected=lens_default_i0, it means choose lens configuration is i0 lens of default group.

Group: **lens_default**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
totalnumbers	0,<positive integer>	6/7	Total support number of the default lens profiles

Group: **lens_user**

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
totalnumbers	0,<positive integer>	6/7	Total support number of the user lens profiles

Group: **lens_default_i<0~(n-1)>** n is lens_default_totalnumbers

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
name	<string>	6/7	Default lens name

Group: **lens_user_i<0~(n-1)>** n is lens_user_totalnumbers

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
name	<string>	6/7	User-defined lens name

VIVOTEK

7.43 Fisheye info

Group: **fisheyefinfo** (capability.fisheye > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
revisedcenteraxis	<coordinate>	6/7	The actual center axis coordinate
radius	0, <positive integer>	6/7	The actual center radius

7.44 Fisheye local dewarp setting

Group: **fisheyedewarp_c<0~(n-1)>** (capability_fisheyelocaldewarp_c<0~(capability_nvideoin)-1> > 0)

n denotes the value of "capability_nvideoin", m denotes the value of "capability_nmmediastream"

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
panspeed	-5 ~ 5 <integer>	1/4	Pan speed of regional view
tiltspeed	-5 ~ 5 <integer>	1/4	Tilt speed of regional view
zoomspeed	-5 ~ 5 <integer>	1/4	Zoom speed of regional
s<0~(m-2)>_panorama_panstart	0~359 <integer>	1/4	Initial pan position of panorama view. (only available for 1P and 2P mode at ceiling or floor mount)
s<0~(m-2)>_region_pan	-90~359 <integer>	1/4	Pan home angle of regional view Pan range of ceiling/floor mount is [0~359]. Pan range of wall mount is [-90~90].
s<0~(m-2)>_region_tilt	-90~90 <integer>	1/4	Tilt home angle of regional view Tilt range of ceiling/floor mount is [0~90]. Tilt range of wall mount is [-90~90].
s<0~(m-2)>_region_zoo_m	100~300 <integer>	1/4	Zoom home ratio of regional view

7.45 PIR behavior define

Group: **pir** (capability.npir > 0)

NAME	VALUE	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	1/1	Enable/disable PIR

7.46 Auto tracking setting

Group: **autotrack** (capbility_image_c<0~(capability_nvideoin)-1>_autotrack_support > 0)

PARAMETER	VALUE	SECURITY (get/set)	DESCRIPTION
objsize_type	-1~2	1/4	Type of object size. -1 : customized width and height 0 : object size = 30 x 30 1 : object size = 10 x 20 2 : object size = 10 x 10
objsize_customized_width	10~320	1/4	The minimum width of tracking target.
objsize_customized_height	10~240	1/4	The minimum height of tracking target.
sensitivity	0~2	1/4	Tracking sensitivity. 0: Low 1: Medium 2: High

8. Useful Functions

8.1 Drive the Digital Output (**capability.ndo > 0**)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/setdo.cgi?do1=<state>[&do2=<state>]  
[&do3=<state>][&do4=<state>]
```

Where state is 0 or 1; "0" means inactive or normal state, while "1" means active or triggered state.

PARAMETER	VALUE	DESCRIPTION
do<num>	0, 1	0 – Inactive, normal state
		1 – Active, triggered state

Example: Drive the digital output 1 to triggered state and redirect to an empty page.

```
http://myserver/cgi-bin/dido/setdo.cgi?do1=1
```

8.2 Query Status of the Digital Input(**capability.ndi > 0**)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdi.cgi?[di0][&di1][&di2][&di3]
```

If no parameter is specified, all of the digital input statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[di0=<state>]\r\n
[di1=<state>]\r\n
[di2=<state>]\r\n
[di3=<state>]\r\n
```

where <state> can be 0 or 1.

Example: Query the status of digital input 1 .

Request:

```
http://myserver/cgi-bin/dido/getdi.cgi?di1
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
\r\n
di1=1\r\n
```

8.3 Query Status of the Digital Output (capability.ndo > 0)

Note: This request requires Viewer privileges

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdo.cgi?[do0][&do1][&do2][&do3]
```

If no parameter is specified, all the digital output statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[do0=<state>]\r\n
[do1=<state>]\r\n
[do2=<state>]\r\n
[do3=<state>]\r\n
```

where <state> can be 0 or 1.

Example: Query the status of digital output 1.

Request:

```
http://myserver/cgi-bin/dido/getdo.cgi?do1
```

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
\r\n
do1=1\r\n
```

