# Introduction

## Introduction to your Router

The BiPAC 8200AXL-1200 is a multi-service VDSL2 router. It features fiber-ready triple-WAN VDSL2 supports backward compatibility to ADSL2+ for a longer reach distance, an all-in-one advanced device including concurrent dual-band 802.11ac (5GHz) 867Mbps and 802.11n (2.4GHz) 300Mbps, Gigabit Ethernet, connections to 3G/4G LTE and NAS (Network Attached Storage) in one unit. As well as being IPv6-capable, the VDSL2 router supports superfast fiber connections via a Gigabit Ethernet WAN port. It also has two USB ports, allowing the device to act as a NAS (Network Attached Storage) device and FTP (File Transfer Protocol) access. Moreover, the USB port can host a 3G/4G LTE USB modem connecting to the 3G/4G LTE network for Internet access. With an array of advanced features, the router delivers a future-proof solution for VDSL2 connections, superfast FTTC and ultra-speed FTTH (Fiber-To-The-Home) network deployment and services.

### Maximum wireless performance

Featured with simultaneous dual-band technology, the router can run both 2.4GHz and 5GHz frequency bands at the same time, offering ultra-fast wireless speeds of up to 867Mbps (5GHz) and 300Mbps (2.4GHz), and SSIDs on both bands. The BiPAC 8200AXL-1200, by adopting this state-of-the-art technology, allows for multiple-demand applications, such as streaming HD videos and multiplayer gaming simultaneously. The Wireless Protected Access (WPA-PSK/WPA2-PSK) and Wireless Encryption Protocol (WEP) features enhance the level of transmission security and access control over wireless LAN. The router also supports the Wi-Fi Protected Setup (WPS) standard, allowing users to establish a secure wireless network by simply pushing a button.

### 3G/4G LTE mobility

With BiPAC 8200AXL-1200 you can connect a 3G/4G LTE USB modem to its built-in USB port, allowing you to watch movies, download music or access e-mail no matter where you may be. You can even share your Internet connection with others, when away on business, at a show, or wherever there is mobile signal but no fixed line access.

### Experience Gigabit WAN

The BiPAC 8200AXL-1200 has four Gigabit LAN ports and one Giga Ethernet port as an Ethernet WAN port. This EWAN offers another broadband connectivity option for connecting to a cable, DSL, fiber modem.

## **Pathway to the Future**

IPv6 (Internet Protocol Version 6), launched as the current IPv4 is getting filled up, gradually becomes the indispensable addressing system for the savvy cloud computing users. Equipped with IPv6, the router eagerly provides users a better working environment to work with, a shortcut to upgrade and a more efficient solution to save budget. For the customers during this transition period, dual stack (IPv4 and IPv6) feature enables the hosts a convenient way to reserve both address to smooth over this coexistent period.

## **Web Based GUI**

It supports web based GUI for configuration and management. It is user-friendly and comes with online help. It also supports remote management capability for remote users to configure and manage this product.

## **Firmware Upgradeable**

Device can be upgraded to the latest firmware through the WEB based GUI.

# Features

- Compliant with VDSL2/ADSL2+ standards
- Triple-WAN ports for 3G/4G LTE, VDSL2/ADSL2+ fallback, Gigabit Ethernet WAN (EWAN) for broadband connectivity
- Simultaneous dual-band Wireless 867Mbps (5GHz) and 300Mbps (2.4GHz)
- Gigabit EWAN and LAN ports
- IPv6 ready (IPv4/IPv6 dual stacks)
- Fibre (FTTC/FTTP/FTTH) ready with high WAN throughput via EWAN port
- USB port for NAS, Printer Server and 3G/4G LTE USB modem
- QoS for traffic prioritization and bandwidth management
- Compliant with IEEE 802.11a/b/g/n and 802.11ac standards
- WPS (Wi-Fi Protected Setup) for easy setup
- Wireless security with WPA-PSK/WPA2-PSK
- Multiple wireless SSIDs with wireless guest access
- Supports Bridge Grouping
- SOHO firewall security
- Supports IPTV application
- Ideal for SOHO and office users

## VDSL2/ADSL2+ Compliance

- Compliant with xDSL standard
- ITU-T G.993.2 (VDSL2)
- ITU-T G.998.4 (G.inp)
- ITU-T G.993.5 (G.vector)
- ITU-T G.992.3 (G.dmt.bis) Annex A, B, I, J, L and M.
- ITU-T G.992.5 (G.dmt.bis plus)
- Full-rate ANSI T1.413 Issue 2
- ITU-T G.992.1 (G.dmt) Annex A, B
- ITU-T G.992.2 (G.lite) Annex A, B
- Supports VDSL2 band plan: 997 and 998
- ADSL2/2+ fallback modes
- Supports VDSL2 profiles: 8a, 8b, 8c, 8d, 12a, 12b, 17a, 30a and 35b.
- Supports ATM and PTM modes

## **Network Protocols and Features**

- IPv4 or IPv4/IPv6 dual stack
- NAT, static (v4/v6) routing and RIP-1/2
- Pv6 stateless/stateful address auto-configuration
- IPv6 router advertisement
- IPv6 over PPP
- DHCPv6
- Universal Plug and Play (UPnP) compliant
- Dynamic Domain Name System (DDNS)
- Virtual Server (port forwarding) and DMZ
- SNTP, DNS relay, IGMP proxy and IGMP snooping for video service
- MLD proxy and MLD snooping for video service
- Management based on IP protocol, port number and address
- Supports Bridge Grouping

## **Firewall**

- Built-in NAT firewall
- Stateful Packet Inspection (SPI)
- Prevents DoS attacks including Land Attack, Ping of Death, etc
- Remote access control for web based access
- Packet filtering - port, source IP address, destination IP address
- URL content filtering - string or domain name detection in URL string
- MAC filtering
- Password protection for system management

## **Quality of Service Control**

- Supports the DiffServ approach
- Traffic prioritization and bandwidth management based on IPv4/IPv6 protocol, port number and address

## **ATM and PPP Protocols**

- Compliant with xDSL standard
- ATM Adaptation Layer Type 5 (AAL5)
- Multiple protocol over AAL5 (RFC 2684, formerly RFC 1483)
- Bridged or routed Ethernet encapsulation
- VC-based and LLC-based multiplexing
- PPP over Ethernet (PPPoE)

- PPP over ATM (RFC 2364)
- Classical IP over ATM (RFC 1577)
- MAC encapsulated routing (RFC 1483 MER)
- OAM F4/F5

## **IPTV Applications**

- IGMP snooping and IGMP proxy
- MLD snooping and MLD proxy
- Bridge Grouping
- Supports VLAN MUX
- Quality of Service (QoS)

## **Wireless LAN**

- Compliant with IEEE 802.11 a/ b/ g/ n/ac standards
- 2.4 GHz and 5GHz frequency range
- Up to 1200 (300+867) Mbps wireless operation rate
- 64 / 128 bits WEP supported for encryption
- WPS (Wi-Fi Protected Setup) for easy setup
- Supports WPS v2
- Wireless Security with WPA-PSK / WPA2-PSK support
- Multiple wireless SSIDs with wireless guest access

## **USB Application Server**

- 3G/4G LTE USB modem
- Storage/NAS: FTP server, Samba server, Printer Server

## **Management**

- Web-based GUI for remote and local management (IPv4/IPv6)
- Firmware upgrade and configuration data upload and download via web-based GUI
- Embedded Telnet server for remote and local management
- Supports SNMP
- Supports DHCP server/client/relay

# Physical Interface

- WLAN antennas: 2 external antennas
- DSL: VDSL/ADSL port
- Ethernet: 4-port 10/100/1000Mbps auto-crossover (MDI / MDI-X) Switch
- EWAN: 1 Gigabit Ethernet port as a WAN interface for broadband connectivity
- USB 2.0 and USB 3.0 for 3G/4G LTE USB modem
- USB 3.0 for storage service and 3G/4G LTE USB modem
- WLAN on/off button
- WPS push button
- Power jack
- Power switch
- Factory default reset button

# Package Contents

- BiPAC 8200AXL-1200 Triple-WAN Wireless-AC 1200Mbps VDSL2/ADSL2+ Firewall Router Router
- User Manual
- RJ-45 UTP Ethernet cable
- Power adapter

## Important note for using this router

Do not use the router in high humidity or high temperatures

Do not use the same power source for the router as other equipment.

Do not open or repair the case yourself. If the router is too hot, turn off the power immediately and have it repaired at a qualified service center.

Avoid using this product and all accessories outdoors

## Warning

Do not use the router in high humidity or high temperatures.

Do not use the same power source for the router as other equipment.

Do not open or repair the case yourself. If the router is too hot, turn off the power immediately and have it repaired at a qualified service center.

Avoid using this product and all accessories outdoors.

Place the router on a stable surface.

Only use the power adapter that comes with the package. Using a different voltage rating power adapter may damage the router.

# Device Description

## The Front LEDs

LED	Status	Meaning
<b>Power</b>	Green	System ready
	Off	Off
<b>DSL</b>	Green	xDSL Showtime Phase
	Green Blinking	xDSL Discovery/Training/Exchange Phase
	Off	No xDSL line connected
<b>WAN</b>	Green	Ethernet Link Up
	Green Blinking	Ethernet Link Up and traffic
	Off	Ethernet Link Down
<b>Internet</b>	Green	Device has a public IP via either static/ DHCP/ or IPCP
	Rapid Green Blinking	IP connected and traffic passing
	Off	IP or PPPoE session is idle and dropped, or DSL not connected
<b>LAN1-4</b>	Green	Ethernet Link Up
	Green Blinking	Ethernet Link Up and traffic
	Off	Ethernet Link Down
<b>2.4G/5G</b>	Green	WiFi is ready for using
	Green Blinking	Data being transmitted/received
	Rapid Green Blinking	There is STAs association connection and traffic
	Off	WiFi is disabled
<b>WPS</b>	Green Blinking	Running WPS Configuration

	Off	WPS Stop
<b>USB1/2</b>	On	USB device connected
	Off	USB device not connected

## The Rear Ports

Port	Meaning
<b>POWER</b>	Connect the supplied Power Adapter to this port.
<b>ON/OFF</b>	Power ON/OFF switch
<b>WLAN</b>	Press and release quickly to enable or disable the 2.4G and 5G Wi-Fi function
<b>WPS</b>	Press and release quickly to enable the WPS function
<b>RESET</b>	The RESET button is designed to achieve two effects: 1. Press and hold it for 2-5 seconds to get FW/firmware upgrade from Billion server when internet is working. 2. Press and hold it for 5 seconds or above to restore to factory default settings.
<b>LAN1~4</b>	Connect a Ethernet cable to one of the LAN ports when connecting to a PC or an office/home network.
<b>Gigabit WAN</b>	Connect to Fibre/ Cable/ xDSL Modem with a RJ-45 cable, for broadband connectivity

<b>DSL</b>	Connect to the xDSL/ telephone network with RJ-11 cable(telephone)
<b>USB(2.0/3.0)</b>	Connect the USB device (Printer, USB storage, 3G/4G LTE USB modem) to the port. <b>Note:</b> USB 2.0 for 3G/4G LTE USB modem only USB 3.0 port for Printer, USB storage, 3G/4G LTE USB modem.

# Basic Installation

The router can be configured through your web browser. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 8 / 7 / 98 / NT / 2000 / XP / Me / Vista, etc. The product provides an easy and user-friendly interface for configuration.

Please check your PC network components. The TCP/IP protocol stack and Ethernet network adapter must be installed. If not, please refer to your Windows-related or other operating system manuals.

There are ways to connect the router, either through an external repeater hub or connect directly to your PCs. However, make sure that your PCs have an Ethernet interface installed properly prior to connecting the router device. You ought to configure your PCs to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. The default IP address of the router is 192.168.1.254 and the subnet mask is 255.255.255.0 (i.e. any attached PC must be in the same subnet, and have an IP address in the range of 192.168.1.1 to 192.168.1.253).

The best and easiest way is to configure the PC to get an IP address automatically from the router using DHCP. If you encounter any problem accessing the router web interface it is advisable to uninstall your firewall program on your PCs, as they can cause problems accessing the IP address of the router. Users should make their own decisions on what is best to protect their network.

Please follow the following steps to configure your PC network environment.

Any TCP/IP capable workstation can be used to communicate with or through this router. To configure other types of workstations, please consult your manufacturer documentation.

# Network Configuration

Configuring a PC in Windows 7/8/10

Go to Start. Click on Control Panel. Then click on Network and Internet.

## Settings of Windows 10

When the Network and Sharing Center window pops up, select and click on Change adapter settings on the left window panel.

Select the Local Area Connection, and right click the icon to select Properties.

## IPv4:

Select Internet Protocol Version 4 (TCP/IPv4) then click Properties.

In the TCP/IPv4 properties window, select the Obtain an IP address automatically and Obtain DNS Server address automatically radio buttons. Then click OK to exit the setting. Click OK again in the Local Area Connection Properties window to apply the new configuration.

## IPv6:

Select Internet Protocol Version 6 (TCP/IPv6) then click Properties

In the TCP/IPv6 properties window, select the Obtain an IPv6 address automatically and Obtain DNS

Server address automatically radio buttons. Then click OK to exit the setting. Click OK again in the Local Area Connection Properties window to apply the new configuration.

# Factory Default Settings

Before configuring your router, you need to settings.

## Web Interface (Username and Password)

Administrator

Username: admin

Password: admin

### **Attention**

If you have forgotten the username and/or password of the router, you can restore the device to its default setting by pressing the Reset Button more than 6 seconds.

## Device LAN IPv4 settings

- IPv4 Address: 192.168.1.254
- Subnet Mask: 255.255.255.0

## DHCP server for IPv4

- DHCP server is enabled
- Start IP Address: 192.168.1.254
- IP pool counts: 100

# Configuration

## Configuration via Web Interface

Open your web browser; enter the IP address of your router, which by default is 192.168.1.254, and click ok or press 'Enter' key on the keyboard, a login prompt window will appear. The default root username and password are "admin" and "admin" respectively.

**Congratulations! You are now successfully logged in to the Firewall Router!**

Once you have logged on to your BiPAC 8200AXL-1200 Router via your web browser, you can begin to set it up according to your requirements. On the configuration homepage, the left navigation pane links you directly to the setup pages, which include:

- **Status** (Summary, WAN, Statistics, Bandwidth Usage, 3G/4G LTE Status, Route, ARP, DHCP, Log)
- **Quick Start** (Quick Start)
- **Configuration** (LAN, Wireless 5G(wl0), Wireless 2.4G(wl1), WAN, System, USB, IP Tunnel, Security, Quality of Service, NAT, Wake On LAN)
- **Advanced Setup** (Routing, DNS, Static ARP, UPnP, Certificate, Multicast, Management, Diagnostics)

# Status

## Device

The page below shows the basic system and WAN connection information.

### Device Status

This page shows the current status and some basic settings of the device.

System	
Device Name	BiPAC 8200AXL
Uptime	13 min
Date/Time	Tue May 15 10:24:06 EEST 2018
Firmware Version	2.53.d16
DSP Version	v135k35B
CPU Usage	0%
Memory Usage	42%
Name Servers	139.175.1.1,8.8.8.8
IPv4 Default Gateway	ppp0
DSL	
Operational Status	G.dmt Annex A,SHOWTIME.
Upstream Speed	928 kbps
Downstream Speed	8000 kbps
LAN Configuration	
IP Address	192.168.1.254
Subnet Mask	255.255.255.0
DHCP Server	Enabled
MAC Address	00:04:ED:19:12:77

WAN Configuration						
Interface	VPI/VCI	Encapsulation	Protocol	IP Address	Gateway	Status

# 3G/4G/LTE Info

This page shows 3G/4G/LTE network and dongle information.

## 3G/4G LTE Status

3G/4G/LTE Status	
Status	3G/4G/LTE Card not found
Signal Strength	0 %
Network Name	N/A
Network Mode	N/A
Card Name	N/A
Card Firmware	N/A
Current TX Bytes / Packets	0 / 0
Current RX Bytes / Packets	0 / 0
Total TX Bytes / Packets	0 / 0
Total RX Bytes / Packets	0 / 0

Refresh

**Status:** The current status of the 3G/4G LTE connection.

**Signal Strength:** The signal strength bar and dBm value indicates the current 3G/4G-LTE signal strength. The front panel 3G/4G LTE Signal Strength LED indicates the signal strength as well.

**Network Name:** The name of the 3G/4G LTE network the router is connecting to.

**Network Mode:** The current operation mode for 3G/4G LTE module, it depends on service provider and card's limitation, GSM or UMTS.

**Card Name:** Given a name for the embedded 3G/4G LTE module.

**Card Firmware:** Current used FW in the 3G/4G LTE module.

**Current Received (RX) /Transmitted (TX) Bytes:** Current Rx/TX (receive/transmit) packets in Byte

**Total Received (RX) /Transmitted (TX) Bytes:** The total Rx/TX (receive/transmit) packets in Byte

**Total Connection Time:** The total of 3G/4G LTE dongle connection time since the 3G/4G LTE is up and running

# AP Neighbor

This page shows all WLAN AP's information around your BiPAC 8200AXL-1200.

## WLAN Site Survey

This page provides tool to scan the wireless network. If any Access Point or IBSS is found, you could choose to connect it manually when client mode is enabled.

# ARP

This section displays the router's ARP (Address Resolution Protocol) Table, which shows the mapping of Internet (IP) addresses to Ethernet (MAC) addresses. This is useful as a quick way of determining the MAC address of the network interface of your PCs to use with the router's **Security – MAC Filtering** function.

## User List

This table shows a list of learned MAC addresses.

IP Address	Flag	MAC Address	Mark
192.168.0.125	Complete	00:1E:8C:42:BD:15	

Refresh

### ARP table

**IP Address:** Shows the IP Address of the device that the MAC address maps to.

**Flag:** Shows the current status of the ARP entries.

- ① Complete: the route resolving is processing well.
- ① M(Marked as permanent entry): the route is permanent.
- ① P (publish entry): publish this route item.

**MAC Address:** Shows the MAC address that is corresponded to the IP address of the device it is mapped to.

**Mark:** Show clearly the SSID (WLAN) the device is in.

# DHCP

The DHCP Table lists the DHCP lease information for all IP addresses assigned by the DHCP server in the device.

## Active DHCP Clients

This table shows the assigned IP address, MAC address and time expired for each DHCP leased client.

Host Name	IP Address	MAC Address	Expired Time (sec)	Mark
-----------	------------	-------------	--------------------	------

**Host Name:** The Host Name of DHCP client

**IP Address:** The IP address which is assigned to the host with this MAC address

**MAC Address:** The MAC Address of internal DHCP client host

**Expires in:** Show the remaining time after registration

**Mark:** Show clearly the SSID (WLAN) the device is in

# System Log

Display system logs accumulated up to the present time. You can trace historical information with this function.