8.4 Capture Single Snapshot

Note: This request requires Normal User privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg?[channel=<value>][&resolution=<value>]
[&quality=<value>][&streamid=<value>]
```

If the user requests a size larger than all stream settings on the server, this request will fail.

PARAMETER	VALUE	DEFALT	DESCRIPTION
channel	0~(n-1)	0	The channel number of the video source.
resolution	IP8165: (160~640, 120~360) IP8155: (160~1280, 120~1024)	0	The resolution of the image.
quality	1~5	3	The quality of the image.
streamid	0~(m-1)	2	The stream number.

The server will return the most up-to-date snapshot of the selected channel and stream in JPEG format. The size and quality of the image will be set according to the video settings on the server.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: image/jpeg\r\n
[Content-Length: <image size>]\r\n

<binary JPEG image data>
```

8.5 Account Management

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

[http://<servername>/cgi-bin/admin/editaccount.cgi?](http://<servername>/cgi-bin/admin/editaccount.cgi?method=<value>&username=<name>)

method=<value>&username=<name> [&userpass=<value>] [&privilege=<value>]
[&privilege=<value>] [...] [&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
method	Add	Add an account to the server. When using this method, the "username" field is necessary. It will use the default value of other fields if not specified.
	Delete	Remove an account from the server. When using this method, the "username" field is necessary, and others are ignored.
	edit	Modify the account password and privilege. When using this method, the "username" field is necessary, and other fields are optional. If not specified, it will keep the original settings.
username	<name>	The name of the user to add, delete, or edit.
userpass	<value>	The password of the new user to add or that of the old user to modify. The default value is an empty string.
Privilege	<value>	The privilege of the user to add or to modify.
	viewer	Viewer privilege.
	operator	Operator privilege.
	admin	Administrator privilege.
Return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.6 System Logs

Note: This request require Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/syslog.cgi
```

Server will return the most up-to-date system log.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <syslog length>\r\n
\r\n
<system log information>\r\n
```

8.7 Upgrade Firmware

Note: This request requires Administrator privileges.

Method: POST

Syntax:

```
http://<servername>/cgi-bin/admin/upgrade.cgi
```

Post data:

```
fimage=<file name>[&return=<return page>]\r\n
\r\n
<multipart encoded form data>
```

Server will accept the file named <file name> to upgradethe firmware and return with <return page> if indicated.

8.8 ePTZ Camera Control (capability.eptz > 0 and capability_fisheye = 0)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/eCamCtrl.cgi?channel=<value>&stream=<value>
[&move=<value>] - Move home, up, down, left, right
[&auto=<value>] - Auto pan, patrol
[&zoom=<value>] - Zoom in, out
[&zooming=<value>&zs=<value>] -Zoom without stopping, used for joystick
[&x=<value>&y=<value>&w=<value>&h=<value>&resolution=<value>] - Zoom in, out on a specific area
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] -Click on image
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>] ] - Set speeds
[&return=<return page>]
```

Example:

```
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&move=right
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&vx=2&vy=2&vz=2
http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&x=100&y=100&videosize=640x480&resolution=640x480&stretch=0
```

In zoom operation, there are two ways to control it, scale zoom and area zoom.

1. [Scale zoom]: contains two control method, relative movement and continuous movement

a. relative movement -

If you trigger a relative movement, it will only zoom certain ratio and stop by itself.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=tele>

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=wide>

The zoom ratio to move by relative movement is according to the setting of speedzoom [-5~5].

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&speedzoom=5>

b. continuous movement -

If you trigger a continuous movement, you have to handle the stop time by yourself.

A continuous movement is convenient to integrate a joystick control.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=tele&zs=1>

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=wide&zs=5>

zooming is used to indicate the moving direction, and zs is used to indicate the speed.

To stop a continuous movement, you have to use the command as below:

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=stop&zs=0>

2. [Area zoom]: it means to zoom in on a specific area, here is an example for a directly moving

[x, y] is the desired coordinate, and it will be the center after movement

[w, h] is the scaled area size

[resolution] is the base range of this coordinate system

The example shows [w, h] = [864, 488], which means to zoom in to ratio x2.2 based on [1920x1080].

Pay attention to that [x, y, w, h] are essential parameters in an area zoom case, and the stream index is counted from 0 as the first stream.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&x=912&y=297&w=864&h=488&resolution=1920x1080>

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
stream	<0~(m-1)>	Stream.
move	home	Move to home ROI.
	up	Move up.
	down	Move down.
	left	Move left.
	right	Move right.
auto	pan	Auto pan.
	patrol	Auto patrol.
	stop	Stop auto pan/patrol.
zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 6	Set the speed of zooming, "0" means stop.
x	<integer>	The desired coordinate, and it will be the center after movement
y	<integer>	
w	<integer>	The scaled area size
h	<integer>	
resolution	<window size>	The resolution of streaming.

VIVOTEK

vx	<integer>	The direction of movement, used for joystick control.
vy	<integer>	
vs	0 ~ 7	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX)window in web page
resolution	<window size>	The resolution of streaming.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
speedpan	-5 ~ 5	Set the pan speed.
speedtilt	-5 ~ 5	Set the tilt speed.
speedzoom	-5 ~ 5	Set the zoom speed.
speedapp	1 ~ 5	Set the auto pan/patrol speed.
return	<return page>	Redirect to the page < <i>return page</i> >after the parameter is assigned. The < <i>return page</i> >can be a full URL path or relative path according to the current path.

8.9 ePTZ Recall (capability.eptz > 0 and capability_fisheye = 0)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/eRecall.cgi?channel=<value>&stream=<value>&
recall=<value>[&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.
recall	Text string less than 40 characters	One of the present positions to recall.
return	<return page>	Redirect to the page <return page>after the parameter is assigned. The <return page>can be a full URL path or relative path according to the current path.

8.10 ePTZ Preset Locations(**capability.eptz > 0** and **capability_fisheye = 0**)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/ePreset.cgi?channel=<value>&stream=<value>
[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of the video source.
stream	<0~(m-1)>	Stream.
addpos	<Text string less than 40 characters>	Add one preset location to the preset list.
delpos	<Text string less than 40 characters>	Delete preset location from the preset list.
return	<return page>	Redirect to the page <return page>after the parameter is assigned. The <return page>can be a full URL path or relative path according to the current path.

8.11 IP Filtering

Note: This request requires Administrator access privileges.

Method: GET/POST

Syntax: <product dependent>

```
http://<servername>/cgi-bin/admin/ipfilter.cgi?type[=<value>]
http://<servername>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<ipaddress>[&index=<value>][&return=<return page>]
http://<servername>/cgi-bin/admin/ipfilter.cgi?method=del<v4/v6>&index=<value>[&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
type	NULL	Get IP filter type
	allow, deny	Set IP filter type
method	addv4	Add IPv4 address into access list.
	addv6	Add IPv6 address into access list.
	delv4	Delete IPv4 address from access list.
	delv6	Delete IPv6 address from access list.
ip	<IP address>	Single address: <IP address> Network address: <IP address / network mask> Range address:<start IP address - end IP address>
index	<value>	The start position to add or to delete.
return	<return page>	Redirect to the page <return page>after the parameter is assigned. The <return page>can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.12 IP Filtering for ONVIF

Syntax:<product dependent>

<pre>http://<servername>/cgi-bin/admin/ipfilter.cgi?type[=<value>] http://<servername>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<ipaddress>[&index=<value>][&return=<return page>] http://<servername>/cgi-bin/admin/ipfilter.cgi?method=del<v4/v6>&index=<value>[&return=<return page>]</pre>		
PARAMETER	VALUE	DESCRIPTION
type	NULL	Get IP filter type
	allow, deny	Set IP filter type
method	addv4	Add IPv4 address into access list.
	addv6	Add IPv6 address into access list.
	delv4	Delete IPv4 address from access list.
	delv6	Delete IPv6 address from access list.
ip	<IP address>	Single address: <IP address> Network address: <IP address / network mask> Range address:<start IP address - end IP address>
index	<value>	The start position to add or to delete.
return	<return page>	Redirect to the page <return page>after the parameter is assigned. The <return page>can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.13 UART HTTP Tunnel Channel (**capability.nuart > 0**)

Note: This request requires Operator privileges.

Method: GET and POST

Syntax:

```
http://<servername>/cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
GET /cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
x-sessioncookie: string[22]
```

```
accept: application/x-vvtk-tunnelled
```

```
pragma: no-cache
```

```
cache-control: no-cache
```

```
POST /cgi-bin/operator/uartchannel.cgi
```

```
x-sessioncookie: string[22]
```

```
content-type: application/x-vvtk-tunnelled
```

```
pragma : no-cache
```

```
cache-control : no-cache
```

```
content-length: 32767
```

```
expires: Sun, 9 Jan 1972 00:00:00 GMT
```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through a proxy server.

This channel will help to transfer the raw data of UART over the network.

Please see UART tunnel spec for detail information

PARAMETER	VALUE	DESCRIPTION
channel	0 ~ (n-1)	The channel number of UART.

8.14 Event/Control HTTP Tunnel Channel (capability).

evctrlchannel > 0)

Note: This request requires **Administrator** privileges.

Method: GET and POST

Syntax:

```
http://<servername>/cgi-bin/admin/ctrlevent.cgi
```

```
-----  
GET /cgi-bin/admin/ctrlevent.cgi
```

```
x-sessioncookie: string[22]
```

```
accept: application/x-vvtk-tunnelled
```

```
pragma: no-cache
```

```
cache-control: no-cache
```

```
-----  
POST /cgi-bin/admin/ ctrlevent.cgi
```

```
x-sessioncookie: string[22]
```

```
content-type: application/x-vvtk-tunnelled
```

```
pragma : no-cache
```

```
cache-control : no-cache
```

```
content-length: 32767
```

```
expires: Sun, 9 Jan 1972 00:00:00 GMT
```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through the proxy server.

This channel will help perform real-time event subscription and notification as well as camera control more efficiently. The event and control formats are described in another document.