## Log Configuring

System Log	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
System Log Reverse	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
Log Level	Informational ▾
Display Level	Informational ▾
Mode	Local ▾
Server IP Address	<input type="text"/>
Server UDP Port	<input type="text"/>
<input type="button" value="Apply Changes"/>	
Save Log to File	<input type="button" value="Save..."/>
Clear Log	<input type="button" value="Reset"/>

**System Log:** Enable or disable this function.

**System Log Reserve:** Choose if to reverse the order of log item display, with the latest at the top.

**Log level:** Select your log level. The log level allows you to configure which types of events are logged. There are eight log levels from high to low are displayed below:

- ♦ **Emergency** = system is unusable
- ♦ **Alert** = action must be taken immediately
- ♦ **Critical** = critical conditions
- ♦ **Error** = error conditions
- ♦ **Warning** = warning conditions
- ♦ **Notice** = normal but significant conditions
- ♦ **Informational** = information events
- ♦ **Debugging** = debug-level messages

The gateway records all log events at the chosen level and above. For instance, if you set the log level to Critical, all critical, alert, and emergency events are logged, but none of the others are recorded

**Display Level:** Display the log according to the level you set when you view system log. Once you set the display level, the logs of the same or higher priority will be displayed.

**Mode:** Select the mode the system log adopted. Three modes: local, Remote and Both.

- ♦ **Local:** Select this mode to store the logs in the router's local memory.

- ♦ **Remote:** Select this mode to send the log information to a remote log server. Then you must assign the remote log server and port, 514 is often used.
- ♦ **Both:** Logs stored adopting above two ways.

Click **Apply changes** to submit.

**Save Log to File:** Download the log to your local PC.

**Clear Log:** Click to clear the current log from the screen.

**Refresh:** Click to update the system log.

# LAN

A Local Area Network (LAN) is a shared communication system network where many computers are connected. This type of network is area defined and is usually limited to a confined region within a building.

## LAN Interface Settings

This page is used to configure the LAN interface of your Device. Here you may change the setting for IP addresses, subnet mask, etc..

---

<b>Interface Name</b>	br0
<b>IP Address</b>	<input type="text" value="192.168.1.254"/>
<b>Subnet Mask</b>	<input type="text" value="255.255.255.0"/>
<b>IGMP Snooping</b>	<input checked="" type="radio"/> Disabled <input type="radio"/> Enabled
<b>Ethernet to Wireless Blocking</b>	<input checked="" type="radio"/> Disabled <input type="radio"/> Enabled

## DHCP Settings

This page is used to configure DHCP Server and DHCP Relay.

---

<b>DHCP Mode</b>	<input type="radio"/> NONE <input type="radio"/> DHCP Relay <input checked="" type="radio"/> DHCP Server
------------------	--

---

Enable the DHCP Server if you are using this device as a DHCP server. This page lists the IP address pools available to hosts on your LAN. The device distributes numbers in the pool to hosts on your network as they request Internet access.

---

<b>IP Pool Range</b>	<input type="text" value="192.168.0.100"/> - <input type="text" value="192.168.0.199"/> <input type="button" value="Show Client"/>
<b>Max Lease Time</b>	<input type="text" value="86400"/> seconds (-1 indicates an infinite lease)
<b>Domain Name</b>	<input type="text" value="Home"/>
<b>Gateway Address</b>	<input type="text" value="192.168.1.254"/>
<b>DNS option</b>	<input checked="" type="radio"/> Use DNS Relay <input type="radio"/> Set Manually

**IP address:** the IP address of the router. Default is 192.168.1.254.

**Subnet Mask:** the default Subnet mask on the router.

**IGMP Snooping:** Enable or disable the IGMP Snooping function. Without IGMP snooping, multicast traffic is treated in the same manner as broadcast traffic - that is, it is forwarded to all ports. With IGMP snooping, multicast traffic of a group is only forwarded to ports that have members of that group.”

**Ethernet to Wireless Blocking:** When it is enabled, all connected PC on Ethernet port cannot access to any WiFi Client.

**DHCP Mode:** Set to NONE to disable the DHCP Server function. DHCP Server is activated as default.

**IP Pool Range:** Setup IP pool range that will be used for DHCP Server. User can click “Show Client” button to show information for all DHCP Clients.

**Max Lease Time:** Setup lease time for clients, default is 86400s.

**Domain Name:** Enter the domain name for your local area network (optional).

**Gateway Address:** It is the IP that will be assigned and activated as DHCP client’s gateway IP.

**DNS option:** This allows you to assign a DNS Servers to the requesting PC.

**Port Based Filter:** Choose if DHCP server will drop DHCP packet from the designated port.

For example, if LAN3 is selected, PC on LAN3 will not obtain IP from the DHCP server. But PC on this port can be manually set IP.

## Port-Based Filter

This page is used to configure the Port-Based Filtering.

---

**Filter DHCP Discover packet**

LAN1       LAN2       LAN3       LAN4

Wlan-ap\_2.4G

Wlan-ap\_5G

**MAC-Based Assignment:** This page allows DHCP server to release the fixed IP address to specified MAC address always.

## MAC-Based Assignment

This page is used to configure the static IP base on MAC Address. You can assign/delete the static IP. The Host MAC Address, please input a string with hex number. Such as 00-d0-59-c6-12-43. The Assigned IP Address, please input a string with digit. Such as 192.168.1.100 .

---

**MAC Address (xx-xx-xx-xx-xx-xx)**

**Assigned IP Address (xxx.xxx.xxx.xxx)**

### MAC-Based Assignment Table

Edit	MAC Address	Assigned IP Address	Select
------	-------------	---------------------	--------

# WLAN

BiPAC 8200AXL-1200 is a simultaneous dual-band (2.4G and 5G) wireless router supporting 11b/g/n/a/ac wireless standards. It allows multiple wireless users on 2.4G and 5G radio bands to surf the Internet, checking e-mail, watching video, listening to music over the Internet concurrently.

You can choose the optimum radio band wireless connection base on your environment.

## WLAN 2.4GHz / 5GHz

### Basic Settings

This page is used to configure the parameters for WLAN clients which may connect to your Access Point. Here you may change wireless encryption settings as well as wireless network parameters.

### WLAN Basic Settings

This page is used to configure the parameters for WLAN clients which may connect to your Access Point. Here you may change wireless encryption settings as well as wireless network parameters.

---

Disable WLAN Interface	<input type="checkbox"/>
Band	2.4 GHz (B+G+N) ▼
Mode	AP ▼ <span>Multiple AP</span>
SSID	wlan-ap_2.4G
Channel Width	20/40MHz ▼
Control Sideband	Upper ▼
Channel Number	Auto ▼
Radio Power (%)	100% ▼
Associated Clients	Show Active WLAN Clients

Apply Changes

**Disable WLAN Interface:** The WLAN 2.4G/5G function will be disabled when it is checked.

**Band:** Specify the mode for Wireless standard support.

**Mode:** Default is Access Point mode.

**Multiple AP:** This device supports up to 3 external SSIDs which can be used for different service.

**SSID:** Network ID is used for identifying the Wireless LAN.

**Channel Width:** Select channel bandwidth for wireless, bigger bandwidth can get higher link rate. But it also depends on interference of your environment.

**Control Sideband:** This is available for 40MHz. Drop-down menu allows selecting upper sideband or lower sideband.

**Channel Number:** The radio channel number. The permissible channels depend on the Regulatory Domain. The factory default setting is auto channel selection.

**Radio Power:** Specify the transmitting power of your wireless signal.

S: Small / M: Medium / H: High

**Associated Clients:** Here you can view information about the wireless clients.

## Advanced Settings

Here user can set some advanced parameters about wireless.

### WLAN Advanced Settings

These settings are only for more technically advanced users who have a sufficient knowledge about WLAN. These settings should not be changed unless you know what effect the changes will have on your Access Point.

---

Fragment Threshold	<input type="text" value="2346"/>	(256-2346)
RTS Threshold	<input type="text" value="2347"/>	(0-2347)
Beacon Interval	<input type="text" value="100"/>	(20-1024 ms)
Data Rate	<input type="text" value="Auto"/>	
Preamble Type	<input checked="" type="radio"/> Long Preamble	<input type="radio"/> Short Preamble
Broadcast SSID	<input checked="" type="radio"/> Enabled	<input type="radio"/> Disabled
Relay Blocking	<input type="radio"/> Enabled	<input checked="" type="radio"/> Disabled
Protection	<input type="radio"/> Enabled	<input checked="" type="radio"/> Disabled
Aggregation	<input checked="" type="radio"/> Enabled	<input type="radio"/> Disabled
Short GI	<input checked="" type="radio"/> Enabled	<input type="radio"/> Disabled
WMM Support	<input checked="" type="radio"/> Enabled	<input type="radio"/> Disabled

**Fragment Threshold:** A threshold (in bytes) whether the packets will be fragmented and at what size. Packets succeeding the fragmentation threshold of 802.11n WLAN will be split into smaller units suitable for circuit size. While the packets smaller than fragmentation threshold will not be fragmented. Default is 2346, setting the fragmentation too low may result in poor performance.

**RTS Threshold:** Request to Send (RTS) threshold specifies the packet size, when exceeds the size, the RTS/CTS will be triggered. The default setting of 2347(max length) will disable the RTS.

**Beacon Interval:** The amount of time between beacon transmissions in is milliseconds. The default is 100ms and the acceptable is 20- 1024. The beacon transmissions identify the presence of an access point.

**Preamble Type:** Set wireless LAN preamble type to long or short.

**Broadcast SSID:** user can only enter the SSID manually for connecting if **Disabled** box checked.

**Protection:** Turn off for maximized throughput. Turn on for greater security.

**Short GI:** This would provide an 11% increase in data rates once enabled. Using the Short Guard Interval will result in higher packet error rates when the delay spread of the RF channel exceeds the SGI, or if timing synchronization between the transmitter and receiver is not precise.

**WMM Support:** You can choose the enable or disable WMM which allows for priority of certain data over the wireless network.

## Security

Wireless security prevents unauthorized access or damage to computers using wireless network.