See Event/control tunnel spec for detail information

8.15 Get SDP of Streams

Note: This request requires Viewer access privileges.

Method: GET/POST

Syntax:

```
http://<servername>/<network_rtsp_s<0~m-1>_accessname>
```

“m” is the stream number.

“network_accessname_<0~(m-1)>” is the accessname for stream “1” to stream “m”. Please refer to the “subgroup of network: rtsp” for setting the accessname of SDP.

You can get the SDP by HTTP GET.

When using scalable multicast, Get SDP file which contains the multicast information via HTTP.

8.16 Open the Network Stream

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

```
http://<servername>/<network_http_s<0~m-1>_accessname>
```

For RTSP (MP4), the user needs to input the URL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<0~m-1>_accessname>
```

“m” is the stream number.

For details on streaming protocol, please refer to the “control signaling” and “data format” documents.

8.17 Senddata (capability.nuart > 0)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/senddata.cgi?
[com=<value>][&data=<value>][&flush=<value>] [&wait=<value>] [&read=<value>]
```

PARAMETER	VALUE	DESCRIPTION
com	1 ~ <max. com port number>	The target COM/RS485 port number.
data	<hex decimal data>[,<hex decimal data>]	The <hex decimal data> is a series of digits from 0 ~ 9, A ~ F. Each comma separates the commands by 200 milliseconds.
flush	yes,no	yes: Receive data buffer of the COM port will be cleared before read. no: Do not clear the receive data buffer.
wait	1 ~ 65535	Wait time in milliseconds before read data.
read	1 ~ 128	The data length in bytes to read. The read data will be in the return page.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <system information length>\r\n
\r\n
<hex decimal data>\r\n
```

Where hexadecimal data is digits from 0 ~ 9, A ~ F.

8.18 Storage managements (capability.storage.dbenabled > 0)

Note: This request requires **administrator** privileges.

Method: GET and POST

Syntax:

http://<servername>/cgi-bin/admin/lsctrl.cgi?cmd=<cmd_type>[&<parameter>=<value>...]

The commands usage and their input arguments are as follows.

PARAMETER	VALUE	DESCRIPTION
cmd_type	<string>	Required. Command to be executed, including <i>search</i> , <i>insert</i> , <i>delete</i> , <i>update</i> , and <i>queryStatus</i> .

Command: **search**

PARAMETER	VALUE	DESCRIPTION
label	<integer primary key>	Optional. The integer primary key column will automatically be assigned a unique integer.
triggerType	<text>	Optional. Indicate the event trigger type. Please embrace your input value with single quotes. Ex. mediaType='motion' Support trigger types are product dependent.
mediaType	<text>	Optional. Indicate the file media type. Please embrace your input value with single quotes. Ex. mediaType='videoclip' Support trigger types are product dependent.
destPath	<text>	Optional. Indicate the file location in camera. Please embrace your input value with single quotes. Ex. destPath ='/mnt/auto/CF/NCMF/abc.mp4'
resolution	<text>	Optional. Indicate the media file resolution. Please embrace your input value with single quotes. Ex. resolution='800x600'
isLocked	<boolean>	Optional.

VIVOTEK

		Indicate if the file is locked or not. 0: file is not locked. 1: file is locked. A locked file would not be removed from UI or cyclic storage.
triggerTime	<text>	Optional. Indicate the event trigger time. (not the file created time) Format is "YYYY-MM-DD HH:MM:SS" Please embrace your input value with single quotes. Ex. triggerTime='2008-01-01 00:00:00' If you want to search for a time period, please apply "TO" operation. Ex. triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59' is to search for records from the start of Jan 1 st 2008 to the end of Jan 1 st 2008.
limit	<positive integer>	Optional. Limit the maximum number of returned search records.
offset	<positive integer>	Optional. Specifies how many rows to skip at the beginning of the matched records. Note that the offset keyword is used after limit keyword.

To increase the flexibility of search command, you may use "OR" connectors for logical "OR" search operations.

Moreover, to search for a specific time period, you can use "TO" connector.

Ex. To search records triggered by motion or di or sequential and also triggered between 2008-01-01 00:00:00 and 2008-01-01 23:59:59.

```
http://<servername>/cgi-bin/admin/lctrl.cgi?cmd=search&triggerType='motion'+OR+'di'+OR+'seq'&triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59'
```

Command: delete

PARAMETER	VALUE	DESCRIPTION
label	<integer primary key>	Required. Identify the designated record. Ex. label=1

Ex. Delete records whose key numbers are 1, 4, and 8.

```
http://<servername>/cgi-bin/admin/lctrl.cgi?cmd=delete&label=1&label=4&label=8
```

Command: update

PARAMETER	VALUE	DESCRIPTION

label	<integer primary key>	Required. Identify the designated record. Ex. label=1
isLocked	<boolean>	Required. Indicate if the file is locked or not.

Ex. Update records whose key numbers are 1 and 5 to be locked status.

```
http://<servername>/cgi-bin/admin/lctrl.cgi?cmd=update&isLocked=1&label=1&label=5
```

Ex. Update records whose key numbers are 2 and 3 to be unlocked status.

```
http://<servername>/cgi-bin/admin/lctrl.cgi?cmd=update&isLocked=0&label=2&label=3
```

Command: queryStatus

PARAMETER	VALUE	DESCRIPTION
retType	xml or javascript	Optional. Ex. retype=javascript The default return message is in XML format.

Ex. Query local storage status and call for javascript format return message.

```
http://<servername>/cgi-bin/admin/lctrl.cgi?cmd=queryStatus&retType=javascript
```

8.19 Virtual input (capability.nvi > 0)

Note: Change virtual input (manual trigger) status.

Method: GET

Syntax:

```
http://<servername>/cgi-bin/admin/setvi.cgi?vi0=<value>[&vi1=<value>][&vi2=<value>]
[&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
vi<num>	state[(duration)nstate]	Ex: vi0=1 Setting virtual input 0 to trigger state
	Where "state" is 0, 1. "0" means inactive or normal state while "1" means active or triggered state. Where "nstate" is next state after duration.	Ex: vi0=0(200)1 Setting virtual input 0 to normal state, waiting 200 milliseconds , setting it to trigger state. Note that when the virtual input is waiting for next state, it cannot accept new requests.
return	<return page>	Redirect to the page <return page>after the request is completely assigned. The <return page>can be a full URL path or relative path according the current path. If you omit this parameter, it will redirect to an empty page.

Return Code	Description
200	The request is successfully executed.
400	The request cannot be assigned, ex. incorrect parameters. Examples: setvi.cgi?vi0=0(10000)1(15000)0(20000)1 No multiple duration. setvi.cgi?vi3=0 VI index is out of range. setvi.cgi?vi=1 No VI index is specified.
503	The resource is unavailable, ex. Virtual input is waiting for next state. Examples: setvi.cgi?vi0=0(15000)1 setvi.cgi?vi0=1 Request 2 will not be accepted during the execution time(15 seconds).

8.20 Open Timeshift Stream (`capability.timeshift > 0`, `timeshift_enable=1`, `timeshift_c<n>_s<m>_allow=1`)

Note: This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

```
http://<servername>/<network_http_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]
```

For RTSP (MP4 and H264), the user needs to input the URL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]
```

“n” is the channel index.

“m” is the timeshift stream index.

For details on timeshift stream, please refer to the “TimeshiftCaching” documents.

PARAMETER	VALUE	DEFAULT	DESCRIPTION
maxsft	<positive integer>	0	Request cached stream at most how many seconds ago.
tsmode	normal, adaptive	normal	<p>Streaming mode: normal => Full FPS all the time. adaptive => Default send only I-frame for MP4 and H.264, and send 1 FPS for MJPEG. If DI or motion window are triggered, the streaming is changed to send full FPS for 10 seconds.</p> <p>(*Note: this parameter also works on non-timeshift streams.)</p>
reftime	mm:ss	The time camera receives the request.	<p>Reference time for maxsft and minsft. (This provides more precise time control to eliminate the inaccuracy due to network latency.)</p> <p>Ex: Request the streaming from 12:20 rtsp://10.0.0.1/live.sdp?maxsft=10&reftime=12:30</p>
forcechk	N/A	N/A	<p>Check if the requested stream enables timeshift, feature and if minsft is achievable.</p> <p>If false, return “415 Unsupported Media Type”.</p>
minsft	<positive integer>	0	How many seconds of cached stream client can accept at least. (Used by forcechk)

Return Code	Description
-------------	-------------

VIVOTEK

400 Bad Request	Request is rejected because some parameter values are illegal.
415 Unsupported Media Type	Returned, if forcechk appears,when minsft is not achievable or the timeshift feature of the target stream is not enabled.

8.21 RemoteFocus

(capability_image_c<0~(n-1)>_remotefocus=1)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/remotefocus.cgi?function=<value>[&direction=<value>]  
[&position=<value>][&steps=<value>][&iris]
```