### WLAN Security Settings

This page allows you setup the WLAN security. Turn on WEP or WPA by using Encryption Keys could prevent any unauthorized access to your wireless network.

---

SSID Type	<input type="text" value="Root AP - wlan-ap_2.4G"/>
-----------	---

---

Encryption	<input type="text" value="WPA2"/>
Authentication Mode	<input type="radio"/> RADIUS <input checked="" type="radio"/> Pre-Shared Key
IEEE 802.11w	<input type="radio"/> None <input checked="" type="radio"/> Capable <input type="radio"/> Required
SHA256	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
WPA2 Cipher Suite	<input type="checkbox"/> TKIP <input checked="" type="checkbox"/> AES
Group Key Update Timer	<input type="text" value="3600"/>
Pre-Shared Key Format	<input type="text" value="Passphrase"/>
Pre-Shared Key	<input type="text" value="••••••••••••"/> <a href="#">Click here to display</a>

**SSID choice:** Apply the security settings to selected SSID.

**Encryption:** User can select one of the following authentications to secure your wireless network: None, WPA, WPA2 or WPA2 Mixed.

◆ **None**

Encryption	<input type="text" value="NONE"/>
802.1x Authentication	<input type="checkbox"/>

**802.1x Authentication:** If to enable 802.1x authentication.

**RADIUS Server IP Address:** RADIUS( Remote Authentication Dial In User Service), Enter the IP address of RADIUS authentication server.

**RADIUS Server Port:** Enter the port number of RADIUS authentication server here.

**RADIUS Password:** Enter the password of RADIUS authentication server.

◆ WEP

Encryption	<input type="text" value="WEP"/>
802.1x Authentication	<input checked="" type="checkbox"/>
Authentication	<input type="radio"/> Open System <input type="radio"/> Shared Key <input checked="" type="radio"/> Auto
Key Length	<input checked="" type="radio"/> 64 Bits <input type="radio"/> 128 Bits
RADIUS Server IP Address	<input type="text" value="0.0.0.0"/>
RADIUS Server Port	<input type="text" value="1812"/>
RADIUS Server Password	<input type="text"/>

**802.1x Authentication:** If to enable 802.1x authentication.

**Key Length:** 64 Bits or 128 bits.

**RADIUS Server IP Address:** RADIUS( Remote Authentication Dial In User Service), Enter the IP address of RADIUS authentication server.

**RADIUS Server Port:** Enter the port number of RADIUS authentication server here.

**RADIUS Password:** Enter the password of RADIUS authentication server.

◆ WEP

Encryption	<input type="text" value="WEP"/>
802.1x Authentication	<input type="checkbox"/>
Authentication	<input type="radio"/> Open System <input type="radio"/> Shared Key <input checked="" type="radio"/> Auto
Key Length	<input type="text" value="64-bit"/>
Key Format	<input type="text" value="ASCII (5 characters)"/>
Encryption Key	<input type="text" value="*****"/>

**Authentication:** Open, shared key or auto.

**Key Length:** 64 bits or 128 bits.

**Key Format:** ASCII or Hex.

**Encryption Key:** Enter the key to encrypt wireless data.

If you chose **WEP 64-bit**, then enter any 5 ASCII characters or 10 hexadecimal characters (0-9, A-F).

If you chose **WEP 128-bit**, then enter 13 ASCII characters or 26 hexadecimal characters (0-9, A-F).

◆ WPA

Encryption	<input type="text" value="WPA"/>
Authentication Mode	<input type="radio"/> RADIUS <input checked="" type="radio"/> Pre-Shared Key
WPA Cipher Suite:	<input type="checkbox"/> TKIP <input checked="" type="checkbox"/> AES
Group Key Update Timer	<input type="text" value="3600"/>
Pre-Shared Key Format	<input type="text" value="Passphrase"/>
Pre-Shared Key	<input type="text" value="●●●●●●●●●●●●●●"/> <a href="#">Click here to display</a>

**Authentication Mode:** RADIUS and Pre-shared key. If RADIUS, please RADIUS( Remote Authentication Dial In User Service), Enter the IP address, port, password of RADIUS authentication server.

**WPA Cipher Suite:** Specify what cipher suite can be used.

**WPA2 Cipher Suit:** Specify what cipher suite can be used.

**Group Key Update:** The period of renewal time for changing the security key automatically between wireless client and Access Point (AP). This is in seconds.

**Pre-Shared Key:** Enter the key for your wireless security setting. Maximum length is 16 characters.

◆ WPA2/WPA2 Mixed

Encryption	<input type="text" value="WPA2"/>
Authentication Mode	<input type="radio"/> RADIUS <input checked="" type="radio"/> Pre-Shared Key
IEEE 802.11w	<input type="radio"/> None <input checked="" type="radio"/> Capable <input type="radio"/> Required
SHA256	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
WPA2 Cipher Suite	<input type="checkbox"/> TKIP <input checked="" type="checkbox"/> AES
Group Key Update Timer	<input type="text" value="3600"/>
Pre-Shared Key Format	<input type="text" value="Passphrase"/>
Pre-Shared Key	<input type="text" value="●●●●●●●●●●●●●●"/> <a href="#">Click here to display</a>

**Authentication Mode:** RADIUS and Pre-shared key. If RADIUS, please RADIUS( Remote Authentication Dial In User Service), Enter the IP address, port, password of RADIUS authentication server.

**IEEE802.11w:** If to enable IEEE802.11w. IEEE 802.11w is the Protected Management Frames standard

**SHA256:** Whether to enable SHA256 encryption.

**WPA Cipher Suite:** Specify what cipher suite can be used.

**WPA2 Cipher Suit:** Specify what cipher suite can be used.

**Group Key Update:** The period of renewal time for changing the security key automatically between wireless client and Access Point (AP). This is in seconds.

**Pre-Shared Key:** Enter the key for your wireless security setting. Maximum length is 16 characters.

## Access Control

The page helps user to make better security for the wireless network, wireless MAC Filter.

### WLAN Access Control

If you choose 'Allowed Listed', only those WLAN clients whose MAC addresses are in the access control list will be able to connect to your Access Point. When 'Deny Listed' is selected, these WLAN clients on the list will not be able to connect the Access Point.

---

**Mode**

---

**MAC Address**  (ex. 00:E0:86:71:05:02)

**Current Access Control List**

Edit	MAC Address	Select
------	-------------	--------

**Mode:** Select the mode for the action that will apply to the **Current Access Control List**.

**MAC Address:** Enter the WiFi client's MAC address. Enter the **Add** button to add MAC address to the list.

**Reset:** User can click this button to clear MAC address that just entered.

**Delete Selected:** Click the button to delete all selected MAC addresses in the field named **Select**.

**Delete All:** Delete all the MAC address on **Current Access Control List** table.

## Site Survey

The page can help user to find what WiFi channel is used by other AP and find the best channel for you by yourself. Just click **Refresh** button to do WLAN side survey.

### WLAN Site Survey

This page provides tool to scan the wireless network. If any Access Point or IBSS is found, you could choose to connect it manually when client mode is enabled.

SSID	BSSID	Channel	Type	Encryption	Signal
------	-------	---------	------	------------	--------

Refresh

## WPS

WPS (Wi-Fi Protected Setup) feature is a standard protocol created by Wi-Fi Alliance. WPS is used to exchange the AP setting with Station and configure AP settings. This feature greatly simplifies the steps needed to create a Wi-Fi network for a residential or an office setting. The commonly known PIN method is supported to configure WPS.

### Wi-Fi Protected Setup

This page allows you to change the setting for WPS (Wi-Fi Protected Setup). Using this feature could let your WLAN client automatically synchronize its setting and connect to the Access Point in a minute without any hassle.

Disable WPS

WPS Status  Configured  UnConfigured

# WAN

A WAN (Wide Area Network) is a computer network that covers a broad geographical area (eg. Internet) that is used to connect LAN and other types of network systems.

## WAN Mode

The page is used to configure which WAN connection mode will be used or not.

### WAN Mode

This page is used to configure which WAN to use of your Router.

WAN Mode

ATM  Ethernet  PTM

Submit

## Default Routing

This page is used to configure the priority of each WAN connection. Top one has higher priority than lower one. If you have multi-WAN connection available, it will do auto failover and auto fallback according to the priority setting here.

### Default Routing Gateway Priority

Default gateway interface list can have multiple WAN interfaces served as system default gateways but only one will be used according to the priority with the first being the highest and the last one the lowest priority if the WAN interface is connected. Priority order can be changed by up and down them back in again.

4G  
PTM0  
ADSL1  
ADSL2  
EWAN  
ppp0\_vc0

Enable Multi-Path Routing Load Balancing

(All WAN interfaces must have different gateway IP address.)

Apply Changes

# Ethernet WAN

The page is used to configure the parameters and protocol for the Ethernet WAN port. The device offers four popular methods for connecting WAN - Ethernet WAN (broadband) seen below, VDSL, see [PTM \(VDSL\) WAN](#) and ADSL, see [ATM \(ADSL\) WAN](#) and 3G/4G LTE, see [3G/4G LTE Settings](#).

## Ethernet WAN

This page is used to configure the parameters for EthernetWAN

Primary DNS Server	<input type="text"/>
Secondary DNS Server	<input type="text"/>
IP Unnumbered	<input type="checkbox"/>

**WAN Interface:** Select the profile for configuration or new link to create a new profile.

**Enable VLAN:** User can check this box to enable the VLAN on specify profile.

**VLAN ID:** Assign a VLAN ID tag between 0 and 4094

**802.1p\_Mark:** Select an 802.1p priority level between 0 and 7.

**Channel Mode:** Select the channel mode for WAN connection.

**Bridge Mode:** Set bridge mode to make all transparent between Ethernet and WAN or PPPoE packet only.

**Enable NAPT:** Enable/Disable the NAT function for WAN connection.

**Channel:** Enable/Disable the channel.

**Default Route:** Specify the profile will be activated as default gateway for Internet connection or not.

**Enable QoS:** Enable/Disable the QoS for WAN connection.

**MTU:** Most ISP offers MTU value to users.

**Enable IGMP-Proxy:** Enable/Disable the IGMP Proxy. If disabled, the IPTV will not work with NAT enabled mode.

**IP Protocol:** Setup profile's IP protocol to be IPv4 only, IPv6 only or IPv4/IPv6 dual stack.

When **Channel Mode** is set to **IPoE**, you will have the options below.

**Type:** Setup the WAN interface is use static IP or activate as DHCP client and get WAN IP from ISP.

**Local IP Address/Remote IP Address/Subnet Mask:** Enter the IP address, subnet mask and gateway address that provided by your ISP.

**Request DNS:** If this option is enabled, the device will use the DNS Server IP assigned from ISP. It is only work when **Type** is set to **DHCP**.

**Primary DNS Server/Secondary DNS Server:** Input the primary and secondary DNS server if necessary.

When **Channel Mode** is set to **PPPoE**, you will have the options below.

**Username/Password:** Enter the PPPoE username/password that provided by your ISP.

**Type:** Specify the PPP connection should be always on (**Continuous**) or only make connection when necessary (**Connect on Demand**) or manually to make Connect/Disconnect.

**Idle Time (sec):** Specify the idle time for disconnecting the PPPoE connection.

**Authentication Method:** Specify the authentication method for PPPoE connection.

# PTM(VDSL) WAN

Enable Auto-PVC Search

VPI  VCI

Current Auto-PVC Table:

PVC	VPI	VCI
-----	-----	-----

VPI (Virtual Path Identifier) and VCI (Virtual Channel Identifier) define a virtual circuit.

**VPI:** Virtual Path Identifier. The valid range for the VPI is 0 to 255. Enter the VPI assigned to you. This field may already be configured.

**VCI:** Virtual Channel Identifier. The valid range for the VCI is 1 to 65535. Enter the VCI assigned to you. This field may already be configured.

**Encapsulation:** Select in the Mode field, select LLC, VC-Mux.

**Channel Mode:** You can choose 1483 Bridged, 1483 MER, PPPoE, PPPoA, 1483 Routed or 1577 Routed.

**Enable NAPT:** Select it to enable Network Address Port Translation (NAPT) function which allows multiple users to access the Internet through a single IP account by sharing the single IP address. If you do not select it and you want to access the Internet normally, you must add a route on the uplink equipment. Otherwise, the access to the Internet fails. Normally, it is enabled.

**Admin Status:** Activate/Enable or disable the connection.

**Enable QoS:** Enable/Disable the QoS for WAN connection.

**Enable IGMP-Proxy:** Enable/Disable the IGMP Proxy. If disabled, the IPTV will not work with NAT enabled mode.

Now, let's add a PPPoE ADSL connection.

VPI  VCI  QoS

PCR  CDVT  SCR  MBS

Current ATM VC Table

Select	VPI	VCI	QoS	PCR	CDVT	SCR	MBS
<input type="radio"/>	0	33	UBR	6000	0	---	---
<input type="radio"/>	0	100	UBR	6000	0	---	---
<input type="radio"/>	0	35	UBR	6000	0	---	---

The ATM QoS types include CBR (Constant Bit Rate), VBR (Variable Bit Rate) and UBR (Unspecified Bit Rate). These QoS types are all controlled by the parameters specified below, including PCR, SCR and MBS.

Select CBR to specify fixed (always-on) bandwidth for voice or data traffic. Select UBR for applications that are non-time sensitive, such as e-mail. Select VBR for burst traffic and bandwidth sharing with other applications.

**PCR:** Divide the DSL line rate (bps) by 424 (the size of an ATM cell) to find the Peak Cell Rate (PCR). This is the maximum rate at which the sender can send cells.

**CDVT:** CDVT (Cell Delay Variation Tolerance), is often associated with PCR to indicate how much jitter is allowed.

**SCR:** The Sustain Cell Rate (SCR) sets the average cell rate (long-term) that can be transmitted.

**MBS:** Maximum Burst Size (MBS) refers to the maximum number of cells that can be sent at the peak rate. Type the MBS, which is less than 65535

# DSL Settings

This screen allows you to set DSL parameters. DSL knowledge is required to configure these settings. Contact your ISP to make sure that these parameters are correct.

## DSL Settings

This page is used to configure the parameters for the bands of your Device.

---

### DSL Modulation

- G.Lite
- G.Dmt
- T1.413
- ADSL2
- ADSL2+
- VDSL2

### AnnexL Option

(Note: Only ADSL 2 supports AnnexL)

- Enabled

### AnnexM Option

(Note: Only ADSL 2/2+ support AnnexM)

- Enabled

### G.INP Option

- Enabled

### G.Vector Option

- Enabled

### VDSL2 Profile

- 8a
- 8b
- 8c
- 8d

- 12b
- 17a
- 30a
- 35b

### DSL Capability

- Enabled Bitswap
- Enabled SRA

Apply Changes

Please keep these settings as default from ISP, it may make DSL connection broken if set to wrong parameters.

# 3G/4G LTE Settings

3G/4G LTE dongle related settings can be found in this page.

## 3G/4G LTE Settings

This page is used to configure the parameters for your 3G network access.

<b>3G WAN</b>	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
<b>Mode</b>	4G LTE only <input type="button" value="v"/>
<b>Use PPP</b>	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
<b>IPv6 for this service</b>	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
<b>PIN Code</b>	<input type="text"/>
<b>APN</b>	internet
<b>Dial Number</b>	*99#
<b>Authentication</b>	NONE <input type="button" value="v"/>
<b>User Name</b>	<input type="text"/>
<b>Password</b>	<input type="text"/>
<b>Connection Type</b>	Continuous <input type="button" value="v"/>
<b>Keep Alive</b>	<input checked="" type="checkbox"/> Enable <input type="text" value="30"/> seconds [1-86400]
<b>Target Address</b>	8.8.8.8
<b>NAPT</b>	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
<b>Firewall</b>	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
<b>Default Route</b>	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
<b>MTU</b>	1500

**3G/4G LTE WAN:** Enable/Disable the 3G/4G LTE dongle detection function.

**Mode:** There are 6 options of phone service standards: GSM 2G only, UTMS 3G only, GSM 2G preferred, UMTS 3G preferred, Automatic, and Use 3G/LTE 3g dongle settings. If you are uncertain what services are available to you, and then please select Automatic.

**IPv6 for this service:** If to enable IPv6.

**PIN Code:** Enter the PIN code for your SIM card (optional).

**APN:** Enter the APN name if required by your ISP. The default value should work with most ISPs.

**Dial Number:** Enter the dialed number that is provided by your ISP, the default value should work with most ISPs.

**Authentication:** Select the authentication type that is provided by your ISP.

**User Name:** Enter the username that is provided by your ISP (optional).

**Password:** Enter the password that is provided by your ISP (optional).

**Connection:** Default set to Continuous to keep an always-on 3G/4G-LTE connection.

- ♦ **Connect on Demand:** If you want to make UMTS/GPRS call only when there is a packet requesting access to the Internet (i.e. when a program on your computer attempts to access the Internet). In this mode, you must set Idle Timeout value at same time. Click on Connect on Demand, the Idle Timeout field will display.

**Idle Timeout:** Auto-disconnect the broadband firewall gateway when there is no activity on the line for a predetermined period of time. Default is 60 mins.

- ♦ **Continuous:** keep an always-on 3G/4G-LTE connection

**Keep Alive:** Check Enable to allow the router to send message out every 7 seconds (can be changed base on need) to prevent the connection being dropped by ISP.

**IP Address:** The IP address is used to “ping”, and router will ping the IP to find whether the connection is still on.

- ♦ **Manual:** Select this mode if you want to connect manually.

**NAPT:** Enable/Disable the NAT.

**Default Route:** Setup the 3G/4G LTE connection will be used as default gateway or not.

**MTU:** Most ISP offers MTU value to users.

# Services

## DNS

### Dynamic DNS

The Dynamic DNS function allows you to alias a dynamic IP address to a static hostname, allowing users whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your ADSL/VDSL connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP.

Each DDNS Provider has different settings. You will first need to register and establish an account with the Dynamic DNS / No-IP/dy.fi provider using their website, for example <https://dyn.com/dns/>.

### Dynamic DNS Configuration

This page is used to configure the Dynamic DNS address from DynDNS.com, TZO, No-IP or dy.fi. Here you can Add/Remove to configure Dynamic DNS.

---

Enable	<input checked="" type="checkbox"/>
DDNS Provider	DynDNS.com <input type="button" value="v"/>
Hostname	<input type="text"/>
Interface	Any <input type="button" value="v"/>

---

<b>DynDns/No-IP Settings</b>	
User Name	<input type="text"/>
Password	<input type="text"/>

---

<b>TZO/dy.fi Settings</b>	
Email	<input type="text"/>
Key	<input type="text"/>

#### Dynamic DNS Table

Select	State	Hostname	User Name	Service	Status
--------	-------	----------	-----------	---------	--------

**Enable:** Select this check box to activate Dynamic DNS.

**DNS Provider:** Select from drop-down menu for the appropriate service provider, for example: DynDNS.org.

**Hostname:** Type the domain name registered at your Dynamic DNS provider.

**Interface:** The interface applies DDNS, and is associated with the hostname..

## DynDns Settings

**Username:** Your registered name.

**Password:** Your registered password.

## TZO Settings:

**Email:** Your registered email.

**Key:** Your registered key.

Click Add to confirm your DDNS rules.