PARAMETER	VALUE	DESCRIPTION

function	zoom, focus, auto, scan, stop, positioning, getstatus	<p>Function type</p> <p>zoom - Move focus motor focus – Move focus motor auto – Perform auto focus scan – Perform focus scan stop – Stop current operation positioning – Position the motors</p> <p>getstatus–Information of motors, return value as below:</p> <p>remote_focus_zoom_motor_max: Maximum steps of zoom motor remote_focus_focus_motor_max: Maximum steps of focus motor remote_focus_zoom_motor_start: Start point of zoom motor remote_focus_zoom_motor_end: End point of zoom motor remote_focus_focus_motor_start: Start point of effective focal length remote_focus_focus_motor_end: End point of effective focal length remote_focus_zoom_motor: Current position of zoom motor remote_focus_focus_motor: Current position of focus motor remote_focus_zoom_enable: Current function of zoom motor remote_focus_focus_enable: Current function of focus motor remote_focus_iris_open: The current status of iris. 0: irisenable, 1: irisopen</p> <p>Current function of zoom/focus motor, return value as below:</p> <p>0: no service 1: zooming 2. focusing 3: auto focus 4: focus scan 5: positioning (both zoom motor and focus motor) 12: reset focus</p>
----------	---	--

direction	direct, forward, backward	Motor's moving direction. It works only if function= zoom focus.
position	0~<motor_max>	Motor's position. It works only if function=zoom focus and direction=direct. <motor_max> is refer to remote_focus_focus_motor_max or remote_focus_zoom_motor_max which replied from "function=getstatus"
steps	1 ~ <motor_max>	Motor's moving steps. It works only if function=zoom focus and direction=forward backward. <motor_max> is refer to remote_focus_focus_motor_max or remote_focus_zoom_motor_max which replied from "function=getstatus"
iris	N/A	Open iris or not. It works only if function=auto scan.

8.22 BackFocus (capability_image_c<0~(n-1)>_remotefocus=4)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/remotefocus.cgi?function=<value>[&direction=<value>]  
[&position=<value>][&steps=<value>][&iris]
```

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

function	focus, auto, scan, stop, positioning, irisopen, irisenable, resetfocus, getstatus	<p>Function type</p> <p>focus – Move focus motor</p> <p>auto – Perform auto focus</p> <p>scan – Perform focus scan</p> <p>stop – Stop current operation</p> <p>positioning – Position the motors</p> <p>resetfocus – reset focus position to default</p> <p>irisopen – Fully open iris. It will maintain this status until sending irisenable cgi.</p> <p>irisenable – leave fully open iris and return back to previous status</p> <p>getstatus–Information of motors, return value as below:</p> <p>remote_focus_focus_motor_max: Maximum steps of focus motor</p> <p>remote_focus_focus_motor_start: Start point of effective focal length</p> <p>remote_focus_focus_motor_end: End point of effective focal length</p> <p>remote_focus_focus_motor: Current position of focus motor</p> <p>remote_focus_focus_enable: Current function of focus motor</p> <p>remote_focus_iris_open: The current status of iris. 0: irisenable, 1: irisopen</p> <p>Current function of zoom/focus motor, return value as below:</p> <p>0: no service 1: zooming 2: focusing 3: auto focus 4: focus scan 5: positioning (both zoom motor and focus motor) 12: reset focus</p>
direction	direct, forward, backward	Motor's moving direction. It works only if function= focus.
position	0~<motor_max>	Motor's position. It works only if function=focus and direction=direct. <motor_max> is refer to remote_focus_focus_motor_max which replied from "function=getstatus"

VIVOTEK

steps	1 ~ <motor_max>	Motor's moving steps. It works only if function=focus and direction=forward backward. <motor_max> is refer to remote_focus_focus_motor_max which replied from "function=getstatus"
iris	N/A	Open iris or not. It works only if function=auto scan.

8.23 Export Files

Note: This request requires Administrator privileges.

Method: GET

Syntax:

For daylight saving time configuration file:

```
http://<servername>/cgi-bin/admin/exportDst.cgi
```

For language file:

```
http://<servername>/cgi-bin/admin/export_language.cgi?currentlanguage=<value>
```

PARAMETER	VALUE	DESCRIPTION
currentlanguage	0~20	Available language lists. Please refer to: system_info_language_i0 ~ system_info_language_i19.

For setting backup file:

```
http://<servername>/cgi-bin/admin/export_backup.cgi?backup
```

8.24 Upload Files

Note: This request requires Administrator privileges.

Method: POST

Syntax:

For daylight saving time configuration file:

```
http://<servername>/cgi-bin/admin/upload_dst.cgi
```

Post data:

```
filename =<file name>\r\n\r\n<multipart encoded form data>
```

For language file:

```
http://<servername>/cgi-bin/admin/upload_lan.cgi
```

Post data:

```
filename =<file name>\r\n\r\n<multipart encoded form data>
```

For setting backup file:

```
http://<servername>/cgi-bin/admin/upload_backup.cgi
```

Post data:

```
filename =<file name>\r\n\r\n<multipart encoded form data>
```

Server will accept the file named <file name> to upload this one to camera.

8.25 Update Lens Configuration

Note: This request requires Administrator privileges.

Method: GET

Syntax:

For list a name of lens currently used:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?get_currentlens
```

For list all names of lens installed in camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?list_lens
```

For choose selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_lens=<value>
```

You need to reboot manually after you choose another lens configuration.