# Firewall

## ALG

The ALG Controls enable or disable protocols over application layer.

### ALG On-Off Configuration

This page is used to enable/disable ALG services.

#### ALG Type

- |      |   |                               |
|------|---|-------------------------------|
| ftp  | <input checked="" type="radio"/> Enable | <input type="radio"/> Disable |
| h323 | <input checked="" type="radio"/> Enable | <input type="radio"/> Disable |
| rtsp | <input checked="" type="radio"/> Enable | <input type="radio"/> Disable |
| sip  | <input checked="" type="radio"/> Enable | <input type="radio"/> Disable |
| pptp | <input checked="" type="radio"/> Enable | <input type="radio"/> Disable |

Apply Changes

VPN pass-through (L2TP/PPTP) is a feature of routers which allows VPN client on a private network to establish outbound VPNs unhindered.

FTP ALG enabled allows FTP clients behind an NAT to establish a connection on the port of FTP Server.

Enable the H.323/SIP ALG when H.323/SIP SIP phone needs ALG to pass through the NAT. Disable the SIP ALG when H.323/SIP phone includes NAT-Traversal algorithm.

## IP/Port Filtering

### IP/Port Filtering

Entries in this table are used to restrict certain types of data packets through the Gateway. Use of such filters can be helpful in securing or restricting your local network.

- Outgoing Default Action  Deny  Allow
- Incoming Default Action  Deny  Allow

Apply Changes

- |                        |          |             |     |             |   |

#### Current Filter Table

Edit	Direction	Source MAC Address	Destination MAC Address	Rule Action	Select
------	-----------	--------------------	-------------------------	-------------	--------

Delete Selected

Delete All

**Outgoing Default/Incoming Default Action:** Specify the default action for the unmatched traffic in **Current Filter Table**.

**Direction:** Specify the direction of traffic.

**Source MAC/Destination MAC Address:** Enter the information of traffic that will be hooked by filter.

**Rule Action:** Specify what action will be applied to this rule.

**Port Forwarding:** Choose if to enable Port Forwarding feature. And Apply Changes to save the setting.

**Application:** You can select the common application type, for example, **AUTH, FTP** or **TFTP**.

**Enable:** To activate the rule or not.

**Comment:** user-defined description for the rule.

**Local IP/Port:** Set the local IP and port (range) for the application(local server). The local IP is in the same network segment with LAN IP address of the router.

**Protocol:** Choose the transport layer protocol that the service uses. You can choose **TCP, UDP** or **Both**.

**Remote IP/Public Port:** Set the remote/external IP and port (range) for the application.

**WAN Interface:** Choose the WAN interface that will apply virtual server.

Examples of well-known and registered port numbers are shown below. For further information, please see IANA's website at <http://www.iana.org/assignments/port-numbers>

### Well-known and Registered Ports

Port Number	Protocol	Description
21	TCP	FTP Control
22	TCP & UDP	SSH Remote Login Protocol
23	TCP	Telnet
25	TCP	SMTP (Simple Mail Transfer Protocol)
53	TCP & UDP	DNS (Domain Name Server)
69	UDP	TFTP (Trivial File Transfer Protocol)
80	TCP	World Wide Web HTTP
110	TCP	POP3 (Post Office Protocol Version 3)
443	TCP & UDP	HTTPS
1503	TCP	T.120
1720	TCP	H.323
7070	UDP	RealAudio

#### Example: How to setup Port Forwarding for port 21 (FTP server)

If you have a FTP server on your LAN network and want others to access it through WAN.

**Step 1:** Assign a static IP to your local computer that is hosting the FTP server.

**Step 2:** Login to the Gateway to **Virtual Server**.

FTP server uses TCP protocol with port 21.

Enter "21" to Public Port and LAN Port. And specify the external IP. The router will accept port 21 requests from the designated external IP.

Enter the static IP assigned to the local PC that is hosting the FTP server. Ex: 192.168.0.102  
 The router will forward port 21 request to the specific LAN PC (ex:192.168.0.102) in the network.

Comment	Local IP	Local Port		Protocol	Remote IP	Public Port		Interface
FTP Server	192.168.0.102	21	~ 21	TCP <input type="button" value="v"/>	59.104.108.177	21	~ 21	Any <input type="button" value="v"/>
				<input type="button" value="v"/>				Any <input type="button" value="v"/>

# UPnP

UPnP offers peer-to-peer network connectivity for PCs and other network devices, along with control and data transfer between devices. UPnP offers many advantages for users running NAT routers through UPnP NAT Traversal, and on supported systems makes tasks such as port forwarding much easier by letting the application control the required settings, removing the need for the user to control advanced configuration of their device.

## UPnP Configuration

This page is used to configure UPnP. The system acts as a daemon when you enable it and select WAN interface (upstream) that will use UPnP.

---

**UPnP**  Disable  Enable

**WAN Interface**

**UPnP:** Select this checkbox to activate UPnP. Be aware that anyone could use an UPnP application to open the web configuration's login screen without entering the BiPAC 5500N R3's IP address.

**WAN Interface:** The interface UPnP is applied to.

Press **Apply Changes** to apply your settings.

# RIP

Enable this Routing Information protocol for the router to communicate with other rip-enabled devices.

## RIP Configuration

Enable the RIP if you are using this device as a RIP-enabled Device to communicate with others using the Routing Information Protocol. This page is used to select the interfaces on your device that use RIP, and the version of the protocol used.

### Static Route Table

Select	State	Destination	Subnet Mask	Next Hop	Metric	Interface
--------	-------	-------------	-------------	----------	--------	-----------

**Enable:** Checked to enable static route function.

**Destination/Subnet Mask:** Enter the destination IP address and the subnet mask.

**Next Hop:** Specify the gateway IP address for routing to next network.

**Metric:** Metric is a policy for router to commit router, to determine the optimal route. Enter one number greater than or equal to 0.

**Interface:** Select an interface this route associated.

# SNMP

Simple Network Management Protocol (SNMP) is a protocol used for exchanging management information between network devices. SNMP is a member of the TCP/IP protocol suite. The router serves as a SNMP agent that allows a manager station to manage and monitor the router through the network.

## SNMP Configuration

This page is used to configure the SNMP. Here you may change the settings for system description, trap ip address, community name, etc..

<b>SNMP</b>	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
System Description	<input type="text" value="System Description"/>
System Contact	<input type="text" value="System Contact"/>
SystemName	<input type="text" value="BiPAC 8200AXL"/>
System Location	<input type="text" value="System Location"/>
System Object ID	<input type="text" value="1.3.6.1.4.1.16972"/>
Trap IP Address	<input type="text" value="192.168.1.254"/>
Community name (read-only)	<input type="text" value="public"/>
Community name (write-only)	<input type="text" value="public"/>

**Enable SNMP:** Enable to activate SNMP function.

**System Description:** User-defined system description.

**System Name:** User-defined system name.

**System location:** User-set location.

**Trap IP Address:** Enter the IP of the server receiving the trap message (when some exception occurs) sent by this SNMP agent.

**Community name(read-only):** Type the Get Community, which is the password for the incoming Get-and-GetNext requests from the management station.

**Community name(write-only):** Type the Set Community, which is the password for incoming Set requests from the management station.

# Bridge Grouping

Bridge/Interface grouping is a function to group interfaces, known as VLAN. A Virtual LAN, is a group of hosts with the common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of the physical location. Each group will perform as an independent network.

## Configuration

To manipulate a mapping group:

1. Select a group from the table.
2. Select interfaces from the available/grouped interface list and add it to the grouped/available interface list using the arrow buttons to manipulate the required mapping of the ports.
3. Click 'Apply Changes' button to save the changes.

Note that the selected interfaces will be removed from their existing groups and added to the new group.

---

**Grouped Interfaces**

IP QoS  Disable  Enable

#### QoS Queue Config

This page is used to configure the QoS policy and Queue. If select PRIO of policy, the lower numbers imply greater precedence. If select WRR of policy, please input the weight of this queue. Default is 40:30:20:10. After configuration, please click 'Apply Changes'

Policy  PRIO  WRR

Queue	Policy	Priority	Weight	Enable
Q1	PRIO	1	--	<input type="checkbox"/>
Q2	PRIO	2	--	<input type="checkbox"/>
Q3	PRIO	3	--	<input type="checkbox"/>
Q4	PRIO	4	--	<input type="checkbox"/>

#### QoS Bandwidth Config

This part is used to configure the bandwidth of different type of WAN. If select Disable, CPE will select the appropriate bandwidth based on WAN. If select Enable, User is allowed to configure specific bandwidth of WAN.

User Defined Bandwidth  Disable  Enable

Total Bandwidth Limit:  
 kb

**IP QoS:** Enable/Disable the IP QoS function.

**Policy:** Specify the policy for queue.

**Policy:** The Queue Scheduling Algorithm, here supporting WRR (Weighted Round Robin) and PRIO (Priority).

- WRR: Weighted Round Robin, used to alternate each WRR queue to ensure that every queue can enjoy its due service time (resource) in accordance with its weight.
- PRIO: Strict Priority; it always sends the packets in queue with higher priority, and under this circumstance, the packets in lowest-priority queue may be delayed for quite a long time.

**Total Bandwidth Limit:** Specify the bandwidth of your WAN connection.

## QoS Classification

### QoS Classification

This page is used to add or delete classification rule.

(After add a new rule, please click 'Apply Changes' to take effect.)

		Mark			Classification Rules					
ID	Name	Order	DSCP Mark	802.1p	Queue	WanIf	Rule Detail	Delete	Edit	State

Click the **Add** button to add QoS rule.

### Add QoS Classification Rules

This page is used to add a IP QoS classification rule.

Rule Name	<input type="text" value="rule_"/>
Rule Order	<input type="text"/>
Precedence	<input type="text" value="Queue 1"/> ▼
DSCP	<input type="text"/> ▼
802.1p	<input type="text"/> ▼
IP QoS Rule by type	<input type="radio"/> Port <input type="radio"/> Ethery Type <input type="radio"/> IP/Protocol <input type="radio"/> MAC Address
WAN	<input type="text" value="Any"/> ▼

**Rule Name:** Enter the rule name.

**Rule Order:** Rule Index.

**Precedence:** Specify which Queue the packets matching the QoS conditions are to be classified into.

Please notice that only when the packet fulfill every detailed conditions set below, then this packet will be remarked as the priority queue of each rule.

**DSCP:** Select the DSCP mark to be a QoS classification condition.

**802.1p:** Specify the 802.1p value.

**WAN:** Specify which WAN interface will be applied.

**IP QoS Rule by type:** Select the type which will be used to hook the traffic for applying the QoS rule.

◆ **Port**

**Physical Port**

**Physical Port:** LAN ports to be monitored.

◆ **Ethery Type**

**Ethernet Type**                      0x

**Ethernet Type:** EtherType is a two-octet field in an Ethernet frame. It is used to indicate which protocol is encapsulated in the payload of the frame. Specify the Ethernet Type of packets to be monitored.

◆ **IP/Protocol**

<b>Protocol</b>	<input type="text"/>	▼
<b>DSCP</b>	<input type="text"/>	▼
<b>Source IP</b>	<input type="text"/>	
<b>Source Mask</b>	<input type="text"/>	
<b>Destination IP</b>	<input type="text"/>	
<b>Destination Mask</b>	<input type="text"/>	
<b>Source Port</b>	<input type="text"/>	<input type="text"/>
<b>Destination Port</b>	<input type="text"/>	<input type="text"/>

**Source IP/Port:** The source IP/Port of packets to be monitored.

**Destination IP/Port:** The destination IP/Port of packets to be monitored.

◆ **MAC Address**

<b>Source MAC</b>	<input type="text"/>
<b>Destination MAC</b>	<input type="text"/>

**Source/Destination MAC:** The Source/Destination MAC of packets to be monitored.

# Printer Server

The page shows the printer URL when printer is connectd to device via USB.

The Print Server feature allows you to share a printer on your network by connecting a USB cable from your printer to the USB port on the BiPAC 8200AXL-1200. This allows you to print from any location on your network.

**Note:** Only USB printers are supported

Setup of the printer is a 2 step process

1. Connect the printer to the router 's USB port
2. Install the printer drivers on the PC you want to print from

## Printer URL(s)

This page is used to show printer URL(s).

---

<http://192.168.1.254:631/printers/lp0>

Refresh

### Printer installation on Windows 10

1. Go to Settings -> Add printer & scanners, then click *Add a printer or scanner*.

2. Select “Select a shared printer by name”, copy the printer URL that shows on device WEB GUI (Advanced -> Printer) and past it here.

3. Click *Next* button and follow the instruction by Windows 10.

# IPv6

## IPv6

### IPv6 Configuration

This page be used to configure IPv6 enable/disable

---

IPv6

Disable  Enable

Apply Changes

**IPv6:** Enable or Disable the IPv6 function.

## RADVD

### RADVD Configuration

This page is used to setup the RADVD's configuration of your Device.

---

MaxRtrAdvInterval	<input type="text" value="600"/>
MinRtrAdvInterval	<input type="text" value="198"/>
AdvManagedFlag	<input checked="" type="radio"/> off <input type="radio"/> on
AdvOtherConfigFlag	<input type="radio"/> off <input checked="" type="radio"/> on

Apply Changes

**MaxRtrAdvInterval:** The maximum time allowed between sending unsolicited multicast router advertisements from the interface, in seconds. It Must be no less than 4 seconds and no greater than 1800 seconds.

**MinRtrAdvInterval:** The minimum time allowed between sending unsolicited multicast router advertisements from the interface, in seconds. Must be no less than 3 seconds and no greater than  $0.75 * \text{MaxRtrAdvInterval}$ .

**AdvManagedFlag:** When set, hosts use the administered (stateful) protocol for address autoconfiguration in addition to any addresses autoconfigured using stateless address autoconfiguration.

**AdvOtherConfigFlag:** When set, hosts use the administered (stateful) protocol for autoconfiguration of other (non-address) information.

## DHCPv6

### DHCPv6 Settings

This page is used to configure DHCPv6 Server and DHCPv6 Relay.

---

DHCPv6 Mode

NONE  
 DHCP Relay  
 DHCP Server(Manual)  
 DHCP Server(Auto)

---

Auto Config by Prefix Delegation for DHCPv6 Server.

**DHCPv6 Mode:** Set to **DHCP Server(Auto)** to assign the IPv6 address to all LAN clients or set to **NONE** to disable it.

## MLD Proxy

The MLD Proxy feature provides a mechanism for a device to generate MLD membership reports for all entries or a user-defined subset of these entries on the device's upstream interface. The MLD proxy feature enables a device to learn proxy group membership information, and forward multicast packets based upon that information.

### MLD Proxy Configuration

This page be used to configure MLD Proxy.

---

MLD Proxy  Disable  Enable

WAN Interface

**MLD Proxy:** Enable or disable the MLD Proxy function.

**WAN Interface:** Set the upstream interface for MLD Proxy. The WAN interface must has IPv6 enabled for showing here.

## MLD Snooping

Similar to IGMP snooping, listens in on the MLD conversation between hosts and routers by processing MLD packets sent in a multicast network, and it analyzes all MLD packets between hosts and the connected multicast routers in the network. Without MLD snooping, multicast traffic is treated in the same manner as broadcast traffic - that is, it is forwarded to all ports. With MLD snooping, multicast traffic of a group is only forwarded to ports that have members of that group.

## MLD Snooping Configuration

This page be used to configure MLD Snooping.

MLD Snooping  Disable  Enable

Apply Changes

**MLD Snooping:** Enable or disable the MLD Snooping function.

## IPv6 Routing

### IPv6 Static Routing Configuration

This page is used to configure the IPv6 static routing information. Here you can add/delete static IP routes.

Enable   
Destination   
Next Hop   
Metric   
Interface

Add Route Update Delete Selected Delete All Show Routes

Static IPv6 Route Table

Select	State	Destination	Next Hop	Metric	Interface
--------	-------	-------------	----------	--------	-----------

**Enable:** Checked to enable static route function.

**Destination:** Enter the destination IPv6 address.

**Next Hop:** Specify the gateway IPv6 address for routing to next network.

**Metric:** Metric is a policy for router to commit router, to determine the optimal route. Enter one number greater than or equal to 0.

**Interface:** Select an interface this route associated.

## IP/Port Filtering

### IPv6 IP/Port Filtering

Entries in this table are used to restrict certain types of data packets through the Gateway. Use of such filters can be helpful in securing or restricting your local network.

---

Outgoing Default Action  Deny  Allow  
Incoming Default Action  Deny  Allow

---

Direction   
Protocol   
Rule Action  Deny  Allow  
Source Interface ID   
Destination Interface ID   
Source Port  -   
Destination Port  -

---

#### Current Filter Table

Edit	Direction	Protocol	Source Interface ID	Source Port	Destination Interface ID	Destination Port	Rule Action	Select
------	-----------	----------	---------------------	-------------	--------------------------	------------------	-------------	--------

**Outgoing Default/Incoming Default Action:** Specify the default action for the unmatched traffic in **Current Filter Table**.

**Direction:** Specify the direction of traffic.

**Protocol:** Specify the protocol of traffic.

**Rule Action:** Specify what action will be applied to this rule.

**Source Interface ID/Destination Interface ID:** Enter the information of traffic that will be hooked by filter.

**Source/Destination Port:** Enter the port information of traffic that will be hooked by filter.

# Diagnostics

## Ping

This page will help you to diagnostic the status of your Network. You can use “Ping” methods in this page. After you input the IP address, click **Go** button.

### Ping Diagnostics

This page is used to send ICMP ECHO\_REQUEST packets to network host. The diagnostic result will then be displayed.

Host Address

Go

**Host:** Enter your host IP/domain name to ping to test the connectivity between the host and your router.

**PING 8.8.8.8 (8.8.8.8): 56 data bytes**

64 bytes from 8.8.8.8: icmp\_seq=0

64 bytes from 8.8.8.8: icmp\_seq=1

64 bytes from 8.8.8.8: icmp\_seq=2

--- ping statistics ---

3 packets transmitted, 3 packets received.

Back

# ATM Loopback

The router is equipped to perform connectivity verification by the use of the ATM OAM loopback capability for both VP and VC connections. This page is used to perform the VCC loopback function to check the connectivity of the VCC.

## ATM Loopback Diagnostics - Connectivity Verification

Connectivity verification is supported by the use of the ATM OAM loopback capability for both VP and VC connections. This page is used to perform the VCC loopback function to check the connectivity of the VCC.

Select PVC

0/33  0/100  0/35

Flow Type

F4 Segment  F4 End-to-End

F5 Segment  F5 End-to-End

Loopback Location ID

FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF

Go |

# DSL Tone

The frequency band of ADSL is split up into 256 separate tones, each spaced 4.3125 kHz apart.

With each tone carrying separate data, the technique operates as if 256 separate modems were running in parallel. The tone range is from 0 to 31 for upstream and from 32 to 255 for downstream.

## DSL Tone Diagnostics

DSL Tone Diagnostics. Only ADSL2/ADSL2+/VDSL2 support this function.