For choose selected lens configuration and reboot camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_reboot_lens=<value>
```

The camera will reboot after using this cgi.

For delete selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?delete_lens=<value>
```

PARAMETER	VALUE	DESCRIPTION
value	<string>	Available lens name. Please refer to: lens_default_i<0~(n-1)>_name lens_user_i<0~(n-1)>_name n is a positive integer.

Method: POST

Syntax:

For upload user-defined lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?upload_lens
```

Post data:

```
upload_lens_profile_input = <file name>\r\n\r\n
```

<multipart encoded form data>

Server will accept the file named <file name> to upload the lens profile to camera.

8.26 Media on demand (capability.localstorage.modnum > 0)

Media on demand allows users to select and receive/watch/listen to metadata/video/audio contents on demand.

Note: This request requires Viewer access privileges.

Syntax:

rtsp://<servername>/mod.sdp? [&stime=<value>][&etime=<value>][&length=<value>][&loctime=<value>][&file=<value>][&tsmode=<value>]
--

PARAMETER	VALUE	DEFAULT	DESCRIPTION
stime	<YYYYMMDD_HHMMSS.MMM>	N/A	Start time.
etime	<YYYYMMDD_HHMMSS.MMM>	N/A	End time.
length	<positive integer>	N/A	The length of media of interest. The unit is second.
loctime	<boolean>	0	Specify if start/end time is local time format. 1 for local time, 0 for UTC+0
file	<string>	N/A	The media file to be played.
tsmode	<positive integer>	N/A	Timeshift mode, the unit is second.

Ex.

stime	etime	length	file	Description
V	V	X	X	Play recordings between stime and etime rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&etime=2011_0312_040510.000
V	X	V	X	Play recordings for length seconds which start from stime rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&length=120
X	V	V	X	Play recordings for length seconds which ends at etime rtsp://10.10.1.2/mod.sdp?etime=20110312_040400.000&length=120
X	X	X	V	Play file file rtsp://10.10.1.2/mod.sdp?filename=/mnt/link0/

8.27 Fisheye local dewarp camera control (capability.fisheye > 0 and capability.fisheyelocaldewarp.c0 > 0, only support in 1R mode)

Note: This request requires camctrl privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/fdCamCtrl.cgi?channel=<value>&stream=<value>
[&move=<value>] - Move home, up, down, left, right
[&zoom=<value>] - Zoom wide, tele
[[&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>]] - Set speeds
[&zooming=<value>&zs=<value>] - Zoom without stopping, used for joystick
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] - Click on image (Move
the center of image to the coordination (x,y) based on resolution or videosize of 1O mode.)
[&return=<return page>]
```

Example:

```
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=right
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&zoom=tele
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&move=top&speedtilt=-1
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&zooming=tele&zs=2
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&stream=0&vx=5&vy=3&vs=2
http://myserver/cgi-bin/camctrl/fdCamCtrl.cgi?channel=0&x=700&y=700&videosize=1920x1920&resolution=1920x1920&stretch=1
```

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
stream	<0~(m-1)>	Stream.
move	home	Move to home position.
	up	Move up.
	down	Move down.
	left	Move left.
	right	Move right.

zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
speedpan	-5 ~ 5	Set the pan speed of current command.
speedtilt	-5 ~ 5	Set the tilt speed of current command.
speedzoom	-5 ~ 5	Set the zoom speed of current command.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 6	Set the speed of zooming, "0" means stop.
vx	-6 ~ 6	The direction of movement, used for joystick control.
vy	-6 ~ 6	
vs	0 ~ 7	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX) window in web page of 1O content.
resolution	<window size>	The resolution of streaming of 1O content.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.28 3D Privacy Mask

(capability_image_c<0~(n-1)>_privacymask_wintype =

3Drectangle) n denotes the value of "capability_nvideoin"

Note: This request requires admin user privilege

Method: GET/POST

Syntax:

http://<servername>/cgi-bin/admin/setpm3d.cgi?method=<value>&name=<value>&[maskheight=<value>&maskwidth=<value>&videosize=<value>&return=<return page>]

PARAMETER	VALUE	DESCRIPTION
method	add	Add a 3D privacy mask at current location
	delete	Delete a 3D privacy mask
	edit	Edit a 3D privacy mask
maskname	string[40]	3D privacy mask name
maskheight	integer	3D privacy mask height
maskwidth	integer	3D privacy mask width
videosize	<window size>	Optimal. The size of plug-in (ActiveX) window in web page is the size of the privacy window size. This field is not necessary, it will use the default value if not specified. 320x180 for 16:9 resolution and 320x240 for 4:3 resolution.
return	<return page>	Redirect to page <return page> after the 3D privacy mask is configured. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.29 Camera Control

(capability_camctrl_c<0~(n-1)>_zoommodule = 1)