Start

	Downstream	Upstream
Hlin Scale		
Loop Attenuation(dB)		
Signal Attenuation(dB)		
SNR Margin(dB)		
Attainable Rate(Kbps)		
Output Power(dBm)		

Tone Number	H.Real	H.Image	SNR	QLN	Hlog
0					
1					
2					
3					
4					
5					
6					
7					

# ADSL Connection

The router is capable of testing your WAN connection. Run Diagnostic Test to proceed.

## ADSL Connection Diagnostics

The Device is capable of testing your connection. The individual tests are listed below. If a test displays a fail status, click 'Go' button again to make sure the fail status is consistent.

Select the ADSL Connection

Select the ADSL Connection

### ADSL Connection Check

Test ADSL Synchronization	PASS
Test ATM OAM F5 Segment Loopback	FAIL
Test ATM OAM F5 End-to-end Loopback	FAIL
Test ATM OAM F4 Segment Loopback	FAIL
Test ATM OAM F4 End-to-end Loopback	FAIL

### Internet Connection Check

Test PPP Server Connection	PASS
Test Authentication with ISP	PASS
Test the assigned IP Address	PASS
Ping Default Gateway	PASS
Ping Primary Domain Name Server	PASS

# Management

This page allows user to reboot your device. All services will be terminated during rebooting.

## Backup/Restore

This page allows user to backup or restore the router settings to/from file.

### Backup and Restore Settings

This page allows you to backup current settings to a file or restore the settings from the file which was saved previously. Besides, you could reset the current settings to factory default.

---

Backup Settings to File

Backup...

Restore Settings from File

Choose File

No file chosen

Restore

Reset Settings to Default

Reset

Click **Backup**, a window appears, click save, and then browse the location where you want to save the backup file

Click **Choose File**. Browse and Select the backup file. Then in the above page, click **Restore**.

**Reset Settings to Default:** Press Reset button to restart the device with factory default settings.

# Password

The administrator password can be changed by this page. Suggest to change default password for better security protection.

## Password Configuration

This page is used to set the account to access the web server of your Device. Empty user name and password will disable the protection.

---

User Name	<input type="text" value="hallinta"/>
Old Password	<input type="password"/>
New Password	<input type="password"/>
Confirmed Password	<input type="password"/>

**Old Password:** The old password for the user.

**New Password:** Enter new password.

**Confirm Password:** Enter new password again for confirmation.

# Firmware Upgrade

The firmware keeps enhancement and improvement. This page allows user to upgrade to a new firmware once it is available.

Clicking “**Upgrade(auto)**” button will upgrade the up to date firmware from remote server, please make sure the Internet connection is work before clicking.

## Firmware Upgrade

This page allows you upgrade the firmware to the newer version. Please note that do not power off the device during the upload because this make the system unbootable.

---

Upload firmware with default configuration

No file chosen

**Important Note:** Please don't power off the router during upgrade, otherwise it may damage your router.

# ACL

This page allows user to allow/block access to the router's service with specified IP address or network on both LAN and WAN direction.

## ACL Configuration

This page is used to configure the IP Address for Access Control List. If ACL is enabled, only the IP address in the ACL Table can access CPE. Here you can add/delete the IP Address.

ACL Capability  Disable  Enable

---

Enable

Interface

IP Address

Subnet Mask

Service Name **LAN**

Any

TELNET

FTP

TFTP

HTTP

HTTPS

SNMP

PING

ACL Table

Edit	State	Interface	IP Address	Services	Port	Select
<input type="checkbox"/>	Enable	LAN	0.0.0.0/0	web,https,ping	80,443	<input type="checkbox"/>
<input type="checkbox"/>	Enable	WAN	0.0.0.0/0	web,https,ping	80,443	<input type="checkbox"/>

**ACL Capability:** The router's all service will be opened and can be accessed by any direction if set to disable. Default is enable. Press **Apply Changes** to save the changes.

**Enable:** To activate the ACL Rule.

**Interface:** LAN or WAN, to determine the rule is workable for LAN or WAN.

**IP Address/Subnet Mask:** The IP or IP range to be monitored. 0.0.0.0 means any IP.

**Services Name:** List all services to be monitored. Choose a service or services that you want to give access to all the secure IP clients.

Click **Add** to add the ACL rule to the ACL Table. **Note:** If ACL is enabled, only the IP address in the ACL Table can access CPE.

**Example** on how to configure ACL, Here we are going to establish two frequently used rules to illustrate.

1. Set up a rule to allow only clients from LAN to have access to all embedded applications (HTTP, HTTPS, Ping, etc). Under this situation, clients from WAN cannot access the router even from Ping. Click Add to add rule.

Enable  
 Interface: LAN  
 IP Address: 0.0.0.0  
 Subnet Mask: 0.0.0.0

**Service Name**      **LAN**  
 Any   
 TELNET   
 FTP   
 TFTP   
 HTTP   
 HTTPS   
 SNMP   
 PING

ACL Table

Edit	State	Interface	IP Address	Services	Port	Select
<input type="radio"/>	Enable	LAN	0.0.0.0/0	web,https,ping	80,443	<input type="checkbox"/>

2. An ACL rule to open Ping to WAN side. Click Add to add rule.

Enable  
 Interface: WAN  
 IP Address: 0.0.0.0  
 Subnet Mask: 0.0.0.0

**Service Name**      **WAN**      **WAN Port**  
 TELNET  23  
 FTP  21  
 TFTP   
 HTTP  80  
 HTTPS  443  
 SNMP   
 PING

ACL Table

Edit	State	Interface	IP Address	Services	Port	Select
<input type="radio"/>	Enable	LAN	0.0.0.0/0	web,https,ping	80,443	<input type="checkbox"/>
<input checked="" type="radio"/>	Enable	WAN	0.0.0.0/0	ping		<input type="checkbox"/>

# Time Zone

Setup the Time Zone and NTP server here to correct and sync the time on the router.

## Time Zone Configuration

You can maintain the system time by synchronizing with a public time server over the Internet.

Time Zone Select	<input type="text" value="Europe/Helsinki (UTC+02:00)"/>
Enable Daylight Saving Time	<input checked="" type="checkbox"/>
Enable SNTP Client Update	<input checked="" type="checkbox"/>
WAN Interface	<input type="text" value="Any"/>
SNTP Server	<input checked="" type="radio"/> <input type="text" value="130.149.17.8 - Europe"/>
	<input type="radio"/> <input type="text" value="220.130.158.52"/> (Manual Setting)

# SMS Alert Settings

SMS, Short Message Service, is to inform clients the information clients subscribe. BiPAC 8200AXL-1200 offers SMS alert sending clients alert messages when a default route change is detected.

## SMS Alert Settings

This page is used to configure the parameters for your SMS alert.

Default Route Change Alert	
Recipient's Number	<input type="text"/>

**Recipient's Number (Default Route Change Alert):** Enter the Recipient's number that will receive the alert message when a default route change is detected.

# Statistics

## Interface

This page shows the statistics (Receive/Transmit packets, Receive/Transmit errors, Receive/Transmit drops) of each interface. Click **Reset Statistics** button to reset counter.

### Interface Statistics

This page shows the packet statistics for transmission and reception regarding to network interface.

Interface	Rx pkt	Rx err	Rx drop	Tx pkt	Tx err	Tx drop
LAN1	0	0	0	0	0	0
LAN2	3665	0	0	1782	0	0
LAN3	0	0	0	0	0	0
LAN4	0	0	0	0	0	0

# Reboot

Click the **Commit and Reboot** button to reboot the device immediately with the current settings.

## Commit and Reboot

This page is used to commit changes to system memory and reboot your system.

---

Commit and Reboot

# Logout

This page will force the user logout immediately by clicking Logout button. Simultaneous access to the router is not allowed. One user at a time

## Logout

This page is used to logout from the Device.

---

Logout

# Troubleshooting

If your router is not functioning properly, please refer to the suggested solutions provided in this chapter. If your problems persist or the suggested solutions do not meet your needs, please kindly contact your service provider or Billion for support.

## Problems with the router

Problem	Suggested Action
None of the LEDs is on when you turn on the router	Check the connection between the router and the adapter. If the problem persists, most likely it is due to the malfunction of your hardware. Please contact your service provider or Billion for technical support.
You have forgotten your login username or password	Try the default username "admin" and password "admin". If this fails, you can restore your router to its factory settings by pressing the reset button on the device rear side.

## Problems with WAN interface

Problem	Suggested Action
Frequent loss of ADSL line sync (disconnections)	Ensure that all other devices connected to the same telephone line as your router (e.g. telephones, fax machines, analogue modems) have a line filter connected between them and the wall socket (unless you are using a Central Splitter or Central Filter installed by a qualified and licensed electrician), and ensure that all line filters are correctly installed and the right way around. Missing line filters or line filters installed the wrong way around can cause problems with your ADSL connection, including causing frequent disconnections. If you have a back-to-base alarm system you should contact your security provider for a technician to make any necessary changes.

## Problem with LAN interface

Problem	Suggested Action
Cannot PING any PC on LAN	Check the Ethernet LEDs on the front panel. The LED should be on for the port that has a PC connected. If it does not lit, check to see if the cable between your router and the PC is properly connected. Make sure you have first uninstalled your firewall program before troubleshooting
	Verify that the IP address and the subnet mask are consistent for both the router and the workstations.

# Appendix: Product Support & Contact

If you come across any problems please contact the dealer from where you purchased your product.

## **Federal Communication Commission Interference Statement**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ◆ Reorient or relocate the receiving antenna.
- ◆ Increase the separation between the equipment and receiver.
- ◆ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- ◆ Consult the dealer or an experienced radio/TV technician for help.

## **FCC Caution:**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference

(2) This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. . This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

## **Co-location statement**

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

## **FCC Radiation Exposure Statement**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