Note: This request requires Viewer privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/camctrl/camctrl.cgi?[channel=<value>][&camid=<value>]
[&move=<value>] - Move home, up, down, left, right
[&focus=<value>] - Focus operation
[&auto=<value>] - Auto pan, patrol
[&zoom=<value>] - Zoom in, out
[&zooming=<value>&zs=<value>] - Zoom without stopping, used for joystick
[&vx=<value>&vy=<value>&vs=<value>] - Shift without stopping, used for joystick
[&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] - Click on image
(Move the center of image to the coordination (x,y) based on resolution or videosize.)
[ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>][&speedlink=<value>] ] - Set speeds
[&return=<return page>]
```

Example:

<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&move=right>
<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&zoom=tele>
<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&x=300&y=200&resolution=704x480&videosize=704x480&stretch=1>

PARAMETER	VALUE	DESCRIPTION
channel	<0~(n-1)>	Channel of video source.
camid	0,<positive integer>	Camera ID.
move	home	Move to camera to home position.
	up	Move camera up.
	down	Move camera down.
	left	Move camera left.
	right	Move camera right.
speedpan	-5 ~ 5	Set the pan speed.
speedtilt	-5 ~ 5	Set the tilt speed.

VIVOTEK

speedzoom	-5 ~ 5	Set the zoom speed.
speedfocus	-5 ~ 5	Set the focus speed.
speedapp	-5 ~ 5	Set the auto pan/patrol speed.
auto	pan	Auto pan.
	patrol	Auto patrol.
	stop	Stop camera.
zoom	wide	Zoom larger view with current speed.
	tele	Zoom further with current speed.
	stop	Stop zoom.
zooming	wide or tele	Zoom without stopping for larger view or further view with zs speed, used for joystick control.
zs	0 ~ 8 <SD8362>	Set the speed of zooming, "0" means stop.
vx	<integer , excluding 0>	The slope of movement = vy/vx, used for joystick control.
vy	<integer>	
vs	0 ~ 127	Set the speed of movement, "0" means stop.
x	<integer>	x-coordinate clicked by user. It will be the x-coordinate of center after movement.
y	<integer>	y-coordinate clicked by user. It will be the y-coordinate of center after movement.
videosize	<window size>	The size of plug-in (ActiveX) window in web page
resolution	<window size>	The resolution of streaming.
stretch	<boolean>	0 indicates that it uses resolution (streaming size) as the range of the coordinate system. 1 indicates that it uses videosize (plug-in size) as the range of the coordinate system.
focus	auto	Auto focus.
	far	Focus on further distance.
	near	Focus on closer distance.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.30 Recall (capability_camctrl_c<0~(n-1)>_zoommodule = 1)

Note: This request requires Viewer privileges.

Method: GET

Syntax:

```
http://<servername>/cgi-bin/viewer/recall.cgi?
recall=<value>[&channel=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
recall	string[30]	One of the present positions to recall.
channel	0~(capability_nvideoin-1)	Channel of the video source.
return	<return page>	Redirect to the page <return page> after the parameter is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.

8.31 Preset Locations

(capability_camctrl_c<0~(n-1)>_zoommodule = 1)

Note: This request requires Operator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/preset.cgi?[channel=<value>]
[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
addpos	string[30]	Add one preset location to the preset list.
channel	0~(capability_nvideoin-1)	Channel of the video source.
delpos	string[30]	Delete preset location from preset list.

VIVOTEK

return	<return page>	Redirect to the page < <i>return page</i> > after the parameter is assigned. The < <i>return page</i> > can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.
--------	---------------	---

8.32 SmartSD (capability_localstorage_smartsd > 0)

Note: This request requires Administrator privileges.

Method: GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/smartsd.cgi?function=<value>
```

PARAMETER	VALUE	DESCRIPTION
-----------	-------	-------------

VIVOTEK

function	getstatus	<p>Function type</p> <p>getstauts : Information of smartSD internal status return value as below:</p> <p>smartsd_lifetime_num: Accumulated amount of data that has been written</p> <p>smartsd_lifetime_den: Card-guaranteed amount of data that can be written</p> <p>smartsd_lifetime_rate: The ratio of smartsd_lifetime_num to smartsd_lifetime_den. It means the accumulated percentage amount of flash block has been written. The range is from 0 to 100 (unit : %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p>smartsd_spare_block_rate: Usage rate of spare blocks. It means the usage percentage of total spare block. The range is from 0 to 100 (unit : %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p>smartsd_data_size_per_unit: Size (in sectors) of data to be written when Life Information1 is updated.</p> <p>smartsd_num_of_sudden_power_failure: Indicates how many times power disconnection occurred during write/erase operations</p> <p>smartsd_operation_mode: Enables/disables power-off detection and write error notification</p> <p>smartsd_attached: Indicate the smartSD is attached or not.</p>
----------	-----------	--

Electromagnetic Compatibility (EMC)

FCC Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the installation manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

CE Mark Warning

This is a Class A product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

VCCI Warning

この装置は、情報処理装置等電波障害自主規制協議会(VCCI)の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい
